

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

#### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

#### **About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

### REPORT

OF THE

### SANITARY COMMISSIONER FOR BOMBAY

FOR THE YEAR 1871.

#### PREFATORY.

With Government Resolution in the General Department No. 2042, dated 26th July 1871, there was forwarded a general review by the Sanitary Commissioner with the Government of India of the Annual Reports for 1869, by the local Sanitary Commissioners, and in para. 87 of this review, or letter No. 309, ated 25th May 1871, there were given the following sections under which future reports should be drawn up:—

#### I.—THE VITAL STATISTICS OF THE PROVINCE.

The annual statements should be according to the Standard Forms, from which no deviation whatever should be made. If the population to whom Registration has been extended does not embrace the whole population of the Province, the fact should be mentioned in a foot-note, and any discrepancy in the numbers of the whole Province, or of any District, as compared with those of the year previous, should be explained.

The figures should be punctuated by millions and not by lakhs.

Any statistics regarding Births and Marriages should be shown in separate statements from the Mortuary Tables.

Any measures for improving the Registration which have been adopted during the year should be noted, and how far any improvement has been effected.

#### II .- HISTORY OF THE CHIEF DISEASES DURING THE YEAR.

- (a.)—Cholera.
- (b.)—Small-pox.
- (c.)—Fevers.
- (d.)—Bowel Complaints.
- (e.)—Injuries.

With regard to each of them the facts should first be stated, and then the opinions, if any, which have been based on them.

1 s R

Digitized by Google

#### III .- THE METEOROLOGY OF THE YEAR.

- The main features of the year should be shortly noticed, and any connection they appear to have had with its sanitary history discussed. The monthly rain-fall and temperature in particular should be compared with the monthly statistics of disease in each District, from which such data can be procured.
- The daily rain-fall and daily register of other meteorological phenomena in connection with the prevalence of epidemics are of much importance.
- IV.—The Food supply of the People, as affected by the out-turn of the crops, the rate of wages, and the prices of grain, and such information should, as far as possible, be given for separate districts, in relation to the comparative mortality in each.

#### V.—A RECORD OF PERSONAL PROCEEDINGS.

- This should include a note of the various places visited during the year, although the special reports on each need not always be printed. The dates of such inspections should always be given for future reference. In connection with this point, I would observe that those tracts of country should generally be selected for inspection which have suffered from any unusual sickness in the preceding season, and an attempt should be made to investigate its causes on the spot.
- It may be urged that the Sanitary Commissioners are too much occupied with the supervision of Registration to be able to leave their head quarters for any length of time, but they can do much more to secure efficient Registration by moving about the country than by any other means. They can interest District Officers and others concerned in the work, and can satisfy themselves as to the manner in which the Registers are kept. The mere prospect of their visit will stir up the Registrars to greater attention. And with all this advantage gained they can also do much to become acquainted with the country and with the people, and to enlighten them in the benefits of sanitary reforms. The details of compilation must be done by the Office Establishment, and the results checked here and there.

Under this head also mention may be made of any special reports, which have been submitted during the year.

#### VI.—Sanitary Progress.

This should be a record of any progress that has been made in the year not only as regards the projection or excution of any great engineering works, but also, as it concerns reforms of a minor nature, any means taken to instruct the people in their value, and any sign that advance has been made in this direction.

And in offering their remarks and opinions on these different heads, and on any other matters which deserve notice, the Sanitary Commissioners should abstain from criticizing the views of other Officers in the same Department. The fullest and freest discussion may be carried on with regard to any theoretical opinions, and the facts of the year may be considered in the light of these opinions without imparting to the discussion anything of a controversial nature, and without endeavouring to show that the views advanced by other Sanitary Commissioners are erroneous or calculated to do mischief.

The reports should be submitted at a much earlier date than heretofore.

Each report should be accompanied with a complete table of contents, and with a clear Map of the Province in which the geographical distribution of cholera, and its relative fatality in different places, should be distinctly shown.

Such are the instructions, and they have been followed, as far as possible, in compiling this Report for the year 1871.

### SECTION I.

THE VITAL STATISTICS OF THE PROVINCE.

#### SECTION I.

### VITAL STATISTICS.

A report upon the Vital Statistics of the Presidency ought to be prefaced by an outline of the descriptive and physical geography of the Presidency itself—and it was my intention to have given it district by district, but, in casting about for the necessary materials, the difficulties which were met on all sides have proved to be insurmountable. There is such a want of attested data, the maps are so fragmentary, and records are so scanty, and so imperfect, that I am convinced the idea must be abandoned or at any rate postponed, perhaps indefinitely.

- 2. In the hope of obtaining the most recent and reliable information connected with coast line, boundaries, altitudes, &c., I wrote to the Surveyor General of India, who very kindly sent me a skeleton map from which might be prepared one, a special one, for the Presidency, but, with it, he wrote as follows:—
- "2. For the geographical and statistical data you require I beg to refer you"

  Letter No. 1683, dated December 16, 1871. "to the Bombay Government, and the Quartermaster"

  "General of your own Presidency, as this office has"

  "never been furnished with a single scrap of the information you require for the"

  "past 30 or 40 years, and, from the entire absence of trustworthy maps of that"

  "Presidency, is not in a position to render it, or to assist you in the compilation"

  "of such a map yourself."
- "3. The utter destitution of geographical information for the Bombay"
  "Presidency has formed the subject of much correspondence for a considerable"
  "time past, and Imperial Survey parties are now just starting in the Northern"
  "Division with the view of delineating the country and filling up the sheets of"
  "the Atlas of India."
- "4. I may further state for your information, that, from a long study of "
  "the subject, I am quite certain any attempt at present at a proper map of the "
  "entire Presidency must prove quite futile, whether in the hands of the con-"
  "stituted Geographical Department, or of other persons."
- 3. From this letter it must not be inferred that there are no good Revenue maps—for there are—for revenue purposes they are perhaps perfect, but there they stop, and, as I have said, they are fragmentary, that is, there is no one map which gives even the districts and sub-districts with their respective boundaries; there is nothing to show at a glance the general relative positions of the great centres

of life, and commerce, and cultivation, or their bearings with regard to our military stations, and the main lines of communication by land or water. There may be information upon these and other points, but if it does exist it has yet to be collected, and physical data have yet to be supplied, so, under these circumstances, all figures and measurements relating to areas must be taken as mere approximations.

- 4. It may be thought that, with regard to total area, necessarily a fixed quantity, there could be no difficulty, and yet different authorities give different results, although all claim official, or quasi-official, sources for their tables.
- 5. The following is from Thornton's Gazetteer for 1862, and I have added a column to show the density of population:—

		a square iles.	Popu	lation.	Population square n	
Surat Broach Ahmedabad Kaira Khandeish Tanna or Northern Concan Poona Ahmednuggur, including the Sub- Collectorate of Nassick Sholapoor Belgaum Dharwar Rutnagherry or Southern Concan Bombay Island, including Colaba Colaba Territory Sattara	1,319 4,356 1,869 9,911 5,477 5,298 9,931 4,991 5,405 3,837	67,945	492,684 290,984 650,223 580,631 778,112 815,849 666,006 995,585 675,115 1,025,882 754,385 665,238 566,119 58,721 1,005,771	10,021,305	302·4 220·6 149·3 310·6 83·5 148·9 125·7 100·2 185·2 189·8 196·6 167·8 31,451·0 184·6 98·4	147:5

#### SUMMARY.

	Area in square miles.	Population.	Population per equare mile.
Bombay	75,806 63,599 60,650	10, <b>26</b> 5,736 1,768,737 <b>4,</b> 469,925	135·4 27·8 73·7
Total	200,055	16,504,398	82.5

8. The Statesman's Year book for the current year is said to be compiled from the official returns of 1871, and, at page 638, there is the following Table:—

Area in square miles.	Population.	Population per square mile.
87,689	11,093,512	126.5
•		33.0
<b>72</b> ,07 <b>6</b>	6,552,170	90.9
214,168	19,441,276	90.8
	miles. 87,689 54,403 72,076	87,689 11,093,512 54,403 1,795,594 72,076 6,552,170

9. To facilitate comparison these Tables are now given together:-

		Area in s	quare miles.			
			人			
	Bombay.	Sind.	Native States.	Total.	Population.	Population per sq. mil
Thornton	69,945	62,120	60,650	180,715	15,578,592	86.2
Murray	75,806	63,599	60,650	200,055	16,504,398	82.5
Year book	87,689	54,403	72,076	214,168	19,441,276	90.8

- 10. By the last Table the total area is greater than that of the Germany or France of 1871, and the population exceeds that of Spain by some 3 millions; it differs too from Thornton by an area exceeding that of all Ireland, and by a population greater than that of Scotland.
- 11. The areas given by the Quarter Master General of the Army differ from those already quoted, differ both in detail, and collectively.

Deccan—Bombay portion	54,286	
North Concan	3,495	
South Concan	3,964	
Guzerat, without Kutch and Kattywar	26,896	•
		88,641
Sind	•••	60,240
Kutch	6,500	
Kutch Runn	9,000	
Kattywar	22,000	
		37,500
	Total	186,381

- 12. According to the same authority the Presidency extends from N. Latitude 14° to 30° and it lies between E. Long. 66° and 76°. It has an average breadth of about 350 miles, and a length of 1,000, whilst the coast line is 1,300.
- 13. In so vast a territory, as might be expected, there are great diversities of aspect, of climate, of condition—there are whole districts which are one large garden, and there are trackless wastes where the very absence of life is oppressive—

there are places where the rain-fall may be marked by feet, there are others where cents would measure it. The people, too, are of many races, and many creeds, and they present the extremes of contrast: there is met a kindness of which the most winning feature is its simplicity, and there is a heartless cruelty that makes one shudder.

- 14. For fiscal purposes the Presidency is divided into certain districts, and for purposes of mortuary registration, the want of a separate and special agency has necessitated the adoption of these divisions: so the collectorates are the registration districts, their talookas are the circles, and the villages are the units from which the primary facts are elicited. Towns of 5,000 or more inhabitants are independent circles. Jails also furnish separate returns as do certain cantonments, and the Army is shown by each Battery, and Regiment, so the system, as intended, is almost all that could be desired, indeed it would be were there a special agency, and adequate supervision.
- 15. The object in view is to ascertain, and record, the mortality in each district in proportion to its population, to investigate the cause of the excess where it is shown to be excessive, and to adopt such precautionary and preventive measures as may be most feasible. To this end the ordinary village officers are enjoined to record all deaths occurring within their respective charges. These records eventually find their way to the head quarters of the district, where they are tabulated and submitted to this office in the following form:—

Sind	<b>3,27</b> 1	6,387	9,658
	25,859 <del>1</del>	23,769	49,6281

The details from the Punch Mahals have not been obtained, but leaving them out we have 25,859 Villages, and 23,769 Hamlets—so the total of points, or units of Registration, is 49,628 besides those not entered.

It is with these Districts, and their people, we are more immediately concerned, and their areas, and population are given in the subjoined table, a column being added for density:—

		Reported 1	Population.	Area in sq	uare miles.		tion per e mile.
	(Ahmedabad	712,579		3,851		185.0	
	Broach	287,642		1,658		173-4

\ \omega_{\infty}	Thur and Parkur	225,000		15,000		15.0	
	Upper Sind	75,000		2,226		33.7	
			1,734,304		50,134.5		34.6
Во	mbay City		816,562		18.6		<b>4,389</b> ·8
			14,153,924	•	149,314·4		94.8

When the results of the general Census are exhibited this Table will probably have to be altered—and then we shall be in a position to consider such questions as the relative proportion of the sexes, age, &c. &c.

#### GENERAL POPULATION.

18. The general Population takes in all except the army, and its followers—
the residents in Cantonments—and prisoners in jails—and
the estimated total, by the Collectorate returns for Dec.

4 s R

1871, is given as 14,153,924 against 13,523,873 in 1870, so the reported increase for the year is 630,051.

The total of deaths was 279,726, and they are given as they occurred in the **Deaths**. different months contrasted with those of 1870:—

Total Deaths in	1871.		1870.
January	21,326	•••••	16,764
February	19,741 22,703	••••••	14,682 15,489
April	22,919	•••••	14,632
May June	22,418 23,115	••••••	15,312 14,237
July	24,035	*******	15,910
August	25,091 23,813	•••••••	20,374 21,663
October	24,857	•••••	22,541
November December	24,598 25,110	••••••	24,183 23,940
	279,726	•	219,727
•	219,727		
	59,999		

Now in 1870 there were carried off by disease, or accident, something over 16 persons out of every 1,000—and, although for 1871 the numbers have risen to 19—nearly 20—per 1,000, it cannot be said to have been a black letter year.

Since Registration was introduced the annual death rate has been:—

$\mathbf{For}$	1865	•••••	22.9	per mille.
,	1366		13.6	,,
,,	1867		12.2	,,
,	1868		14.4	,,
,,	1869	•••••	20.4	"
,,	1870	•••••	16.2	,,
,,	1871	***********	19.7	,,

The Divisional ratios were:-

			N. D.	S. D.	Sind.	Bomba City.*
For	1865		<b>26</b> ·8	25.2	4.3	35·1
,,	1866		8.5	18.7	6.0	20.5
"	1867	•••••	10.1	13.3	11.0	19.3
"	1868		13.5	16.3	7.8	19.4
,,	1869	•••••	20.2	21.4	16.7	21.6
"	1870	**************	16.6	<b>16·8</b>	11.9	18.9
"	1871	***************************************	22.7	19.0	13.5	20.4

From the subjoined Tables it will be seen that 250,307 births were registered during the year amongst the Civil Population:—

Total of Births in each month in 1871.

\* The total ratio is correct, but, owing to the want of distinction for Males and Pemales in the Collectorates of Kurraches, Surat, and Tanna, there is a very trifling error under this head in each month.

Annual Form No. II.—DEATHS Registered in the City of Bokean during each month of the year 1871.

These Cantonments are selected because they lie in Petty States where registration is as yet unknown.

The total deaths in each, with the ratio per mille, are given for the year under report, and for 1870.

The other Cantonments take their places within their respective Collectorates either as units, or, when qualified by numbers, as independent Circles.

#### JAILS.

The mortuary statistics for Jails are given separately, and thus show that during 1871 the average strength of prisoners in confinement was—

In Jails proper	5,731 2,218	against	5,683 in 2,326 ,,		
	7,949	"	8,009 ,,	"	

The average number of daily sick was-

The ratios per mille of daily sick to average strength were—

In all Jails 29.0 ,, 27.9 ,, ,,		36·3 ,,	25·3 in 1870. 34·4 ,, ,, 27·9 ,, ,,
---------------------------------	--	---------	---

The admissions into Hospital and the ratios of the same per mille of average strength were—

	1871.		1870.	
Ad In Jails proper In Subsidiary Jails In all Jails	2,776	1,251.6	Admissions. 5,124 3,053 8,177	1,312.6

Taking admissions by months the totals show the following ratios:-

```
Jails Proper.

In August—Maximum ....... 86.2 per mille against 96.2 in Oct. 1870. In March—Minimum ...... 56.7 ,, ,, 59.6 ,, Jan. ,,

Subsidiary Jails.

In April—Maximum....... 135.7 per mille against 200.8 in Dec. 1870. In November—Minimum..... 76.8 ,, ,, 66.2 ,, July ,,

All Jails.

In April—Maximum...... 95.9 per mille against 111.2 in Nov. 1870. In February—Minimum ..... 74.4 ,, ,, 64.5 ,, May ,,
```

Fever was in excess at the Shikarpoor Jail proper in April,—at Yerrowda in January, and at Narra Subsidiary Jail in March.

Excluding Jails with an average strength of 50, the maximum and minimum ratios of daily sick per mille of strength were—

Deaths.

The deaths, and their ratios per mille of average strength were—

	JAILS	Proper.	
		Ratio per mille.	Ratio per mille.
In Jails proper	152 59	26.5 against 164 26.6 . 71	~~ *
In Subsidiary Jails In all Jails	211	26.5 , 235	

Death Rates.

Excluding Jails with an average strength under 50, the maximum and minimum death rates were—

```
JAILS PROPER.
```

Shikarpoor—Maximum... 72.0 against 82.4 per mille at Hydrabad in 1870. Rajkote—Minimum ..... nil " nil " " Dhoolia "

SUBSIDIARY JAILS.

Bukkur—Maximum ..... 74.2 against 93.3 per mille at Mitrow Canal. Narra—Minimum ...... 3.3 ,, nil ,, at Belgaum.

#### NATIVE TROOPS.

1. From an official return supplied by the Adjutant General (see Table, page 274) the strength of the Native Army was 25,285, and, during the year, it was increased as follows:—

Increasa.	By Recruiting	2
Decrease.	From this gross total there must be deducted on the 31st December 1871:—  By Deaths	1,737

Deducting from the gross total of 26,931 the 597 removed by causes other than those pertaining to health, there is a remainder of 26,334—and out of this the loss was:—

Invaliding and Death-	By Invaliding	30· <b>3</b>	against	<b>32</b> ·8	per mille in 1870.	-
rates.	,, Deaths	13.0	"	11.4	22 29	

The proportion being 2.5 per mille less by invaliding, and 2.4 per mille greater by deaths.

Deaths out of Hospital.

Including casualties on furlough there were 94 deaths out of Hospital—3.57 per mille.

From the Monthly Returns the mean strength of men serving with their Mean strength and average daily sickness.

Regiments was 23,407 against 23,554, and the average number of daily sick was—

1,007·4 43·0 per mille. Against 954·4 40·5 ,, in	1870.
--	-------

Admissions.

The total number of admissions was 30,467 against 29,179 in 1870, the ratios per mille being 1,300.6 against 1,238.0.

Maximum and Minimum ratios.

The maximum and minimum of admissions is thus-

```
183-1 Maximum in Oct. against 158-5 per mills in Oct. in 1870.
89-8 Minimum ,, Feb. ,, 74-6 ,, June ,,
```

Comparative health value of Stations.

The ratios of daily sick per mille of average strength at the several stations give maximum and minimum as follows:—

```
Nusseerabad—Max. 117.9 against 81.8 per mille in 1870 at Jacobabad. Sadra— Min. 13.6 ,, 16.0 ,, , at Kolhapoor.
```

Comparative ratios for different arms of the Service.

In the different arms of the Service the comparative ratios of admissions to strength were—

For Artillery	1,236.1	against	940·7 pe	r mille	in 1870.
" Cavalry	1,479·3	<b>&gt;</b> >	1,709·8	"	"
., Infantry	1,293.3	,,	1,199.5	<b>,,,</b>	"
" Sappers & Miners	1,050.9	"	81 <b>7-4</b>	"	9.9

Healthiest and unhealthiest Regiments of Cavalry, The healthiest Regiment was the 2nd Light Cavalry, quartered at Deesa and Rajkote; the unhealthiest was the 3rd Regiment Sind Horse at Jacobabad.

-of Infantry.

Amongst the N. I. Regiments the healthiest was the 1st at Poona; and the unhealthiest was the 26th at Nusseerabad and Surat.

The number of deaths in Hospital was 248—10.6 per mille of mean strength

(23,407). In 1870 the number was 206—8.7 per mille of mean strength (23,554).

Scurvy.

There were 233 admissions and 10 deaths from scurvy, against 252 and 4 in 1870. There were 23 admissions and 3 deaths at Aden.

# TABLE I.—STATEMENT SHOWING THE INCREASE AND DECREASE IN THE NATIVE ARMY FROM 1st JANUARY TO 31st DECEMBER 1871.

Poona, 1st January 1872.

Strength on 1st January 1871	25,285
Increase.	
By Recruiting	
" Boys taken on effective strength	
" Otherwise received 155	1,646
Total	26,931
Decrease.	
342 By Death	
,, Invaliding	
,, Summary Dismissal, Desertion, &c	1,73
Strength on 1st January 1872	25,194
Artillery	
Sappers and Miners         478           Staff and Guides attached to Sind Horse         315	
Cavalry	
Total 25,194

### EUROPEAN TROOPS.

Strength.

The subjoined return from the Adjutant General of the Army, dated 1st January 1872, shows that the total strength was—

Effectives	11,147 331	against	10,240 341	on Jan. 1	, 1871.
	11,478	"	10,581	2)	"

		Effectives.	Unattached List.	Total.
•	Effec. Unatd. Total List.  Recruits in India	10,240	341	10,581
	Drafted or transferred from England or         Colonies         1,585         0         1,585           Transfers received         735         1         736           Joined from Desertion         6         0         6	2,339	1	2,340
		12,579	342	12,921
	From this gross total there must be deducted on the 31st  December 1870:—  Effec. Utated. Total List.  Time expired	1,411	32	1,443
Reversions	Remanded from Unattached List to Effectives 20 Transferred from Effectives to Unattached List 41  Difference to be deducted from Effectives and added	11,168	310	11,478
	to Unattached List	21	21	
	Strength on 1st January 1872	11,147	331	11,478

It will be seen that the increase during the year was 2,340; the decrease being 1,443.

The difference—903—represents the net increase on the total strength of January 1st, 1871.

The calculations of Invaliding and Mortality are based upon the gross total of Effectives after deducting the number removed by causes other than those pertaining to health. The gross total was 12,599, and the removals were 1,079; and out of the remainder of 11,520 the loss was—

```
By Invaliding... 19.0 against 27.8 per mille in 1870.

", Deaths ...... 12.9 ", 16.8 ", ",
```

The proportion for the year being 8.8 per mille less by invaliding, and 3.9 per mille less by deaths.

By Table II. it will be seen that, on 1st May 1871, the percentage of married amongst the soldiers of all grades and all arms was 11.66 against 11.34 in 1870; amongst the rank and file it was 8.43 against 8.16.

Amongst the rank and file of the three arms the comparative ratios to strength were—

Total Abstainers

Out of the average strength of 10,919 there were 318 Total Abstainers (see Table III). Of these—

```
The Artillery give a percentage of 0.5 against 0.8 in 1870.

"Cavalry """" 0.2 " 0.3 "
"Infantry ", " " 4.0 " 1.4 "
```

The 56th Regiment show 29.5 per cent. of Total Abstainers.

From the Medical Weekly Returns the mean strength of the men serving

Mean Strength and average Daily Sick.

with their Corps or Regiments was 10,800 against 10,468 for 1870, and the average number of daily sick was—

```
596 or 55·1 per mille
Against ..... 609 or 58·2 ,, in 1870.
```

The total number of admissions was 16,558 against 16,779 in 1870; the Admissions. ratios per mille being 1,533·1 against 1,602·9.

Maximum and Minimum Ratios.

The maximum and minimum of admissions are—

```
171.3 maximum in June against 173.8 per mille in September 1870. 92.4 minimum in Feb. " 102.0 " in February 1870.
```

Comparative Health Value of Stations.

The ratios of daily sick per mille of average strength at the several Stations give maxima and minima as follows:—

```
Nusseerabad... 96.0 against 102.3 per mille in 1870 at Nusseerabad. Deolalee ..... 30.3 ,, 38.4 ,, ,, at Aden.
```

Comparative Ratios for different Arms of the Service.

In the different arms of the service the comparative ratios of admissions to strength were—

For Artillery	1,575.7	against		per mille in 1870.	
", Cavalry …	1,586.7	1)	1 <b>,467·4</b>	,, ,,	
,, Infantry	1,446·1	,,	1,515.5	" "	

Healthiest and Unhealthiest Regiments. The healthiest Regiment was the 1-2nd Foot at Belgaum; the unhealthiest was the 1-8th Foot at Nusseerabad.

Causes of Sickness.

Taking the orders of diseases under the "New Nomenclature" the highest ratios per mille of admissions to strength were those presented by—

General Diseases Sub-Division A, 722.1 per mille.

Do. Sub-Division B, 152.9 do.

Local Diseases, Digestive system, 213.9 do.

Of the "General Diseases, Sub-Division A," Fever—taking all types of this disorder—as usual presented the highest figure of admissions—T,781 out of 7,799, and in a marked degree the highest ratio (47.0 per cent.) of admissions from all causes.

Comparing the totals of 1871 with those of 1870 and previous years the rate of prevalence of Fever during 1871 (720.5 per mille of strength) is found to be less than in 1870; but higher than that of the previous six (6) years.

The Death-rate from Fever was 2.5 per mille of strength, against 5.0 in 1870.

Cholera was prevalent at some period during 1871 among the Civil population throughout the Presidency, except in the Sind Division.

There was only one (1) case of cholera among the British Troops at Sattara, and it was not fatal.

Small-pox. There was no case of small-pox during the year 1871.

Of the "General Diseases, Sub-division B," Syphilis (Primary and Second-General Diseases. Subdivision B, Syphilis. ary) presented 945 cases, being at the rate of 87.5 per mille of strength. There was no death.

Phthisis Pulmonalis.

There were 102 admissions and 15 deaths during 1871 from Lung diseases.

Under the head of "Local Diseases," "Diseases of the Diseases of the Digestive System. Dysen. Diarrhosa. Diseases," "Diseases of the Digestive System" it is to be noticed that Bowel affections (Dysentery and Diarrhosa) caused in all 900 admissions and 12 deaths, the ratios being—

The Presidency Circle furnished the greatest number of cases (351, 6 fatal); the highest figure for Dysentery (35 cases) being presented by Aden, and the highest for Diarrhoea (128 cases) by Kurrachee.

The admissions from Liver Diseases were 529, and the deaths 17, presenting the ratios

The Mhow Circle presented the highest ratio of admissions per mille of strength (65.6), and also of Deaths (1.4).

Diseases of the Urinary System, Gonor-rhœa.

Of diseases of the Urinary System, Gonorrhoea shows 826 admissions, with a ratio of 76.5 per mille of strength.

Poisons, Delirium Tremens, Alcohol. Under the head of "Poisons" it is noted there were 70 admissions and 6 deaths from "Delirium Tremens," and 35 admissions and 2 deaths from "Alcoholism."

"Injuries" occasioned 15 out of the 148 deaths in 1871

(Table X). Of these 4 were Accidental, 3 Homicidal,
6 Self-inflicted, and 2 Judicial.

The number of Deaths was 148—13.7 per mille of mean strength (10,800).

In 1870 the number was 175—16.7 per mille of mean strength (10,468).

# SECTION 11.

HISTORY OF THE CHIEF DISEASES
DURING THE YEAR.

## SECTION II.

# CHIEF DISEASES.

HISTORY OF THE CHIEF DISEASES DURING THE YEAR.

#### CHOLERA.

Amongst the general population the total of deaths was 5,821 against 2,666 in 1870. Out of every 48.05 deaths 1 was from Cholera, whilst in the previous year the proportion was 1 in 82.41.

Territorial distribution.

The territorial distribution was as follows:-

	1871.		1870.
Northern Division	3,345 2,182 	against	457 1,823  386
•	5,821 2,666	•	2,666
-	3,155		

By Collectorates or Districts it was-

	1871.		1870.
Ahmedabad	20	against	<i>5</i> 7
Ahmednuggur	<b>65</b> 8	"	62
Belgaum	40	"	302

Out of every 2,431.53 persons living 1 died from Cholera. In 1870 the proportion was 1 in 5,072.72.

In the Statement appended to the Map the 6th column gives the gradation by localities—and in the supplementary Statement the 4th column shows the first appearance of the disease—a 3rd Table gives the mortality by months in each circle—taken together these Tables show that, except in Sind, Cholera was present at one time or other in nearly every part of the Presidency.

[Statement

STATEMENT appended to Map illustrating the distribution, &c., of Cholera in the Presidence during the year 1871.

November	16,297	•	"	•••••
December	16,479		"	
		47,793	"	
		167,677	-	

## Their territorial distribution was the following:-

	1871.		1870.
Northern Division Southern ,, Sind	76,323 66,492 18,593	against	46,816 61,417 18,056
Bombay City	6,269 167,677 131,024	. "	4,785
	36,653	•	

The subjoined table gives their prevalence in the several Districts:—

	Pever.		
	1871.	1870.	
Ahmedabad Ahmednuggur Belgaum Broach Canara Colaba Dharwar Hydrabad Kaira Khandeish Kulladghee Kurrachee Nassick Poona Punch Mahals Rutnagherry	15,187 7,267 5,808 4,117 5,868 3,523 9,240 6,050 13,530 10,416 5,189 2,839 7,788 10,791 2,613 5,847	9,748 6,548 4,126 2,703 5,250 2,384 6,834 5,144 8,173 8,476 5,825 2,568 5,666 7,542 2,014 4,825	
Sattara Shikarpoor Sholapoor Surat Tanna Thurr and Parkur Upper Sind. Bombay City  Total.	11,944 8,489 4,538 6,386 12,763 469 746 6,269 167,677 131,024	10,635 8,797 4,166 5,922 7,446 713 834 4,735	

#### The maximum and minimum are-

At Ahmedabad............. 15,187 against 10,635 at Sattara in 1870.

"Thurr and Parkur... 469 " 713 at Thurr and Parkur.

Fevers in Cantonments.

In the Cantonments mentioned there were 845 deaths—and of these 279 were at Mhow.

Fevers in Jails.

The ratios of admission per mille of strength were as follows:—

The percentage of Fever admissions to those from all causes being—

Extremes of prevalence.

The maxima and minima were reached in January and August respectively—as follows:—

JAILS PROPER.

```
Sattara—Maximum.....943.7 against 915.0 per mille at Shikarpoor in Dec. 1870. Kolapoor—Minimum ... 30.1 ,, 47.2 ,, Bombay in July ,,
```

#### Subsidiary Jails.

```
Narra—Maximum......950·0 against 1150·3 per mille at Mitrow Canal. Carwar—Minimum ......415·1 ,, 300·9 ,, ,, Belgaum.
```

Death Ratios.

The death ratios from Fever were -

```
In Jails proper........6.8 against 6.2 per mille in 1870.
In Subsidiary Jails ...1.8 " 8.2 " " " In all Jails ............5.4 " 6.7 " "
```

The highest ratio was at Shikarpoor, 29.5, but in 10 out of 21 Jails proper and in 5 out of 7 Subsidiary Jails there were no deaths from Fever.

#### BOWEL COMPLAINTS.

The diseases under this head are Diarrheea and Dysentery.

General Population.

The total of deaths was 30,422 against 26,738 in 1870.

Localities.

The contrasted maxima and minima were:-

```
For Ahmedabad ... 3,078 against 3,038 at Ahmednuggur in 1870.
" Upper Sind ... 12 " 1 " Upper Sind "
```

5 в

They are given by Districts in the subjoined table:-

No.	Collectorates.	1871.	1870.

	Total	30,422 26,738	26,738
		4,784	

In Cantonments.

The total of deaths was 139 against 147 in 1870.

The contrasted maxima and minima were:-

In Jails.

The total was 40 against 39 in 1870.

There was the same total for several Jails, but in none was it higher than 5.

The ratios per mille of strength were:-

Jails Proper.	
DohudSattara	
Subsidiary Jails.	
Bukkur Dhooli <b>ak</b> ote	

Amongst Native Troops. The total was 13 against 18 in 1870. The highest number in any Regiment was only 2, in the 10th N. I., at Tanna.

#### INJURIES.

General Population.

The total of violent deaths—that is deaths from Injuries intentional or accidental—was 6,279 against 4,599 in 1870.

Localities.

The contrasted maxima and minima were—

At Hydrabad ... 905 against 341 at Ahmednuggur in 1870. "Upper Sind... 41 " 26 "Upper Sind "

They are given by Districts in the subjoined table:—

No.	Collectorates.	1871.	1870.
No.  1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Ahmedabad Ahmednuggur Belgaum Broach Canara Colaba Dharwar Hydrabad Kaira Khandeish Kulladghee Kurrachee Nassick Poona Punch Mahals Rutnagherry Sattara Shikarpoor Sholapoor Surat Tanna Thur and Parkur	346 171 276 146 216 136 319 905 276 243 235 138 166 304 99 343 328 517 195 203 312	289 341 187 73 178 86 304 190 174 187 231 209 223 199 61 246 261 208 138 160 297 69

#### RECAPITULATION.

It will be seen that the total population of our Registration Districts is classed under five different sections, each differing from the other as regards habits of life—and for each class there is given the mortality from

Cholera.

Small-pox.

Fevers.

Bowel Complaints (Diarrhœa and Dysentery).

Injuries (accidental and intentional).

This comprises the great bulk of the people, some living under an advanced system of Municipal government, others wearing out existence in the haphazard style which obtains in places more remote and less cared for, but all engaged in the ordinary pursuits of civil life, or living as to them it may seem best.

The subjoined Table gives an abstract of the deaths, ranged under their several heads, from 1866 to 1871:—

Deaths amongst the General Population from 1866 to 1871.

Years.	Cholers.	Small-pox.	Fever.	Bowel Complaints.	Injuries.	All other Causes.	Total.
1866	19,019	3,846	94,413	19,105	4,286	44,607	185,276
1867 1868	5,271 6,347	9,857 15,183	97,524	17,372   19,289	<b>4,338</b> <b>4,163</b>	51,568 41,970	178,294 184,476
1869	52,330	12,666	128,826	29,935	4,103 4,713	55,527	283,997
1870	2,666	4,606	131,024	24,550	4,599	52,282	219,727
1871	5,821	9,403	167,677	30,422	6,279	60,124	279,726
	91,454	55,561	709,352	140,678	28,378	306,078	1,331,496

Those which lie within our own territories differ but little from other towns and villages, and they take their places amongst the general population. They are perhaps on the same footing as ordinary Municipalities, with the additional advantages of constant European supervision—

closely associated with military occupancy they necessarily draw a certain amount of trade and manufacture. They have an organised Police, and, generally speaking, a Dispensary, if not a Civil Hospital, so if, on the one hand, they tend to develop the vices of urban communities, they offer a means of prevention and cure.

The Cantonments specified in the body of the Report, are those which lie in non-registration districts, and their lists of casualties is here given:—

Years.	Cholera.	Small-pox.	Fever.	Bowel Complaints.	Injuries.	All other Causes.	Total.
1866	53	13	1,478	202	49	908	2,693
1867	39	82	1,301	296	62	1,040	2,820
1868 1869	43 490	79 99	1,155 1,910	250 512	105 101	1,051 1,630	2,683 4,742
1870	10	6	1,225	297	77	1,185	2,800
1871	•••••	18	845	139	25	782	1,809
Total	635	297	7,909	1,696	419	6,591	17,547

Deaths in Cantonments from 1866 to 1871.

Here we deal with mixed elements, but all are under an organisation so perfect, that it may almost be said natural functions are performed by order. They eat, and drink, and work, and rest by rule, so in this way they can be contrasted with those from whom they are taken. The deaths are as follows:—

Years.	Cholera.	Small-pox.	Fever.	Bowel Complaints.	Injuries.	All other Causes.	Total.
1866 1867 1868 1869	2 7 26	2 1	235 142 32 40 54	140 30 15 46 39	*	152 83 82 100 140	533 259 137 212 235
1871		•••••	43	40	4	124	211
	41	3	546	310	6	681	1,587

Deaths in Jails from 1866 to 1871.

These live in a great measure under the special protection of the Government, and except as regards their immediate domestic wants, they are surrounded by measures of precaution, apart from the contingencies which must always pertain to military service. They are better cared for than their brethren in civil life, and ought to be less subject to disease. Their mortality is here given:—

<sup>\*</sup> Injuries were not classified until 1870.

Deaths amongst Native Troops from 1866 to 1871.

Years.	Cholers.	Small-pox.	Fever.	Bowel Complaints.	Injuries.	All other Causes.	TOTAL.
1866	9	1	44	16	4	88	162
1867	ì		43	21	14	115	194
1865	17	1	<b>5</b> 8	38	8	118	240
1869	33	3	44	19	10	115	224
1870	1		50	18	1	136	206
1871	6	•••••	56	13	2	94	171
Total	67	5	295	125	39	666	1,197

All these statistics must be taken as quite separate and distinct from those for all natives, and they can only be compared with similar returns from similar troops living under the same conditions.

Deaths amongst European Troops from 1866 to 1871.

Years.	Cholera.	Small-pox.	Fever.	Bowel- Complaints.	Injuries.	All other Causes.	Total.
1866			26	16	27	77	153
1867	57		37	29	26	72	221
1868	8	<b></b>	15	16	23	73	135
1869	55	1	32	14	20	103	225
1870		<b>1</b>	<b>52</b>	16	11	95	175
1871		•••••	29	12	13	97	151
Total	128	1	. 191	103	120	517	1,060

In the following table there is given a general abstract of the mortality during the past six years amongst the different sections into which the population has been divided, and it shows what a terrible enemy is fever. With bated breath we speak of those epidemics which now and again break out with such violence, but in balancing the ghastly account it will be seen that from fever alone during the years under notice the deaths have exceeded those from all other causes put together by 63,699:—

Deaths	from	Cholera	92,325	Deaths from Fever	718,293
,,	"	Small-pox	55,867		
,,	"	Bowel Complaints	142,907		
"	,,	Injuries	28,962		
,,	,,	All other Causes	314,533		
		-		_	654,594
				_	63,699

The subjoined tables give the mortality for each of the six registration years, and the summary shows us in what direction we should work:—

				1866.							1867.

## SECTION III.

### THE METEOROLOGY OF THE YEAR.

In this Presidency the Meteorological Observations recorded at Colaba are so immeasurably superior to all others, that it may almost be said they are the only observations worth having. They are carried out under the immediate supervision of Mr. Chambers, F.R.S., whose late Report is perfectly exhaustive as regards the so-called Island of Bombay.

Observations are also taken at certain Military Stations, and the tables are sent in to the Inspector General of the British Medical Service.

Under the orders of Government Thermometric Observations were made with a view to ascertain the comparative temperatures of the upper and lower stories of the "Standard Plan" barracks. For the several stations there are given the original Tables, with monthly summaries, and these again are brought into one general abstract. There is also a statement giving the fever admissions from each storey.

The most noticeable feature of the year was the general scantiness of the rain-fall.

# POONA.

REGISTER of THERMOMETRICAL OBSERVATIONS in the Barracks of H. M.'s 83rd Regiment at Wandwree, during the month of February 1871.

# SECTION V.

A RECORD OF PERSONAL PROCEEDINGS.

#### SECTION V.

#### A RECORD OF PERSONAL PROCEEDINGS.

On the 18th March 1871, I assumed charge of the Sanitary Commissionership, and on the 23rd started on special duty to Mount Aboo.

From this duty I returned on the 11th May, and then took up the preparation of the Annual Report for 1870.

On the 15th of last August, I was entrusted with the preparation of the details for the General Census, and from that day till the close of the year I was unable to leave the Office, so the only inspections made were those at Deesa and Mount Aboo.

A special report upon the latter place was submitted, and will be found in the "Monthly Proceedings" for the second quarter of 1871, and I allude to it now to correct an error in the Table given at page 69. By oversight the periods under observation were treated as fractional instead of total periods; but now that the Table is corrected it still shows that as the local conditions were improved the admissions from Fever were in a decreasing ratio to strength—it shows that in 13 years the ratio was reduced from 101.33 per 1,000 to 47.19.

Abstract given at page 69 of the "Monthly Proceedings" for the second quarter of 1871.

Dr. Moore's and Dr. Orwin's tables extend over 14 years, and embrace three distinct periods:

1st. When the barracks were in the low-lying valley, and there was no attempt at sanitation.

2nd. When a new position was taken up at Gundamuk, but when all around it was still jungle.

3rd. When year by year improvements were made until the present very creditable condition was attained.

The periods may be tabulated as follows:—

Periods.		Average strength.	Average No. of admissions from Fever.	Ratio of Fever admissions per 1,000 to strength.	
lst.	1857-61		112-60	11.40	101.33
2nd.	1862-66	•••••	77.03	6.85	886-90
3rd.	1867-70	••••••	107-26	5.06	476·10

The corrected Table is the following:	The	corrected	Table	is	the	following:
---------------------------------------	-----	-----------	-------	----	-----	------------

Periods of Observation.	Average strength.	Average number of Fever admissions.	Ratio of Fever admissions to 1,000 strength.	
1657-61	270•4	27:4	101.33	
1862-66	184.88	16.44	88.92	
1867-70	321.785	15-1875	47·19	

The surface and general conservancy within Military limits was highly satisfactory, and reflected the greatest credit upon all concerned. The Civil Station was fairly clean, and in common justice I think the complaints as to its condition have been somewhat exaggerated. Not having been there for 8 years, I could appreciate the improvements that were everywhere apparent, at the same time if funds were forthcoming a very great deal more might be done.

With regard to Deesa, I can but notice its wants. In the Infantry lines a recreation-room is much needed; so too is a suitable canteen, and a coffee-shop. There is no skittle-alley nor dry-earth shed, and the kitchen accommodation is insufficient. There is no expense magazine, although the arsenal is on the other side of the Station. Within the cell-yard there was neither sentry-box nor sunshade; at the workshops common mats were the substitutes for doors and windows, and verandahs are required on the East and West faces. The drainage generally is defective. In noticing these wants I have nowhere remarked upon defects of construction; but until there is settled the long-pending question as to whether the European Troops are to be stationed in the plain, or on the Hill, it cannot be expected that any great outlay should be sanctioned—nothing in fact beyond what suffices to keep present buildings in good order.

In the Artillery lines a forge and shoeing-shed are needed. In both the new rooms near Nos. 219, 220, 221 Barracks the floors had sunk, and the drainage was bad.

The Commissariat cattle yards and slaughtering shed were clean, but there was no drainage. The so-called filth pots were simply horrible, and they must be so as long as they are kept up on the principle that obtains. Deep pits are dug and are filled with night-soil, &c. without a due admixture of earth. I need hardly urge the desirability of shallow trenches with prospective cultivation; but if deep pits are unavoidable the proportion of earth to feeces should be as 8 to 1, and never less than 4 to 1. The ground is an open marl in which no contours can be preserved, and, in the Artillery yard, the pits were little better than open cesspools with a mere film of earth.

The Bazar, with its surroundings, was in good order.

# SECTION VI.

SANITARY PROGRESS.

#### SECTION VI.

### SANITARY PROGRESS.

By Government Resolution in the Military Department, No. 604, dated 3rd February 1872, it was ruled that the Cantonment Committee Reports shall, for the future, be embodied in the Annual Report from this Office.

It will be seen that there are 26 of these Reports, and they give information upon the following points:—

- 1. Health of the Corps forming the Garrison.
- 2. Drainage within the Cantonment.
- 3. Water Supply.
- 4. Accommodation for the Troops.
- 5. Conservancy.
- 6. Cleanliness of the Station.
- 7. Quality of Rations supplied to Troops.
- 8. Other defects.
- 9. Measures adopted for improving sanitition.
- 10. Suggestions for remedying existing defects.

The Reports are given verbatim.

Under this Section there is given a list of works, &c., connected with the accommodation, health, or comfort of the Troops. General Orders, too, and Circulars, are also given, together with the Statement of Annual Reliefs.

For the Civil population there is an equally active supervision, but the great want is want of funds. Extensiveworks for irrigation and water-supply are in progress at various places—more especially at Kurrukwasla near Poona—and at Punderpoor.

## Sanitary Report of Poona Cantonment for 1871.

#### Section I.—Health of the Corps forming the Garrison.

The health of the Troops during the year has been good.

The prevailing sickness was intermittent and simple fevers and ague.

The men in H. M.'s 83rd Regiment suffered from ague and fever, attributable to the unexceptionally unhealthy season.

Much of the sickness in the 56th Regiment was the result of the youth of the men: two-thirds of whom being under 20 years of age, and the change from a very cold to a hot climate at the commencement of the hot season, exposure to the sun, and the unhealthy season.

In the General Depôt the men suffered from ague greatly, owing it is believed from bad accommodation, its situation on low ground, and the bad weather during the year, but the high percentage of sickness is attributed to the weakly state of the men.

Compared with the amount of sickness, mortality has been fortunately very small—56th lost four men. In the 83rd five cases proved fatal. At the General Depôt there were eight deaths, but all amongst invalid arrivals.

The Native Regiments stationed here during the year suffered more or less from fever, and the death rates have been indeed very small, varying from 2 to 31 to the strength of the Corps.

The health of the European and Native community was good; there were in all 455 deaths, giving about one per cent.

#### Section II. (a).—Drainage within Cantonment.

There being no drainage in the Cantonment, the water from bath-rooms, urinaries, and water-closets runs into cesspools, and is allowed to sink into the ground in the Station and the Bazars. This, at certain seasons of the year, proves a great source of nuisance.

The outlay to remedy this defect it is considered would not be much, as the ground on all sides falls towards the natural drainage of the country, and is expected will add to the health of the Station considerably. The waste water, however, from the Regimental urinaries, &c. is removed by means of puckauls.

There do not exist any jheels or marshes in the vicinity of the Cantonment, which are considered prejudicial to health.

#### Section II. (b).—Water Supply.

The water supply drawn from wells, and an underground aqueduct is scanty, but of good quality, except during the hot season, when it is augmented by water pumped up from the river at the Bund, and into which the drainage of the City flows. The water is thus rendered very unwholesome, notwithstanding the process of filtration it undergoes before it is available for use.

Water is not equally distributed throughout the Cantonment, and the present scanty supply will not admit of this necessary element of life being brought within an easy reach of all parts of the Station. But the Kurruckwasla water scheme is expected to be completed up to Poona shortly, when it is hoped that a good and abundant supply of water will be provided in different parts of the Cantonment, and thereby remove the inconvenience at present experienced.

#### Section II. (c).—Accommodation for the Troops.

The accommodation both in Hospitals and Barrack Rooms has been considered ample and satisfactory—there has been no over-crowding, the regulated cubic and superficial space being available for all the men. But the General Depôt Barracks are not good, and were condemned long ago.

The regulated cubic and superficial space in the Staff Hospital is also stated not available, and is considered little more than sufficient for a healthy man-

#### Section II. (d).—Conservancy.

The latrines used by the European Troops have been kept clean by the adoption of the dry-earth system, and those used by the Native Troops and the general public are on the old system. The adoption of disinfectants in the latrines and urinaries in the military lines has proved successful in subduing to a great extent the nuisance arising from disagreeable and unhealthy odour. The sewage is removed by means of puckauls.

Pseudo dry-earth system has been under experiment for the last two years in connection with the 23rd Regiment N. I. But the close proximity of moveable wooden latrines placed over trenches to the lines, is considered objectionable, and their situation is looked upon as a prolific source of danger to the health of the Station, especially during the wet season; their danger was pointed out to the authorities concerned by a medical gentleman, but no notice appears to have been taken of the warning. If their use cannot be altogether abandoned, it is considered highly necessary that they be removed from their present most frequented locality to a considerable distance to leeward of Camp.

Natives have of late been persuaded to adopt metallic pans for their latrines, and they have been very largely used, thereby preventing to some extent the percolation of fluid excrets into the soil, which has hitherto been the case through the use of bamboo baskets.

No land is at present cultivated by means of sewage manure, there being none available for that purpose at a convenient distance.

#### Section II. (e).—Cleanliness of the Station.

The Station throughout all its parts has been kept in a tolerably clean state during the year, except some parts of the Native Bazars, owing to the want of required cart agency.

The houses and compound walls have been lime-washed, which adds to the cleanliness and decent appearance of the place.

#### Section II. (f).—Quality of Rations supplied to Troops.

The rations supplied to the Troops during the year through the Commissariat Department were good and wholesome, and very few, if any, complaints were preferred during that period.

The price of the food for the population is considered high, but there has been little or no deviation worthy of notice.

#### Section II. (g).—Other defects,

The want of public latrines for the use of the lower classes of the residents is much felt, since their latrines are not built upon any principle whatever, and their proximity to the dwelling houses is considered greatly prejudicial to the health of the inmates, especially in the wet season, as they are not covered. But suitable sites for the removal of this crying want do not exist anywhere in the Cantonment, and the purchase of ground in the neighbourhood would cost Government a great deal.

The provision of public urinaries and the erection of dust-hins in different parts of the Station is a great desideratum.

## Section III.—Measures adopted to improve the Sanitary condition of the Station.

Lime-washing throughout the Cantonment was adopted.

Iron pans have been greatly used in the latrines in the Native Bazars, instead of bamboo baskets.

The construction of open drains in the Cantonment is under consideration, and an estimate for their cost is under preparation.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.—g.) already given in Section II.

- 1. The construction of a general system of open drains throughout the Cantonment more especially in the Sudder Bazar, is much required.
- 2. The more extensive distribution of water, on the completion of the Kurruckwasla water works, by means of reservoirs fed by pipes from the same, will be necessary.
- 3. The provision of better accommodation and on a more elevated ground than at present for the use of the General Depôt is much required. Improvement in the accommodation of the Staff Hospital is also required.
- 4. To abandon the use of the moveable latrines altogether, or their removal from their present locality to a considerable distance to leeward of the Camp.
  - J. T. GRANT, Major General, President Cantonment Committee.
  - L. C. STEWART, Deputy Inspector General of Hospitals, B. T.
  - G. G. W. MAITLAND, Deputy Inspector General of Hospitals, I. T.
  - G. J. MELLIS, Executive Engineer.
  - W. H. ROSS, Captain, Brigade Major.
  - G. C. EVEZARD, Lieut.-Colonel, Secretary Cantonment Committee.

## Sanitary Report of Kirkee Cantonment for 1871.

#### Section I.—Health of the Corps forming the Garrison.

The health of the Royal Artillery at Kirkee average strength 429 has been good, the mortality about 1 per cent; the chief diseases have been ague, and venereal. There have been 5 deaths—one only attributable to climate. Average daily sick 22.66.

The Sappers and Miners strength 395 for past year has been good, sickness small, about 10.4 average daily sick. The chief diseases fevers.

The mortality has been high; 1 officer and 6 men; of the 6 only one due to climatic cause; one hereditary (phthisis); one syphilitic; the other 3 accidental. The officer died from disease probably contracted in Abyssinia.

The health of the general community has been good.

#### Section II. (a).—Drainage within Cantonment.

A marshy bit of ground exists in front of the Sappers and Miners lines outside Cantonment limits. The Officer in medical charge Sappers and Miners considers it most objectors

tionable; it is about 20 yards by 15—immediately in front of, and about 20 paces distant from the Sappers and Miners Quarter Guard.

Drain from the Bazar water tank requires improvement.

There is a spot on the right of the R. A. lines which requires draining, as after heavy rain, water lodges there, rendering the ground so soft that sometime ago an officer's horse sank up to the houghs; any drain made there should be covered.

#### Section II. (b).—Water Supply.

The water supply is good and ample—but the open tank system is objectionable, as the water gets dirtied by dust, &c. blowing about and the insertion of vessels by Natives.

Closed raised iron tanks with water cocks should be adopted.

#### Section II. (c).—Accommodation for the Troops.

For the European Troops ample and good.

The Native Troops have a sufficiency of accommodation as far as actual space is concerned, but their huts are badly placed, near the river, Bazar and quarries—with a marsh in front, and latrines on the only open side.

These huts are in a bad state of repair.

No overcrowding.

The Sappers and Miners Hospital requires a fever ward. There are no quarters for the Apothecary, nor anything like sufficient quarters for the Hospital Assistants, especially as to cookrooms, so they have to cook in their own houses and endanger the safety of the building.

No huts for the second class Hospital Servants, and consequently a difficulty in keeping them.

There is a small cesspool attached to the Hospital latrine.

No separate wards for infectious or ophthalmic cases.

No dead house.

#### Section II. (d).—Conservancy.

The condition of the latrines and urinaries of European Troops is very good, the dry earth system carried out as far as possible. All sewage is carted to the manure yard. At present no land is under cultivation, but this is under consideration.

The dry earth system is carried out in the Native lines as far as possible considering the habits of the people.

The latrines for Native Troops have no roofs to them, so that in wet weather the earth conservancy cannot be carried out.

The Native population have 4 public latrines—2 on flanks of Cantonment, chiefly used by servants, and 2 Bazar latrines; earth is not used in these, they are clean and in good order.

#### Section II. (e).—Cleanliness of the Station.

The Station and private compounds are generally clean, as also the Native Bazar, neglects are brought to notice of the Assistant Cantonment Magistrate and adjudicated by him on his visits to the Station from Poona once a week, or less frequently as the case may be, or in Poona if occasion requires.

#### Section II. (f).—Quality of Rations supplied to Troops.

There is no fault to be found with the rations.

There has been little or no deviation in the market price of food.

#### Section II. (g).— Other defects.

The Medical Officer considers that the practice of keeping harness and saddlery in the barracks occupied by the European Troops is highly objectionable.

There is an objectionable enclosure No. 166 on the right of the European lines, used as an Engineer's Store-yard.

A line of thatched quarters with out-houses attached in the R. A. lines, occupied by Non-commissioned Officers of the Sappers and Miners might to be removed, as in the opinion of the Medical Officer, they impede a free circulation of air.

## Section III.—Measures adopted to improve the Sanitary condition of the Station.

Some houses in the European lines which were reported as objectionable by Cantonment Committee on 1st February 1871 have been removed.

The R. A. Lines have been to a certain extent levelled, and old foundations removed.

The ventilation of R. A. Hospital has been improved by making windows flush with the floors.

Ridge ventilation has been supplied to the Female Hospital.

Under consideration.

Improvement of drain leading from water tank on right of Native Bazar.

Flagging floor of Apothecaries' quarters R. A. Hospital, to prevent damp from oozing through the floor—not habitable in its present condition.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

- 1. To erect Harness rooms.
- 2. To remove the objectionable buildings in R. A. lines.
- 3. To remove the enclosure No. 166.
- 4. The present sunken open masonry tanks, to be replaced by closed raised iron tanks with cocks, in order to prevent contamination of the water.
  - 5. The improvement of the Bazaar tank drain should be carried out.
  - 6. The marsh should be drained or Sappers and Miners lines removed to another spot.
  - 7. The drainage required in R. A. lines should be carried out.
    - J. D. WOOLLCOMBE, Colonel, R.A., Commanding Kirkee, and President Cantonment Committee.
    - F. CONYBEARE, Colonel, R.A., Senior Regimental Officer.
    - R. A. CHAPPLE, Surgeon, R.A., Principal Medical Officer.
    - G. H. CANDY, Captain, R.A., Station Staff Officer.

M. J. MACARTNEY, Captain, R.E., Ex. Engineer in charge.

Members

I sign this under protest, consequent on the entry recorded commenting on my visits to Kirkee in my Magisterial capacity, without either my having the opportunity of a hearing by the Cantonment Committee, or the Cantonment Committee the benefit of forming their judgment thereon, which appears to me to be opposed to para. 21 Chapter II. of the Cantonment Rules.

I can now only most positively assert the fact, that while I have sometimes visited Kirkee twice in the week, I have invariably during my connection with that Station, now extending over nearly three years, visited it weekly; and furthermore that neglects though

adjudicated on my visit to the Station when expedient, they are also to the extent of nearly one-half of the Cantonment Rules triable necessarily within 24 hours. The Police being bound by Law to bring those offenders before the Magistrate having jurisdiction wherever he may be, within that time.

F. S. IREDELL, Captain,
Assistant Cantonment Magistrate and Secretary.

## Sanitary Report of Ahmednuggur Cantonment for 1871.

#### Section I .- Health of the Corps forming the Garrison.

The Corps forming the Garrison during 1871 were:

C/D R. H. A.
3rd Hussars.
H. M.'s 16th Bombay N. I.

Health fairly good.

Total admissions and strength:-

1	Admissions.		Strength.		Proportion.	
C D R. H. A	243	from	156	=	1,553	per 1,000.
3rd Hussars	599	<b>,,</b>	484	=	1,236	,,
16th N. I	754	>>	690	=	1,121	21
Total Deaths to strength:-						
C/D R. H. A	None	from	156	=	None pe	er 1,000.
3rd Hussars	5	"	484	=	10.3	,,
16th N. I	· <b>5</b>	"	690	=	7.4	,,

The Returns of the three Corps show that ague was much more prevalent than in the previous two years. It seemed to affect them and the native population of the Cantonment to the same unusual extent. Much liver and spleen congestion caused. Due apparently to an unusually dry South-West monsoon, only some 16 inches of rain fell, and to the hot season being thereby much prolonged. There is the black "cotton" soil around. Apparently no malarious cause in the Cantonment, and all sanitary arrangements have been good, with one or two exceptions to be noticed.

Simple continued fever somewhat prevalent too.

The Battery of Royal Horse Artillery was so fortunate as to have no deaths amongst the men.

The five deaths in the 3rd K. O. Hussars were :--

- 1 Simple continued fever.
- l Sunstroke—the only case.
- 1 Hepatitis.
- 1 Ulceration of intestines.
- 1 Delirium Tremens.

Caused by high temperature, malaria, and intemperance.

The five deaths in the 16th N. I. were:-

- 3 Pneumonia.
- 1 Peritonitis.
- 1 Ascites.

The latter due to disease of liver. No cholera, small amongst the troops.

The health of European residents has been very good, of Departmental Staff Serjeants and others living on the ra-

The average number of the Native community has bee 5,964. The total deaths amongst them in 1871 was 180 or

Principal cause of mortality "fever," "dysentery volence." Amongst the latter were two cases of murder an

Section II. (a).—Drainage within

Surface drainage good.

At any parts where there is soil it holds water some time general system of underground drainage.

The ditch surrounding the Fort is swampy after rudrainage.

No jheels or marshes in the station or in its immediate

Section II. (b) —Water  $Sup_{\parallel}$ 

Has been of sufficient quantity.

Rainfall about 8 inches in January and 10 inches only. The fall was three times as much in 1870.

Has been of good quality.

No covers for the wells drawn from.

The wells are over, or communicate with the three a partner, and Shahpore.

Drawn by leather buckets and ropes by Native bheest mussacks carried on cattle.

#### Section II. (c).—Accommodation fo

The Battery of R. H. A. occupied old inferior Barrayear 1871. Two of the three new Barracks on the standard though one on the 9th March and the other on 7th Julysuspended. To accommodate the three Divisions of the Barracks and ground-floor rooms have been occupied for sleeping, the entirely given up.

There has been no overcrowding.

The 3rd Hussars being over the strength though were year, to quarter 20 men in the Main Guard Room, the Main the Dry Room.

The Cavalry had too to borrow the nearest Barrack  $\mathbf{R}_{t-1}$  wards of the Hospital by an increased number of sic November.

The Regiment of N. I. completed their new Hut lines

Defects are:-

Want of the third Barrack for the R. H. A. Further pital. New workshops for the Regiment of Cavalry. I Cavalry married Quarters.

No Gymnasium building.

3 F

Reading Room and Canteen too small and no separate Recreation Room or Coffee-shop for the Cavalry.

A temporary Lock Hospital ample for the wants of the Station and in good working order. Public women healthy. No hard chancres in 1871. Other disease contracted from unregistered women.

#### Section II. (d).—Conservancy.

The latrines and urinaries for the European Troops have been very efficient on the dry earth system.

Those for the Regiment of Native Infantry have not been so efficient. The principal reason was that the ablution water and urine scattered about the pavement. Sewage from them buried in pits at the manure yards. There is one yard south from the European Lines, and one north from the Native Infantry Lines.

No land manured with station sewage.

There are pucka built latrines within a distance for all the Native population in the Cantonment, kept properly clean.

#### Section II. (e).—Cleanliness of the Station.

Station generally kept very clean.

Natives' houses in the Bazar were visited and some private latrines forbidden and destroyed, being inside or too close to their dwellings.

Private compounds, encamping ground, cotton cart ground, &c. kept clean.

#### Section II. (f).—Quality of Rations supplied to Troops.

Rations generally very good.

Prices were considerably higher at the latter part of the year, owing to the deficient rainfall.

#### Section II. (g).—Other defects.

Some ruinous buildings in the compound of an old Tomb on the N. I. Lines are being repaired.

The "Kotlah," a large space enclosed in high walls and gateways and having the dwellings of religious fanatics around inside is a very unwholesome place. Epidemics are said to have had origin there—not in 1871 though. It has been kept as clean as possible inside.

The walls should be razed, or opened here and there, to allow air to pass through; great clamour has been caused by attempts in that direction formerly.

A mote, just outside Camp to the South, around a ruined palace called the "Ferria Baugh," would be better filled up or efficiently drained to prevent a recurrence of stagnant water and foul deposits.

No watering of the roads in 1871.

The ground in Cantonment is mostly too rocky to be suitable for the shallow trench system of latrines or for agricultural use.

Cholera is so frequently heard of from the District that it seems to be endemic in some places.

# Section III.—Measures adopted to improve the Sanitary condition of the Station.

Occupation of two of the new standard plan Barrack Blocks by the Battery R. H. A. Repairing and clearing obstructions from the aqueducts.

Improvements to forge of the Cavalry Regiment with the view of protecting men at work from the sun more effectually.

Spreading gravel on the ground about the Barrack buildings of the Cavalry to cause the ground to be drier during rains.

Room of Cavalry Serjeants' Mess improved by placing windows where a west verandah was open to dust and rain.

Two temporary urinaries on the ground near the new upper-storied Barracks for R. H. A.

An air shaft of the Bhingar aqueduct near new R. H. A. Barracks converted into a reservoir to supply water.

Plank ceiling for Library and Recreation Room of the Cavalry Barracks to cause the room to be cooler and less dusty.

Improvements to Cavalry Hospital, &c. said to be "under consideration."

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.—g.) already given in Section II.

- (a). Drainage of parade grounds required. More effectual drainage of the Fort Ditch, and of the Ferria Baugh mote advisable.
  - (b). Further clearing of aqueducts. Covers required over wells.

    Should be distributed by iron pipes to Barracks and dwellings.
  - (c). The third block of Barracks of the Battery R. H. A. to be completed.

Cavalry Hospital to have improvements to ventilation made by removing some surrounding buildings, enlarging the windows, downwards to the floors, and opening out verandah rooms. Wooden instead of cotton ceilings, necessary. A new ward, new female hospital, and new quarters necessary.

Cavalry workshops, very inferior, and flooring of married quarters, very inferior, improved.

(d). Better disposal of liquids from the latrines of the Native Infantry best remedied in the first instance by better Regimental supervision.

Night urinaries seem to be required for the upper rooms of the new R. H. A. Barracks. A man will most probably not take the trouble to walk downstairs but will relieve himself over the balcony railing, at the risk too of a dangerous fall out on the ground. The railing is not high enough to prevent that.

(g). It would be better if the residents on the ravelin of the Fort Ditch could be quartered elsewhere near enough to their duty. No other dwellings are available though.

It is very necessary that European Troops should each have a tinned iron washhand basin, instead of about 1 to 3.

Probably, if the sanitary state of all the native villages were improved we should hear less of cholera.

W. S. JONES, Colonel, Cantonment Magistrate.

Members.

# Sanitary Report of Asserghur Cantonment for 1871.

# Section I — Health of the Corps forming the Garrison.

The health of the European Detachments has been good.

The average strength 128, the admissions into Hospital amounted to 147, and the deaths to 2. These numbers give the ratio 1,148 admissions and 15.62 deaths per 1,000 mean strength during the year. One death was judicial, so that actually only one death occurred at the station, from phthisis pulmonalis, giving a death-rate for the station of 7.81 per 1,000 of mean strength.

Paroxysmal fevers caused  $7_0$  of the admissions, dysentry and diarrhoe about  $7_0$ , venereal about  $7_0$ . Accidents and violence caused no less than  $3_0$  of the total admissions. This might be accounted for by the bad condition of the roads and, no doubt, the intemperance of the men. A great improvement has been effected in the roads during the year. Of the venereal shown not one case was contracted at the station. A Native Matron at Rs. 5 a month, empowered to examine the prostitutes, was the only superintendence exercised, one man was invalided for phthisis pulmonalis, giving a ratio of 7.81 per 1,000 of mean strength. The health of the families was good, one child died during the year.

### Section II. (a).—Drainage within Cantonment.

The natural drainage is all that could be desired. No marshes.

## Section II. (b)—Water Supply.

From Tanks. The drinking water has been scarce since about September, the men being placed on an allowance of two gallons a day. A filter and reservoir have been built but not yet placed in operation. The quality is good if properly fitlered. Drawn by bheesties.

#### Section II. (c).—Accommodation for the Troops.

Two new Barracks and the Musjid, a mosque, appropriated for a Barrack. There was no over-crowding either in Barracks or Hospital of the European Detachments. The cubic space of the Musjid Barracks was a little below what is allowed for the plains, but it is very airily situated. It was never found too close.

A portion of the Lines erected for the accommodation of the Native Troops is at present occupied as a godown by the Commissariat Department, and some men of the Detachment here stationed have to live in Lines on the other side of the European Barracks at a considerable distance from the main body.

The removal of the Commissariat Stores to some buildings formerly occupied as a Jail has been recommended, and with slight alterations would form a far more suitable place, having a large enclosed yard in front. This would enable the whole of the men of the Detachment to be together, and the portion of the Lines that will be vacated being next that allotted as a Civil and Military Hospital will be available for the accommodation of the Hospital establishments who at present reside in the Hospital blocks, and their removal will permit of the Hospital portion being opened out for better ventilation, which is much needed.

A Guard-room is much wanted for the Detachment, with a detention room for the prisoners awaiting trial.

At present a portion of the Lines is taken for this purpose forming a room  $18' \times 10'$  with a small room  $9' \times 10'$  for stores adjoining.

A man at present undergoing simple imprisonment has been confined in the small room.

#### Section II. (d).—Conservancy.

Dry earth system well and effectually carried out in the Detachment latrines. The disposal of the sewage has always been a great sanitary defect in the Station. The soil is thrown through a platform supported by iron girders from the side of the hill and allowed to remain there. A drop of about 100 feet is attained. This platform and the Native latrines are both to windward of the New Barracks, Quarter Guard, and Cells. This should be remedied at any cost.

It is considered necessary that public latrines be built for the use of the inhabitants of the Pettah who are now obliged to use the nullahs out of Camp limits; the Cantonment fund is not in a position to meet this expense, and hence the necessity of aid from Government.

#### Section II. (c).—Cleanliness of the Station.

The cleanliness of the Station generally has been carefully attended to and there is no want of observance in the Rules on that head as regards Native Bazars or private compounds.

#### Section II. (f).—Quality of Rations supplied to Troops.

The rations have been good and sufficiently nutritive and varied to preserve health. The amount of the vegetables sufficient.

### Section II. (g).—Other defects.

The Canteen is not at all suited for the purpose. A new one should be built. In the hot season the men were allowed to have their liquor in the verandah.

There is no Female Hospital. The new Detachment having a greater number of women and children, the erection of a small Female Hospital is recommended.

A small Gymnaisum might be put up with great advantage.

The want of a Native Dispensary in the Pettah has been brought to the notice of the Chief Commissioner C. P. Under the present system travellers and others who fall sick in the Pettah are brought for treatment in the Military Garrison Hospital within the Fortress; the objection to the system is unquestionable, and the Chief Commissioner has intimated that half the expense of the Dispensary will be met from Provincial funds if the Government of Bombay will afford assistance to extent of the other half either in funds or by supplying a Native Doctor for duty in the Dispensary.

# Section III.—Measures adopted to improve the Sanitary condition of the Station.

The want of sufficient conservancy establishment for carrying out the system in the Pettah has been repeatedly brought to notice, and the consequence is that the rubbish congregates at the deposit depôts for want of sufficient means of removal. Until the present establishment is increased the sanitary state of the bazar will continue defective. A great improvement has been effected in the roads during the year. The removal of the filth platform and the Native latrine, and the new method of disposing of sewage are under consideration.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.—g.) already given in Section II.

That the filth platform and the Native latrine should be removed from before the Barracks.

A new Canteen should be built.

A small Female Hospital, with, say for four beds, and a matron's quarters attached, be built for the isolation and treatment of women and children suffering from any of the contagious forms of disease.

From the limited size of the Fort there is no inducement for the men to take exercise, a small Gymnasium might therefore be put up with great advantage.

St. JOHN O'NEILL MUTER, Lieut.-Colonel,

Commandant Asseerghur.

# Sanitary Report of Malligaum Cantonment for 1871.

### Section I.—Health of the Corps forming the Garrison.

The head quarters 10th Regiment N. L. I. has been stationed here since June 1868, and has been healthy since its arrival from Abyssinia. In the past year there has been an increase in the admissions from fever, but the disease was not generally of a severe description. There were 609 admissions and 1 death in the course of the year. Upwards of two-thirds of the admissions were from fever, of which about two-thirds were intermittent and upwards of one-third ephemeral in character. The disease was to a certain extent connected with the exceptional character of the season, which was remarkable by the high temperature in March and April, and by the failure and lateness of the monsoon. In the first three months of the rains little more than three inches were registered, and the subsequent falls were insufficient and too late to save the crops. The most noteworthy event was the comparative immunity of the Troops from epidemic disease, and, while cholera prevailed in the neighbouring districts for seven months of the year, only one case occurred amongst the men of the Regiment.

### Section II. (a).—Drainage within Cantonment.

The Cantonment is in an open plain, dry, free from jungle, with good natural drainage, the slope being towards the river Moosum, so that the heaviest fall of rain drains off to the river in the course of a few hours. There are no jheels or marshes in the vicinity. The soil is brown loam, thin and poor, resting on trap rock, which appears at the surface in different places, and it is so wanting in depth as to materially check the growth of trees in some parts.

The chief defect of the Station is owing to a number of natives having been allowed many years ago to locate themselves close to the river near the bundara above the water supply of Camp and Bazar, where they have built a village, Gowleewarra, inhabited by Gowlees and Dhers, and where there is a brick and tile factory established. This, however, cannot now be altered.

#### Section II. (b).—Water Supply.

The water supply of the Troops is derived from wells from 36 to 49 feet in depth, which are surrounded with solid masonry slope and drain, and which are kept for drinking purposes only. The wells are materially affected by the previous moonsoon falls, and last year two of them dried up in the first month of the hot season, and the majority of the men and families had to depend on the river, where the Commanding Officer had wells dug in the gravel bed, and casks sunk to ensure filtration. The quality of the water has been unfavourably remarked on by the Chemical Analyser to Government, but it has not heretofore exerted any appreciable effect on the health of the Troops or inhabitants of the Sudder Bazar. The Station is a favourite one with native soldiery, and is selected by a number of pensioners as their residence after discharge from the service. The well water is less apt to be contaminated than that of the river, which is liable to be rendered more or less impure by those located on its bank above the water supply of Camp, and by the cultivation of melons manured with night soil in the bed of the river beyond Camp limits, as occurred last year.

### Section II. (c).—Accommodation for the Troops.

The accommodation is sufficient for the present number of Troops, and the sanitary state of the Lines and Hospital is satisfactory.

#### Section II. (d).—Conservancy.

The Troops are provided with permanent latrines, which were erected in 1869, and have proved a great improvement on the former system of allowing the men as well as the inhabitants of the Sudder Bazar to resort to a field on the opposite bank of the river, which must have led to more or less fouling of the ground in the vicinity of the Lines in the rains, when women and children could hardly cross the river for the purposes of nature.

The system carried out here is the same as that which is followed by the Regiment at Poona. The latrines are furnished with iron pans, which are emptied into a tank cart twice a day, and the filth is removed to a place to leeward of Camp and to a distance from the river. The inhabitants of the Sudder Bazar resort to a field on the other side of the river, but are compelled to go a considerable distance from the bank by takeedars, who are placed there for the purpose. No part of the Cantonment is manured with Station sewage, as the place is unsuited for such arrangement, from the rocky nature of the ground, scanty depth of soil, and slope of the drainage towards the river.

#### Section II. (e).—Cleanliness of the Station.

There is no want of cleanliness of Station or Bazar, but on the contrary the state of the Cantonment was particularly remarked by the Major General Commanding P. D. A. and by the Deputy Inspector General P. D. A.

# Section II. (f).—Quality of Rations supplied to Troops.

None exists. Since the arrival of the head quarters 10th N. L. I. the inhabitants of the neighbourhood have been encouraged to bring in supplies for sale, and a market is held weekly, and a pendal with corrugated iron roof has been erected near the Lines for the accommodation of sellers of vegetables, fruits, &c.

#### Section II. (g).—Other defects.

There are no other defects requiring special notice.

# Section III.—Measures adopted to improve the Sanitary condition of the Station.

The measures adopted during the year to improve the sanitary condition of the Station have been the removal of the Sudder Bazar filth deposits from the opposite bank of the river to a considerable distance in the fields where two manure yards have been prepared to receive it. An attempt was made to purify the water in the wells by the introduction of charcoal cages, and additional temporary wells were dug in the bed of the river when the regimental wells failed, and a new substantial well has been dug to the south of the Sudder Bazar. The only works executed in the course of the year have been the conversion of two subsidiary buildings into an isolation ward and a dead house.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

The only suggestion seems to advise strict supervision of the bank and bed of the river above the camp, to preserve the water in a pure state, in case it should have to be depended on in the event of failure of the wells from a deficient monsoon, also the cultivation of melon beds should for the future be prohibited. An application on this subject was made by the Officer Commanding to the Civil authorities to prevent such cultivation, but without result, as the beds had been prepared and manured before the Magistrate's instructions were attended to.

- J. FIELD, Colonel, C. B., Commanding at Malligaum.
- T. MURRAY, Surgeon Major, 10th N. I., in charge of Staff and Details. Captain GREIG—(Absent on duty in the District) Executive Engineer.
- A. DURAND, Captain, Staff Officer.

# Sanitary Report of Poorundhur Cantonment for 1871.

## Section I.—Health of the Corps forming the Garrison.

The health of the Station during the year as taken from the European (effective) and Native population may be said to have been excellent, and no cases of disease attributable to local causes or requiring special notice occurred.

The following Table shows the Death rate and cases of mortality for the period:—

RETURN OF DEATHS FOR 1871.

	E	ROPEA	NS.	1	NATIVE	8.				
DISEASES.	Men,	Wo- men.			Wo- men.	Chil- dren.	Remarks.			
Strength.	8.67	2.40	8·10	102	64	99				
Fever		•••		1	•••	1	Most probably cases of starvation.			
Paralysis				1			An old man about 70.			
Disease of Heart		***		1			An old man about 75.			
Disease of Infancy				,		2				
Total				3		3				

Amongst the invalids sent up for change of air, ague and its concomitants prevailed largely.

This was in nowise attributable to local cases, but to the constitutions of the men being impregnated with malarious poison before arrival, requiring several weeks' residence on the Hill to shake it off.

The average strength of the invalids was 52.90, but no deaths occurred amongst them during the year.

#### Section II. (a).—Drainage within Cantonment.

Owing to the situation of the Cantonment on the natural declivity of the Hill, 1,000 feet above the level of the subjacent plain, the drainage is altogether satisfactory.

Two large artificial tanks, one on either flank of the Station, act as reservoirs for the rain and spring water, which percolates into them through the substrata, but these exercise no unfavourable influence on health.

#### Section II. (b).—Water Supply.

Between the months of June and February, the supply of drinking water is abundant, but since the obtaining of this supply has been restricted to wells No. 1 and 2, it is liable to run short during the hot months of March, April, and May. For recommendation on this subject see Section III. Para. 1.

Up to the end of 1869 water for drinking and other purposes was obtained indiscriminately from several wells, at that time a careful analysis was made of the water of the Station, and that contained in No. 1 and 2 wells was alone found fit for drinking and culinary purposes, and even these two wells were strongly suspected of sewage contamination owing to the high figure for ammonia of nitrates and nitrites as given by the analysis.

The cause of the contamination is as follows:--

I.—The shallowness of the wells in question, there not being a sufficient depth of water to allow of its properly settling.

For suggestions on this head, see Section III. Para. 1.

II.—The indiscriminate use of buckets for drawing water from these and other wells. For preventive measures on this head see Section III. Para. 3.

The situation of these wells close to the dusty public road and their exposure to the East and West winds, which blow into them at all seasons of the year, quantities of organic impurities.

For suggestions on this head see Section IV. Para. 1.

#### Section II. (c).—Accommodation for the Troops.

Including the Hospital block there is ample accommodation for 140 invalids, but the plan which now exists of using the Hospital building both as a Hospital and a Barrack cannot be too highly condemned, as invalids requiring Hospital treatment cannot be separated from their more healthy companions, and strict Hospital regimen cannot therefore possibly be observed. *Vide* Section III. Para. 2.

- 2. There is no proper Guard-room in the Station. A building known as the Guard-room exists in the Hospital precincts, but this is useless for the purpose required, owing to its distance from Barracks, and besides belongs to the Hospital, and is constantly required for Hospital purposes. *Vide* Section IV. Para. 3.
- 3. The position of the Cells is considered dangerous, on account of its elevated unprotected situation. Vide Section IV. Para. 17.

#### Section II. (d).—Conservancy.

- 1. The latrines and urinaries at present in use for the Troops are in good order. The dry-earth system is in use in all of them, and when this is strictly carried out the buildings themselves and neighbourhood are comparatively free from unpleasant odour.
- 2. There is no latrine proper belonging to No. 1 Barrack, the men in that using the one immediately behind No. 2 Barrack. In a sanitary point of view this is a most serious defect, more especially in the case of invalids in a low state of health, who may have to use the latrine by night, and for whom the distance is too far, and the night air injurious. For recommendations see Section IV. Para. 4.
- 3. There is no latrine to the Hospital Serjeant's quarters, this in the case of a married man with a family is a most serious deficiency, as it cannot be expected that a woman and female children can use the same latrine as the soldiers. For recommendation see Section IV. Para. 3.
- 4. There is no latrine to the school-room, this is a source of great inconvenience both to the children and the Schoolmaster, as the work of the school is interfered with through the children and convalescents having to go to their respective homes to obey the frequent calls of nature. For recommendation see Section III. Para. 6.
- 5. No latrine exists for the Natives attached to the Sanitarium numbering in ordinary times some 250 souls, and the consequence of this is that the hill sides are constantly being defiled.

This in a sanitary point is of the utmost importance. The subject has already been brought to the notice of the proper authorities, and a public latrine it is believed has been sanctioned. See Section III. Para. 4 and Section IV. Para. 14.

F 18

6. The system of latrine conservancy as at present in force, is decidedly bad. The filth from the different latrines is carried in small uncovered iron receptacles on the heads of the sweepers and buried in a spot on the S. E. side of the Hill, specially told off for the purpose, but as this spot is a considerable distance from some of the Barracks and private bungalows, ample scope is afforded to lazy sweepers to evade the rules and to deposit the filth on the most convenient part of the Hill side that their laziness suggests; a proper filth cart is much required. For suggestions see Section III. Para. 5 and Section IV. Para. 15.

#### Section II. (e).—Cleanliness of the Station.

The Station of Poorundhur may be looked upon as a model of cleanliness as regards the Station itself and the Bazar, some of the uninhabited compounds require looking to, but this matter is already in the hands of the proper authorities. *Vide* Section III. Para. 6.

#### Section II. (f).—Quality of Rations supplied to Troops.

The prices charged by the few shopkeepers on the Hill are very much higher than the ordinary market prices of the neghbouring villages, a matter of much inconvenience and distress to the Native followers, who often have a difficulty in procuring even the commonest necessaries of life. *Vide* Section IV. Para. 22.

#### Section II. (g.)—Other defects.

- 1. There is no proper bath-room for the invalids, one small room with three half porter casks in it exists in the vicinity of No. 2 Barrack; but this does not afford sufficient space either for health or cleanliness. *Vide* Section IV. Para. 7.
- 2. There is no proper quarters for the Purveyor of the Sanitary Hospital; a small room at the end of the 2nd Class Servants' houses is said to have been built for the purpose, but as it is a mere hovel without any cook-house, latrine, or proper verandah, it could not be expected that any one holding the respectable and responsible post of Purveyor could live in it. *Vide* Section IV. Para. 8.
- 3. The accommodation for the 2nd Class Hospital Servants is on sanitary grounds totally insufficient. There are twenty-two 2nd Class Servants attached to the Hospital, and only accommodation for twelve, and part of this accommodation is not partitioned off, so that as in the case of the Bhistie and Dhooly-bearer, more than one family are living in one room. The present quarters are in a most exposed situation, open to the full force of the monsoon, without any protection whatever to shelter them, so that during the rainy months they are never dry, as the mere fact of opening the door fills the room with rain or mist. There are also no means of these servants performing their ablutions, and they have no other way of doing so but in front of their houses exposed to the public view. There is also no latrine for them nearer than the one below the Hospital on the new Bazar lines, and as this is so far off as to take about 40 minutes to go and return, it is highly inconvenient, not only for the Hospital which can ill spare its servants for so long a time, but for the families of the servants themselves, who cannot be expected to go such a long distance. For recommendation on all these heads, see Section IV. Para. 9.
- 4. There is no accommodation for the Barrack-room cooks, consequently in spite of all vigilant measures the cook-rooms are too often used as dwelling places by their servants—a practice that cannot be too highly condemned. Vide Section II. Para. 10.
- 5. The Canteen and Coffee-shops floors are made of earth, and owing to the great and constant traffic in them they are in a continued state of disrepair, a matter of much discomfort to all frequenting them. For recommendations see Section IV. Para. 13.

- 6. The uninhabited private bungalows and one or two of those occupied through necessity are in a disgraceful state of disrepair and dilapidation, and in their present condition are likely to be injurious to health. For suggestions on this head see Section III. Para. 6, and Section IV. Para. 16.
- 7. There is no proper accommodation for the Schoolmaster and Quartermaster Serjeant, consequently the latter being a married man is obliged to occupy one of the quarters in the Patcherries, which is especially intended for Invalids. *Vide* Section IV. Para. 11.
- 8. There is no Hospital accommodation for the Natives on the Hill. This is on sanitary ground a most serious deficiency at all times during the year; there are some 250 Natives, men, women, and children connected with the Sanitarium, and during the Invalids' season and when any work is being carried on by the Public Works Department, this number is largely increased, yet there is no means whatever for treating these people (except in their already overcrowded dwellings) should disease occur amongst them. This is a matter requiring the most urgent and serious attention, as should an epidemic break out in the Station, the consequence might be most serious to the whole community. Vide Section IV. Para. 12.
- 9. There is no drying room in the Station, and consequently no means of drying wet clothes during inclement weather, except in the Barrack-rooms. This at all times and under all circumstances is objectionable, but more especially so in the case of Invalids; and taking into consideration that during the months from June to October the atmostphere is continually charged with moisture. Vide Section IV. Para. 18.
- 10. During the four monsoon months the Invalids and Sanitarium servants have no waterproof coats, and consequently are constantly getting wet in the performance of their duty, to the injury of health and detriment of the Public service. *Vide* Section IV. Para. 19.
- 11. The practice of killing the Ration meat and hanging it in a room under the Bakery roof is highly objectionable, as it impregnates the air with the smell of stale flesh, attracts flies, and is likely in consequence to affect the quality of the Ration bread. *Vide* Section IV. Para. 20.
- 12. There are no seats on the road from the foot to the top of the Hill, and Invalids are obliged to rest on the rough ground in consequence, which is objectionable. This also applies to the walks round the Hill, for which there are not sufficient seats. *Vide* Section IV. para. 20.
- 13. The position of the Bazar is highly inconvenient owing to its difficulty of access. Vide Section IV. Para. 22.

# Section III.—Measures adopted to improve the sanitary condition of the Station

To obviate, if possible, the chances of the drinking water running short, a sentry has been placed over Nos. 1 and 2 wells, and the drawing of water from them restricted to certain hours of the day.

- 2. No. 2 well has been somewhat deepened.
- 3. Care has been taken to prevent mussacks and buckets, used for drinking and culinary water, being employed for any other purpose. Application has been made to the Medical authorities to sanction the issue of extra mussacks and buckets to the Hospital, in order to carry out this sanitary measure. Sanction not yet granted.
- 4. The want of latrines for Natives has been duly noticed in the Monthly Sanitary Report since August last, and was specially brought to the notice of the authorities by a letter from the Officer in Medical charge on the 29th September 1871. It is believed that a latrine has been sanctioned, but as yet no steps have been taken for its erection. Vide Section II. (d), Para. 5.

5. The want of a proper filth cart and Conservancy establishment has been noted in the Monthly Sanitary Reports and was especially brought to the notice of the authorities by a letter from the Officer in Medical charge dated 29th September last. No filth cart has yet been supplied. *Vide* Section II. (a), Para. 6.

The dilapidated state of the unoccupied private bungalows was on sanitary grounds brought to the notice of the authorities in October last by the Officer in Medical charge. It is believed that orders were given by the Major General Commanding the Division that the bungalows in question were to be repaired immediately by their respective landlords, but although three months have elapsed since then, no proper steps have been taken in the matter by them. *Vide* Section II. (a), Para. 6.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a - g) already given in Section II.

- 1. It is suggested that Nos. 1 and 2 wells be considerably deepened, so as to allow of them holding a larger quantity of water than they do at present. It is also strongly recommended that they be covered in and placed under lock and key, so as to prevent impurities being thrown into them and at the same time prevent the water being taken away indiscriminately for other than drinking and culinary purposes. It is also suggested that a bucket and rope be attached to each of these wells, so as to prevent the water being contaminated by those used for water for other purposes. Vide Section II. (a).
- 2. It is most strongly and urgently recommended that the whole of the buildings, known as the Hospital block, with all its outhouses, be handed over to the Officer in Medical charge, and when any portion of it is required for the accommodation of invalids, arrangements be made with him, so that the most delicate and most likely to require treatment be quartered therein. Vide Section II. (c), Para. 1.
- 3. It is suggested and recommended that a Guard-room be erected in the vicinity of the Barracks. Vide Section II. (e), Para. 2.
- 4. It is recommended that a latrine and lavatory be erected for No. 1 Barrack on its north flank. Vide Section II. Para. 2.
- 5. It is most strongly recommended that a latrine and bath-room be erected for the Hospital Serjeant's quarters. Vide Section II. (d), Para. 3.
- 6. It is most strongly recommended that a latrine be erected for the School-room. Vide Section II. (d), Para. 4.
- 7. A proper and commodious bath-room in a central position is most urgently required. Vide Section II. (d), Para. 1.
- 8. A proper house for the Hospital Purveyor is most urgently required. It is recommended either that a suitable house be built for him in the vicinity of his stores, or that he be allowed to occupy as a permanency the building known as the Hospital Guard-room, and where he at present resides by order of the Major General Commanding the Division. Vide Section II. (a), Para. 2.
- 9. Recommended most urgently on sanitary grounds that the present accommodation for 12 Second Class Hospital Servants be properly partitioned off into twelve separate rooms, that ten extra quarters should be built, that the whole building be protected from the weather, along its front, by a suitable verandah, and that a latrine and room for ablutionary purposes be erected in its close vicinity. Vide Section II. (a), Para. 3.

- 10. Recommended that suitable accommodation be puthe vicinity of their respective cook-rooms. Vide Section I
- 11. Recommended that two Class A Staff Serjeants' accommodation of the Schoolmaster and Quartermaster Para. 7.
- 12. Recommended most urgently that a Hospital be of the Native followers and residents connected with the Para. 8.
- 13. Recommended that the floors of the Canteen and in lieu of the earth-floor now in use. Vide Section II. (a),
- 14. Recommended that the latrines for Natives, : Vide Section II. (a), Para. 5.
- 15. Recommended that a filth cart with a proper con supplied. Vide Section II. (d), Para. 6.
- 16. Recommended that the private bungalows, no handed over for repair to the Public Works Departments, them in order. *Vide* Section II. (a), Para. 6.
- 17. Recommended that new Cells be constructed i built in proximity to the Guard-room. Vide Section II. (
- 18. A proper drying-room for the Station is urgently Para. 9.
- 19. Waterproof coats and cloaks for the protectio servants in the performance of their duties in the mons *Vide* Section II. (a), Para. 10.
- 20. A place apart from the Bakery ought to be tol and sheep, and a proper detached, well ventilated room c Section II. (a), Para. 11.
- 21. A sufficiency of seats is much required to place use of invalids. Vide Section II. (g), Para. 12.
- 22. A grant of land and sanction and aid to build of the Hill convenient to the Barracks is strongly recomm
- 23. It is suggested that if instead of selling all the at present, a portion be set apart for the feeding of Gover improve their condition.

# Sanitary Report of Sholapoor Cantonment for 1871.

#### Section I.—Health of the Corps forming the Garrison.

At present there is but one Regiment, the 28th B. N. I., at Sholapore, the health of which has been fairly good during the past year. The total number of treated during the year was 701, and the total number of deaths 3. Two from lung complaints and one from peritonitis following a syphilitic bubo. There has been a large increase in the number of cases of venereal in the Regiment, due nearly entirely to the absence of any supervision over prostitutes in this place.

The other diseases in which there has been an increase are due entirely to climatic influences and the very exposed state and situation of the lines. The health of the European community in this place has been very good, with the exception of among the railway officials who reside down close to the Station, and who have suffered considerably from fever, this is only the effect of bad quarters. There has been one death, the child of the Ordnance Conductor, aged 10 months, from an abscess in the parotid and sub-maxillary glands.

#### Section II. (a).—Drainage within Cantonment.

The drainage of the Station is entirely natural and very good, on account of the position of Camp on the top of a slight ridge. It is difficult to keep the Camp clean, owing to the fact that the entire Cantonment fund has been appropriated by Government and consequently hardly any funds are available for that or any other purpose. There is a small jheel close to Camp in the Motee Bagh, but I am of opinion that it does not produce any deleterious effect on the health of the people resident in its neighbourhood.

The drainage of the lines is defective in one respect. There are urinals in the huts of the married men, the water from which is simply carried off into the lines the front of the hut and there permitted to dry up.

#### Section II. (b).—Water Supply.

The water supply is good, but is in danger of contamination owing to the chief sources of water, the tank close to the railway and the small one in the Motee Bagh, being removed from Camp limits. Formerly when these tanks were under Military control, no bathing or washing clothes was allowed in them, now that they are under the control of the Civil authorities both these practices are carried on to a considerable extent, and the water must in time become contaminated.

The supply for the sepoys is good, there being a large well of very good drinking water supplied by springs close to the lines. This, however, may be slightly contaminated by the dried up salts of urine being washed down into it from the lines after a heavy fall of rain.

### Section II. (c).—Accommodation for the Troops.

The accommodation for the troops is very good, the lines being nearly new. The Hospital is rather small, being only capable of holding 30 beds, whereas according to latest orders Native Regiments are entitled to a Hospital capable of accommodating 50 patients. A ward for eye patients is a thing the want of which is very much felt, as in a place like this, where there is a constant glare and frequent dust-storms, cases of inflammation of the conjunctive are by no means uncommon.

A dead house is also required.

#### Section II. (d).—Conservancy.

The conservancy of the lines and Camp is good. The only exception being the filthy and disgraceful latrines of the Regimental Hospital, which no amount of care or disinfectants can free from an overpowering stench.

The Station sewage is all conveyed without Camp limits and buried.

#### Section II. (e).—Cleanliness of the Station.

The Station is as clean as can be expected considering the want of funds.

The Native Bazars are not within Camp limits.

# Section III.—Measures adopted to improve the Sanitary condition of the Station.

No measures have been adopted during the year to improve the sanitary condition of the Station, as no circumstances have arisen to call for any such, but if any had been required it would have been impossible to carry them out, owing to the want of any funds.

# Section V.—Suggestions for remedying any of the defects still existing under the several heads (a-y) already given in Section II.

I should suggest for the purpose of taking precautions against the contamination of the water mentioned on pages 9 and 10 that the Railway Tank and Motee Bagh be both included in Camp limits, so that they may be once again placed under the supervision of the Military authorities. I should also suggest that a Lock Hospital be re-opened for the proper supervision of the prostitutes here.

- C. A. MOYLE, Colonel, Commanding at Sholapore.
- A. J. LEGGATT, Assistant Surgeon 28th N. I., late Staff Surgeon.

# Sanitary Report of Esplanade Board of Health, Bombay, for 1871.

#### Section I.—Health of the Corps forming the Garrison.

Troops located at Bombay-

19th Regiment N. I.

11th Regiment N. I. (2 Companies).

21st Regiment N. I. or M. B.

#### Annual strength 1,598.

The health of the Native Troops has not been so good during the past year as it was in 1870. The admissions in Hospitals have been 1,495, 639 more than in the previous year, when the annual strength was 2,144. There has been an unusually large proportion of fever cases which the Board attributes to the foul exhalations from the Sonapore drain in the vicinity of the lines. No mortuary statistics are available.

#### Section II. (a).—Drainage within Cantonment.

The sanitary condition of the Marine lines is far from satisfactory owing to the defective construction of the Sonapore drain. The mephitic effluiva thrown off from this drain is most prejudicial to the health of the men of the 21st Regiment N. I. It is found that the recovery of patients in Hospital is greatly retarded from this cause: indeed in most intances it is neces-

sary to send them away for change of air. The lines of the 11th and 19th Regiment N. I. are nearly surrounded by nuisances of the gravest kind; on one side is a depôt for the offal of the Crawford Meat Market, the ordure depôt, and embankment from which the town sweepings are discharged into the railway trucks, on another are the lines, stables and refuse carts of the sweepers, and on a third a very large latrine and the Town Bazar. The Sonapore drain nuisance has been constantly reported on by the Esplanade Board of Health, and the Government has lately directed its Solicitor to take action against the Municipal authorities with reference thereto, and it is to be hoped that something may be done immediately to remove the evil. The detachments 11th and 19th Regiment N. I. have been removed from Boree Bunder and encamped on the Esplanade in tents, but the families still remain in the lines, and so long as they do so the married men will naturally resort constantly to the place. Early in the morning and at other times during the day when the ordure depôt is being worked, the whole atmosphere is impregnated with fœtid exhalations from human ordure and surcharged with the impalpable dust from the town sweepings. It is unreasonable to expect under such circumstances that the men should retain the vigour of health so necessary for the efficiency of the soldier. Although there is not much serious illness amongst the Native Troops and their families at present, should any epidemic break out, it is much to be feared that the mortality would be very great.

### Section II. (b).—Water Supply.

The water supply is good. The drinking water is entirely supplied by the Vehar main, and there are several wells in the vicinity of the lines which yield sufficient water for washing and other purposes.

### Section II. (c).—Accommodation for the Troops.

There is sufficient accommodation for the Native Troops, but in the lines of the Marine Battalion the streets between the pendals are very narrow and there is not sufficient ground to admit of their being widened. These lines were built many years ago when a much smaller space was allowed for the lines of a Regiment than at present.

#### Section II. (d).—Conservancy.

There are no urinals in the lines and only one small latrine in the Marine lines for the use of patients in the Hospital; one has been built in the Boree Bunder lines. The men of the Marine Battalion make use of the public latrine at Sonapore. There are no defects in these latrines.

#### Section II. (e).-Cleanliness of the Station.

Not generally, but there has been a great want of cleanliness in the lines of the Municipal sweepers at Boree Bunder, and it is found extremely difficult to enforce habits of decency and order amongst these people.

### Section II. (f).—Quality of Rations supplied to Troops.

No Rations are issued to the Native troops, grain compensation has been received by them monthly, and there is no unusual deviation in the market price of the food.

### Section II. (g).—Other defects.

No defects beyond those pointed out in Section I.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

As stated in Section I. the Native Troops have lately been moved out of the Boree Bunder lines and encamped on the Esplanade, and the Municipal Commissioner has been directed by Government to remove the Sonapore drain unisance.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

The Board has no further suggestions to offer beyond recommending that the Sepoys' families be removed as soon as possible from the Boree Bunder lines.

S. THACKER, Colonel, President.

J. GILBERT, Surgeon Major,

J. BARNARD, Lieut., Barrack Master. JOHN BECKE, Captain, and Secretary. Members.

# Sanitary Report of the Colaba Board of Health for 1871.

Troops located at Colaba—

Head Quarters 6th Brigade R. A.

2/6 Royal Artillery.

3/6 Royal Artillery.

6/6 Do.

83rd Regt. of Foot (2 Companies).

# Section I.—Health of the Corps forming the Garrison.

The health of the various Corps forming the Garrison during the year has been very good. There was no marked difference in the health of the 3 Batteries or Infantry detachments.

The diseases most prevalent were—fevers of the intermittent type and hepatic affections attributable to climate.

The health of the Native community attached to the various Corps has also been excellent. 5 deaths occurred among the Troops from the following diseases, viz.:—

In No. 3/6th Brigade R. A., 1 from "apoplexy" induced by drink.

In No. 6/6th Brigade R. A., 1 from remittent fever and 1 from "hepatitis".

In Detachment 49th Regiment, 1 from remittent fever, and 1 from gun shot wound of left thigh, and pelvis (homicidal). Total 5 deaths.

The average strength of the Royal Artillery stationed at Colaba has been 215-91, and that of the Detachment of the 49th Regiment 254-83.

# Section II. (a).—Drainage within Cantonment.

During the monsoon the water of the heavy or continuous rain, was found to lodge on parts of the main ground in the lines, disappearing by evaporation and soakage. The defect was reported, and was to some extent remedied by the Executive Engineer. Before, however, the drainage in the lines can be pronounced good, additional drains will be required to assist in carrying off the water after heavy rains.

There were no jheels or marshes in the Station or its vicinity.

#### Section II. (b).—Water Supply.

The water supply for the Troops has been from the Vehar Lake works; pipes convey it to the Barracks.

The supply has been sufficient for all ordinary requirements, and the quality good.

# Section II. (c).—Accommodation for the Troops.

The accommodation has been sufficient, and there has been no over-crowding either in Barracks or Hospital. Attention however is invited to the huts or Patcherries in which the married soldiers and their families are accommodated. They are extremely bad in construc-

tion and badly situated. Each family, it is true, is provided with separate quarters, but these are very defective in accommodation, excessively small, imperfectly ventilated, and in every respect unsuitable, considering the climate of Bombay, for a European with his wife and children.

### Section II. (d).—Conservancy.

Conservancy satisfactory so far as the latrines and urinaries for the Troops are concerned.

Urine and dirty water are emptied into the sea, and the night-soil carried away in closed iron receptacles to the Boree Bunder, and disposed of under Municipal arrangements.

There are no latrines for Natives. The Natives have to resort to the foreshore, on the Harbour side, where ground is marked off for them, below high-water mark.

#### Section II. (e).—Cleanliness of the Station.

No want of cleanliness in the portion of Upper Colaba belonging to the Military. Some of the houses and huts occupied by Natives under the Collector, require attention on this point.

#### Section II. (f)—Quality of Rations supplied to Troops.

#### None.

#### Section II. (g)—Other defects.

The want of latrines for Natives to resort to at Colaba is a defect of the utmost importance. This has been brought to notice by the Board from time to time since December 1870.

The want of Dhobee Ghauts is another evil, which has been in a way met by prohibition of Dhobies to wash in Colaba. This has also been prominently brought forward, as the Board are of opinion that in a large city like Bombay the clothes of the soldiers should not be mixed indiscriminately with those of the populace, or taken after being washed into hovels, where disease or infection may have existed, or is existing.

- 3. A suitable site for the men, and for their cows and buffaloes, which supply the Troops with milk, is much needed, and has been frequently brought to notice.
- 4. The high walls, many of them standing 8 feet, excluding all free ventilation, should be reduced to 4 feet, and part of an old wall of Bungalow No. 238, occupied by a Parsee, "Rustomjee Framjee," should be removed altogether, as it conceals a very offensive and dirty drain.
- 5. The married quarters of the soldiers, behind the Church, are defective in ventilation, construction, accommodation, and site.
- 6. Wall of Sanitarium Hospital too high, and Native huts and drains opposite are very objectionable.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

- 1. The levelling of the ground by the Lunatic Asylum, Upper Colaba.
- 2. Removing Native huts both near the Grave-yard and the Regimental Bazar.
- 3. Closing many cesspools and open drains, and an iron receptacle having been supplied to many of the houses for receiving dirty water.
  - 4. All Native latrines removed from within Officers' compounds and other Bungalows.
- 5. Ground marked out by flags, on Harbour side below high-water mark for Natives to resort to, to obey calls of nature.
  - 6. Dhobies and others prevented from washing clothes round several wells.

- 7. Hedges and trees in all compounds requiring it, have been trimmed.
- 8. The rearing or keeping of swine has been prevented.
- 9. European Police from the Troops instituted to prevent any infringement of the Sanitary Rules.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

- "A". Drains be constructed to carry off the water.
- "B". No suggestion to offer.
- "C". From the position in which the married quarters referred to are situated, together with the fact that they are extremely bad in construction, it is recommended that new Patcherries be constructed on a better site.
- "D". Conservancy satisfactory so far as the latrines for the Troops are concerned. Urine and dirty water is emptied into the sea, and the night-soil carried away to the Boree Bunder, where it is disposed of under Municipal arrangements.
- "E". No want of cleanliness in the portion belonging to the Military; some of the houses and huts occupied by Natives under the Collector require attention.
  - "F". None.
  - "G". 1. Latrines for Natives should at once be erected at Colaba.
    - 2. Dhobies' Ghauts established.
    - 3. Suitable sites for keeping milch cattle decided on.
    - 4. Walls reduced to 4 feet.
    - 5. New quarters should be constructed for married Soldiers.
      - J. C. HAILES, Colonel, R. A., Commanding R. A., Bombay, President.
      - C. C. DEMPSTER, Surgeon R. A., In Medical charge of Troops, Colaba.
      - G. MEREWETHER, Captain, R. E., Acting Executive Engineer > Members.

        Bombay Defences.
      - W. GRAHAM, Quarter Master 6th Brigade Royal Artillery.

# Sanitary Report of Declalee Cantonment for 1871.

#### Section I.—Health of the Corps forming the Garrison.

There have been no Corps stationed here permanently but Regiments and Detachments continually passing through the Station. The general health has been very good, cases of slight ague originate now and then among the Europeans employed at the Station and also among the Natives.

The Medical Officer in charge is not aware of any other endemic disease.

# Section II. (a).—Drainage within Cantonment.

1. The manure yard is very near the main road to Nassick, and as the space set apart is becoming filled, it is desirable that another site should be selected and taken into use.

2. There are no defects in the superficial drainage nor do any jheels or marshes exist in the vicinity.

#### Section II. (b).—Water Supply.

- 1. The water supply for the Camp is from eight wells at from 20 to 30 feet deep. It is both very good in quality, and ample in quantity. It is not subject to contamination of any kind excepting by articles dropped in by birds, the wells being uncovered.
- 2. The wells are cleaned out every three months. The water is drawn by leathern buckets and conveyed by puckalie bheesties.

## Section II. (c)—Accommodation for the Troops.

There has been no over-crowding and no defects in the buildings "excepting that a handrailing fixed around the verandahs would prevent accidents"; two Bungalows have thus been provided and the other Barracks are in course of being fitted with an iron rail.

### Section $\Pi$ . (d).—Conservancy.

The conservancy by means of the dry-earth system is good, and the liquid and solid excreta are removed in air-tight receptacles once daily at 8 o'clock r. m. to the manure yard.

A large store for dry-earth is much wanted.

The necessaries for the Native population are kept clean and removed in a similar manner.

# Section II. (e).—Cleanliness of the Station.

#### None.

### Section II. (f).—Quality of Rations supplied to Troops.

The Rations have been fair on the whole. The bread was for some months inferior but it is now of better quality.

#### Section II. (g).—Other defects.

The Natives in the vicinity of the Cantonment, but outside Camp limits, commit nuisances and defile the neighbourhood, this has been remedied on the North by the removal of the Native squattors, but still exists on the South side of the Station.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

Trees have been planted, fresh drains have been dug, and old ones cleaned out, inequalities in the ground have been levelled and filled in. Culverts have been made in many places; and two extra wells have been taken into use during the year.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

- 1. The want of a Police Force is much wanted to enforce cleanliness amongst Natives in the vicinity of the Cantonment but outside Camp limits.
  - 2. It is recommended that the wells should be covered.
    - E. MEURANT, Major, and Commandant, President.
    - W. R. HOUGHTON, Lieut.-Colonel, Executive Engineer, N. D.
    - ANDREW SEMPLE, M. D., Staff Surgeon.
    - G. DRUITT, C. S., Assistant Magistrate.

# Sanitary Report of Belgaum Cantonment for 1871.

#### TROOPS LOCATED AT BELGAUM.

A/18 Brigade R.A.

6th Regiment N. I.

2nd Regiment of Foot (1st Battalion.)

12th Regiment N. I.

#### Section I.—Health of the Corps forming the Garrison.

According to reports received from the several Medical Officers in charge of Regiments, the health of the Troops has been on the whole very good during the year.

That of the general community both European and Native has also been very fair.

Belgaum enjoys generally an immunity from epidemics. Cases of cholera are seldom known, at least in Cantonments, and those of small-pox few in number.

There are many fever cases during the cold season when the East-wind prevails, but it would seem that in this respect also Military Cantonments are freer than the surrounding Districts.

### Section II. (a).—Drainage within Cantonment.

Drainage defective, more particularly so in the Bazar. For remedying the latter no funds are available.

#### Section II. (b).—Water Supply.

Water supply ample and water good; fails somewhat at the end of the dry weather, at which time the opportunity is taken of deepening wells:

Cases of guinea-worm few in number.

# Section II. (c).—Accommodation for the Troops.

Barrack accommodation ample and the Lines for Native Regiments recently erected of a superior kind.

The Hospital accommodation for Native Regiments is, however, reported insufficient.

#### Section II. (d).—Conservancy.

The Government Garden is manured in parts with station sewage and the plan appears to answer well. Area 59 acres 1 R. 5 P. 123 yards.

Trench latrine not found to answer, particularly in the wet season. Attendance at latrines, unless made compulsory, small.

## Section IL (e).—Cleanliness of the Station.

The want of some subordinate in lieu of the Kotwal lately removed is much felt, more so owing to the inefficiency of the Police, or rather Chowkedars paid by Bazar residents.

Compounds are kept in a cleanly state and only in the wet season some difficulty is experienced in keeping under the growth of weeds.

#### Section II. (f).—Quality of Rations supplied to Troops.

Rations supplied of good quality.

Deviation in price of articles of food not great, only affected as in other places by the state of the seasons and such natural causes.

Digitized by Google

#### Section II. (g).—Other defects.

Many of the houses in the Sudder Bazar are of a very inferior description not admitting of ventilation, though frequently over-crowded with occupants. It is difficult to point out a remedy for this, as there are so many residents of the poorer classes quite unable to make even the smallest outlay for the improvement of their dwellings.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

Trees removed where superabundant growth was found.

Increased accommodation in European Barracks and Native Lines.

System of Native latrines improved.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

Walls round wells in some parts of Cantonments wanting, or broken down, and might be erected or repaired at little cost.

- C. ADAMS, Brigadier General, Commanding B.D.
- R. RICHARDS, Colonel, Commanding H. M. 6th Regiment.
- W. HICKS, Major, Brigade Major.
- C. J. SYLVESTER, M.D. Surgeon Major, Civil and Staff Surgeon.
- W. H. MASON, Major, Secretary to Cantonment Committee.
- E. D'O. TWEMLOW, Captain, Executive Engineer B.D.

# Sanitary Report of Kolapore Cantonment for 1871.

#### TROOPS LOCATED AT KOLAPORE.

#### 14th Regiment N. I.

#### Section I.—Health of the Corps forming the Garrison.

H. M. 14th Regiment N. I. only arrived at this station on the 29th November 1871.

No record of the extent of sickness and mortality during the year 1871, exists.

Nothing has yet occurred to lead to the supposition that there is any predisposing local cause of disease.

#### Section II. (a).—Drainage within Cantonment.

No defects whatever: the Camp appears to be singularly well situated in this respect.

# Section II. (b).—Water Supply.

The water supply in Camp is derived from 12 wells.

From enquiries instituted the water supply is scanty, i.e., 10 out the 12 wells have, in the hot season, an insufficiency of water.

Of the above 12 wells, 4 are set apart for the use of the Native Infantry Regiment, and Regimental Bazar: 2 of these, that used by the Purwarres, and the one set apart for the Hindoos, become, the latter partly, and the former totally dried up during the hot season.

Enquiries have failed to bring home to the state of the wells any sickness whatever.

## Section II. (c).—Accommodation for the Troops.

The Native Infantry Lines contain sufficient accommodation for the authorized strength of a Native Infantry Regiment.

The Hospital is very roomy, well ventilated, and all the arrangements are excellent.

#### Section II. (d).—Conservancy.

The trench system having been adopted, is under observation.

The latrines are not used.

#### Section II. (e).—Cleanliness of the Station.

None.

The Regulations as per Separate General Orders, Section "Cantonments and Quarters," Paras. 11—13 are thoroughly carried out in this Station.

# Section II. (f)—Quality of Rations supplied to Troops.

The food supplied to the Troops here is good in quality, and there is no material difference between the prices which obtain in the town of Kolapore, and those in the Camp Bazar.

#### Section II. (g).—Other defects.

None.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

Except the opening up of side drains, culverts, and nullahs, and cleaning wells, for which purpose the Cantonment Local Funds are doubtless available, there appear to be no other measures to be taken: but at the same time, it seems to the Committee to be highly desirable, that many of the old wells in Camp should be deepened considerably, and also that new ones should be dug.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

Nil:—with the exception of the suggestions at page 21 of this report, as regards the water supply.

- F. S. HEWETT, Lieutenant Colonel, Commanding at Kolapore.
- P. H. GREIG, Captain and Staff Officer.
- C. MANT, Captain R. E., Executive Engineer.
- R. CALDECOTT, Assistant Surgeon.

# Sanitary Report of Dharwar Cantonment for 1871.

### TROOPS LOCATED AT DHARWAR.

7th Regiment N. I.

### Section I.—Health of the Corps forming the Garrison.

During the past year six hundred and ninety-seven cases have been admitted into Hospital. Twenty four remained on the 1st January 1871, making the total treated seven hundred and twenty-one.

The percentage of treated to strength has been 120·1—of deaths to strength 0·50—of deaths to treated 0·27.

The daily average of sick has been 32.3. Some deaths have occurred: one from asthma, one from intermittent fever and dysentery, and one from accidental drowning.

The prevailing diseases have been: intermittent fever 207, contusions 116, and guinea-worm 75.

Though the return for the past year shows a very considerable number of admissions, I do not think the health of the Regiment on the whole has been bad; the great majority of the cases were of a very trivial nature, the patients as a rule only remaining in Hospital for 2 or 3 days. There has been a decrease in the death-rate among those who came into Hospital for treatment. In 1870 four deaths occurred; in 1871 two.

# Section II. (a).—Drainage within Cantonment.

The Cantonment itself is very well drained; there are no marshes in the Station or its vicinity.

## Section II. (b).—Water Supply.

The water supplied to the Regimental Lines is chiefly obtained from tanks. It is by no means good and has been found to contain about 4.8 grains of organic matter to the gallon, besides a large quantity of oxide of iron.

Samples of the water have been sent to the Chemical Analyser to Government, who has reported the various samples as "D, bad"; much organic matter of an objectionable nature.

#### Section II. (c).—Accommodation for the Troops.

The Hospital is a very good one and affords ample accommodation for the sick. The ventilation is good. Arrangements for ridge ventilation would be desirable, as at present there are no outlets in the roof for the escape of the hot air at night time.

There is no Dead-house attached to the Hospital, and the want of one is much felt-

There are no quarters for the 2nd Class Hospital Servants, they have to live in the Native Town, which is some distance from the Hospital; frequently at night time when required they cannot be found, which is very inconvenient.

The Lines are bad, having been built some forty years ago. No regular streets, but the houses struck down here and there without any attempt at regularity; the huts themselves are of different heights and sizes, many continually requiring repairs; moreover they are close on the Town; however, with all these disadvantages sanitary arrangements are carried out with benefit, and the ground on which the Lines are built is well drained.

#### Section II. (d).—Conservancy.

There are no regularly built latrines for the Troops at this Station, nor are there any urinaries. The only attempt at latrines are two trenches screened off with matting in a small field to south of the Lines; these trenches are periodically filled in and the screens removed to new trenches a short distance off. The field allowed for this purpose is exceedingly small, and part of it is occupied as a slaughtering ground by the butchers of Dharwar: more ground will not be granted by the Civil Authorities. The men of the Regiment owing to the scanty accommodation afforded for the purpose are permitted to proceed for necessary purposes the distance of a mile from the Station to the southward, Takeedars being posted to prevent any one making use of ground nearer: altogether nothing can be more unsatisfactory than this part of the conservancy arrangement for the Troops. The people of the Town are supposed to have matting screen latrines in different parts of the Town, but all those living on the outskirts to the northward of the Town and of the surrounding snourbs of Dharwar adopted the usual plan in native villages, going for the purposes of nature far or near

just as suits their convenience. Those of the northern outskirts using the fort ditch for the purposes of nature which is extremely offensive, and measures should be adopted to prevent such defilement, but there being no Military limits, Dharwar being a Civil Station, I am powerless and can only grumble. The only conservancy under immediate charge of the Military are the Lines and the Fort which are kept under strict conservancy surveillance.

# Section II. (e).—Cleanliness of the Station.

Taking the Station as a whole it may be said to be clean; also the Native Bazars in the Town are well kept by the Municipality, but to any one accustomed to the strict conservancy of Cantonment, it is offensive to a degree to see holes here and there in which the sweepings and rubbish of the compounds are thrown—though not olfactorily offensive they are to say the least of it unsightly. The Fort in which most of the Military Officers live is through the kindness of the Civil Authorities handed over to the Commanding Officer for conservatory arrangements and is kept as clean as constant supervision can make it. The compounds of the houses in the Fort are not strictly under the Military conservancy, any one can dig holes, &c. in their compounds and fill them with rubbish. Ex. g., supposing a bungalow in the Fort is inhabited by an Officer of the Regiment, he on my desire will refrain from digging rubbish holes, &c. in his compound, but if he left and the bungalow was taken up by a Civilian, I have no power of preventing him doing as he likes with regard to digging of holes and the like.

### Section II. (f).—Quality of Rations supplied to Troops.

As regards the articles supplied by the markets for the food of the Troops they are generally of good quality, the only difficulty being in the scarcity of the wheat supply, Dharwar being chiefly a rice-growing country, and the cultivation of cotton has led to a still further reduction in the quantity of wheat. The prices though never what may be called cheap, have not since 1867-68 been immoderate.

## Section II. (g).—Other defects.

Perhaps it may not be in my province to mention such a thing, but I cannot help recording my opinion that the C. D. Act would be a benefit to Dharwar.

# Section III.—Measures adopted to improve the Sanitary condition of the Station.

None, that I am aware of.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

I have no suggestion to make, as I am of opinion that the only way to keep a Station under proper conservancy is to make it a regular Military Cantonment.

E. H. S. BOWDICH, Colonel, Commanding at Dharwar.

W. H. YATES, Captain, 7th Regiment N. I.

H. C. REYNOLDS, Lieutenant, R. E., Executive Engineer.

R. H. BATTY, Assistant Surgeon, 7th Regiment N. I.

# Sanitary Report of Ahmedabad Cantonment for 1871.

### Section I.—Health of the Corps forming the Garrison.

The health of the different Corps forming the Garrison during the year has not been favourable, the chief disease from which they have suffered has been fever, caused principally from the enervating climate of Ahmedabad.

The F. Battery 9th Brigade R. A., which arrived here direct from England in November 1869, has had over 100 per cent. of strength admissions into Hospital from fevers, and 5 per cent. from general debility, and the men generally in appearance and stamina have very considerably fallen off during the past year. There have been 5 deaths in this Battery among the men—3 from remittent fever, one from pneumonia coming on after liver disease, and one from disease of the heart; one woman died from remittent fever brought on by climatic causes, and 5 children from causes incidental to childhood.

The A Battery 18th Brigade R. A., which arrived from Kurrachee in the latter part of 1868, has not been so sickly. One man died of disease of the heart, there were two deaths among the children, but none among the women. Percentage of sick to strength of this Battery for last year was 5·10.

The health of the men of the 8th Regiment N. I., which has been located here over 5 years, has been indifferent, there have been upwards of 800 admissions to Hospital from fever and ague during the past year, in this corps there have been 9 deaths.

The other Native Regiment, the 9th, has only lately arrived from Poona.

The health of the general European community inhabiting the Station has been satisfactory, there have been no deaths.

The health of the Native community, chiefly those residing in the Bazar, has been good; there have been 36 deaths, chiefly from fever. There has been no epidemic during the past year in this Station.

### Section II. (a).—Drainage within Cantonment.

There is little or no artificial drainage, and the natural drainage is defective owing to the surface of the Cantonment being so flat; there is a shallow tank south-west of the Cantonment, close to the limits, where water and mud accumulates; this is partly carried off by a nullah connected with the river, but a great deal remains for some months after the monsoon; there is also a hollow eastward of Cantonment where water accumulates after rain, and remains there a considerable time, indeed till it dries up from evaporation.

#### Section II. (b).—Water Supply.

The water supply is ample and of good quality, with the exception of one well situated in front of left flank R. A. Barracks, which is for producing guines-worm to persons in the habit of drinking the water,—it is in consequence not used and might be closed up.

#### Section II. (c).—Accommodation for the Troops.

The accommodation for European and Native Troops is ample. Some of the Barracks, however, inhabited by the Royal Artillery, are badly constructed and hot. The Hospital building is in all respects unsuited as such, it is badly constructed, gloomy, hot, built of mud and entirely devoid of anything like the comfort—which ought to be looked upon as a necessity for all Hospitals—such as a reading room, some resting room for men instead of being confined all day in wards—in short the defects and wants are so numerous that it is needless to commence to specify them.

#### Section II. (d).—Conservancy.

The dry earth system is well and efficiently carried out in the privies of the Royal Artillery Barracks and Hospitals, both European and Native, but the system is not carried out in latrines belonging to the Native Regiments, the refuse in both is carted away to a manure yard a long distance to the eastward of Camp.

No land is manured with the sewage in the Cantonment.

The inhabitants of the Sudder Bazar resort to trenches, which are dug for the purpose, to the north of the Bazar; they are cleaned daily, and the excrement is carried away to the manure yard and deposited there in pits.

#### Section II. (e).—Cleanliness of the Station.

No want of cleanliness in the Station generally, Native Bazars or private compounds.

# Section II. (f).—Quality of Rations supplied to Troops.

Rations supplied to the Troops are good, and ample; the market price of the food of the population is fair, formerly it was high.

#### Section II. (g.)—Other defects.

There are no other defects requiring notice.

# Section III.—Measures adopted to improve the Sanitary condition of the Station.

Measures were adpoted during the year for digging drains to carry off any water lodged in different parts of the Cantonment. There are no measures under consideration for improving the sanitary condition of the Cantonment.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

The well referred to as having the ova of guinea-worm is about to be covered up with a grating which will be kept locked. Water in the vicinity of the Barracks is scarce, and this well will be required for water to the tatties during the hot season.

The water referred to in No. II. (a) is a tank considerably removed from the Barracks, it has already been drained to such an extent that only little water remains, and, to carry off at once all the water would cost many thousands of rupees.

E. L. RUSSELL, Major General,

President Cantonment Committee, Ahmedabad, and Commanding N. D. A.

# Sanitary Report of Rajkote Cantonment for 1871.

#### TROOPS LOCATED AT RAJKOTE.

2nd Regt. Light Cavalry (1 Squadron). No. 2 Company Native Artillery. 18th Regiment N. I.

### Section I.—Health of the Corps forming the Garrison.

The general health of the Troops has been good during the year 1871, although the admission to Hospital have been slightly in excess of previous year, which is due to the greater prevalence of intermittent fever. The average daily sick per mille of strength has been 26·12; seven (7) deaths due to various causes.

There has been no marked difference in the health of the different Corps stationed here, viz:—

Squadron 2nd Regiment L. C.

No. 1 Company N. A. and Goozerat Mountain Train.

Her Majesty's 18th Regiment N. I.

# Section II. (a).—Drainage within Cantonment.

There are no jheels or marshes in the Station or its vicinity. The drainage within the Cantonment is good and in no way prejudical to health.

### Section II. (b).—Water Supply.

The water supply is obtained from wells, there being (11) eleven Government and (9) nine private wells in the Camp. Four of the Government wells contain excellent water and last during the whole year, but the others run dry during the hot weather. There is a river in the vicinity which can be made use of in a case of necessity.

### Section II. (c).—Accommodation for the Troops.

Native Infantry new Lines in coarse of construction, four and a half Companies are already accommodated in them.

The Cavalry live in permanent Barracks, formerly Saddle-rooms and Syce Guard-rooms: the families have had to be left behind at Deesa in consequence of there being no accommodation for them at Rajkote; it is, however, now proposed to erect lines for the familymen on the site of the old Cavalry lines.

The Artillery live in the sick horse stables and old post gun lines; the latter are very bad and were condemned three years ago: the men altogether are a good deal crowded when the Company is up to its full strength. New lines are absolutely necessary.

The Drivers of the Goozerat Mountain Train have good lines; four new houses are in course of construction: these men will then have ample accommodation.

The Hospitals answer all purposes, there is no overcrowding; they are well situated and airy.

# Section II. (d).—Conservancy.

There are good permanent latrines for all the different Corps and followers. The dry sweepings and dry liquid sewage is deposited in the manure yard (situated within Civil limits) in pits dug for the purpose, the deposits being covered with earth.

The Cavalry and Artillery have no conservancy cart of their own, and the cart with the Native Infantry Regiment has therefore to be utilized in removing the receptacles from the latrines of these Corps, there being a large number of followers with both, the establishments allowed could not possibly remove the latrine refuse to the manure yard, which is a long distance off. This throws a heavy amount of work on the Infantry cart, almost more than it is able to perform. The Station conservancy cart removes the dry sweepings from the Cavalry and Artillery Lines.

# Section II. (e).—Cleanliness of the Station.

The Station generally is clean, the Conservancy of the Regimental Bazaars, private compounds, and Lines being good.

# Section II. (f).—Quality of Rations supplied to the Troops.

No European Troops at this Station. The supplies for the Natives Troops are generally good. The mutton and beef supplied for the European Officers are of an inferior quality, and the bread only 2nd class. The Suddur Bazar is under the control of the Civil authorities, being within Civil limits.

#### Section II. (g).—Other defects.

None.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

What has long been required at this Station, viz. the planting and watering of trees was sanctioned last year, and trees were planted along the whole of the west side of the Cantonment.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.—g.) already given in Section II.

None.

- J. J. COMBE, Colonel, and President, Commanding at Rajcote.
- J. F. F. GRIFFITH, Captain, and Member, Staff Officer, Rajcote.
- A. H. HUGHES, M.D., Assistant Surgeon, and Member, in charge Staff and Details.

# Sanitary Report of the Surat Cantonment for 1871.

1. The average strength of H. M.'s 13th Regiment N. I. for the past year has been 632.

## Section I.—Health of the Corps forming the Garrison.

2. The total number of admissions from all causes has been 861, showing an increase of 54 on the previous year.

Fever of the intermittent and continued form has been the prevailing disease.

- 3. The daily average of sick has been 24.1.
- 4. The admissions from bowel complaints have been 61, showing an increase only of 2 on the previous year.
- 5. Nine deaths occurred during this year, viz., ague 1, diarhœa 1, scurvy 2, catarrh 1, debility 2, remittent fever 2.
  - 6. No case of small-pox has occurred.
  - 7. Vaccination has been regularly and successfully performed.
  - 8. No case of cholera has occurred.
- 9. The health of the general European and Native community in Camp has on the whole been satisfactory.

#### Section II. (a).—Drainage within Cantonment.

The drainage within the Cantonment is good, with the exception of the Lines, which are situated on low ground, and after a heavy fall of rain the water lies in considerable quantities for some time. There are no jheels or marshes in the Station or its vicinity.

### Section II. (b).—Water Supply.

The water supply is sufficient in quantity but inferior in quality, being brackish. Good water is obtainable just outside Camp.

## Section II. (c).—Accommodation for the Troops.

Regimental Lines.—The accommodation is sufficient; there is no over-crowding.

There is accommodation in the Hospital for 35 patients.

## Section II. (d).—Conservancy.

The latrines, three in number—two for the men and one for women—are in good order. Conservancy is carried out by the tank-cart system.

The sewage is carried some distance from Camp and buried in holes, with dry earth thrown on the top.

No part of the Cantonment land is manured with the Station sewage.

#### Section II. (e).—Cleanliness of the Station.

The general sanitary condition of the Camp is good, no refuse of any kind being allowed to accumulate.

## Section II. (f)—Quality of Rations supplied to Troops.

No rations are supplied; there has been no unusual deviation in the market price of the food.

10 F

# Section II. (g).—Other defects.

None.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

A new road direct from the latrines to the manure yard has been constructed, which facilitates the removal of the ordure.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a - g) already given in Section II.

As the ground on which the Lines stand is considerably above the level of the River Taptee (which is little more than 100 yards away) except at the time of very extraordinary floods, there is no difficulty in providing for the escape of accumulated rain water by a small outlay on the present open drains, from which the water can be carried into the River by the covered drain and the open cut to the west of it.

H. A. ADAMS, Colonel, and President Surat Board of Health.

W. D. T. TICEHURST, Surgeon, and Member.

WILLIAM CLERKE, Executive Engineer, and Member.

W. LANG, Staff Officer, and Member.

# Sanitary Report of the Deesa Cantonment for 1871.

# Section I.—Health of the Corps forming the Garrison.

The Troops cantoned in this Station during the past year were-

1. Battery 9th Brigade Royal Artillery.

3. H. M.'s 2nd Regiment Bombay Light Cavalry.

2. H. M.'s 108th Regiment.

4. H. M.'s 24th do. do. Native Infantry.

The health of the above Corps has been generally good.

The extent of sickness and mortality occasioned by the chief diseases are as follows. Artillery.

Febricula,	33 a	dmissi	ons.
Ague,	42	do.	
Dysentery,	11	do.	Two deaths.
Hepititis,	20	do.	One death.
Sunstroke,	2	do.	One death.

#### H. M's 108th Regiment.

Fever including ague, 546 admissions.

Venereal Disease, 158 do.

Liver, 60 do. Two deaths.

Sunstroke, 15 do. Three deaths.

Pulmonary diseases rather frequent, and there were 3 deaths from pulmonary phthisis.

H. M.'s 2nd Regiment Light Cavalry.—Fevers, chiefly of quotidian ague, 80. Fevers, affections of the eye, and contusions held the chief rank in the list of admissions, but the greatest was from malarial disease, which caused 29 per cent. of all the admissions into Hospital. One death occurred from remittent fever.

H. M.'s 24th Regiment Native Infantry.—In this Regiment there has been no sickness calling for remark. Fevers, catarrhal conjunctivitis and affections of the respiratory organs were the chief diseases, and there were 3 deaths from bronchitis, 3 from ague, 1 from chronic rheumatism, and 1 from phthisis.

The health of the families of the Regiments in Garrison has been good during the past year. In H. M.'s 108th Regiment there were many cases of mild ophthalmia, 43 being recorded amongst the children. In the 2nd Regiment Light Cavalry a small outbreak of mild small-pox took place in March and April amongst the children, 10 of whom underwent treatment, and all were cured.

In the E Battery 9th Brigade Royal Artillery the cases of ague occurred in men who had previous attacks at Deolalee and on the line of march, very few could be traced to the climate of Deesa. The majority of the cases of dysentery and hepatitis were caused by exposure to wet on the line of march, rain having fallen. The two cases of sunstroke occurred to men who were in the habit of drinking.

In H. M.'s 108th Regiment the fever and ague were contracted mostly from a residence at Mount Aboo, where the men being under canvas were subjected to severe wetting from heavy rain. Intemperance influenced the amount of sickness in the Regiment to a very great extent directly and indirectly. Not a few of the men who suffered from sunstroke were predisposed to it by previous indulgence in intoxicating liquor. The pulmonary disease was not attributable to any local cause.

Venereal was rarely contracted from registered women or from residents in the Bazars.

Many of the cases of liver were re-admissions.

In H. M.'s 2nd Regiment Light Cavalry, consequent on the rains, there was a considerable increase in the admissions from malarial disease, but this obtained throughout the country owing to miasma resulting from decomposing vegetable matter.

In H. M.'s 24th Regiment N. I. the decayed state of the huts in which the men live, and the adjacent nullahs after the monsoon is over, caused much malarial fever.

The health of the general European and Native community inhabiting the Station was good. There were no epidemics of any sort during the year. The chief cause of mortality has been from fever. There were 55 deaths during the year from this cause. The greatest mortality from this cause was in June, when 9 deaths occurred.

### Section II. (a).—Drainage within Cantonment.

The drainage of the Camp is generally good, and the slopes of the ground in the vicinity of the Barracks sufficient to carry off the surface water rapidly. There are no jheels or marshes in the Station or its vicinity. After heavy rain pools of water are formed in the sandy hollows, but soon dry up.

### Section II. (b).—Water Supply.

The water supply throughout the Cantonment is both abundant in quantity and of excellent quality. It is obtained almost altogether from wells and the River Bunnass flows behind the Sudder Bazar. There are no tanks in this Cantonment. The depth, from the surface of the ground in the wells vary from 50 to 70 feet. The level of the water varies

very little at the different seasons of the year. From the porous nature of the soil some of the low-lying wells are liable to be contaminated, but surface scavenging is carried out as fully as practicable, so that products of decomposition have little opportunity of admission into any of them. This is practically demonstrated by the very small ratio of deaths from bowel complaints. In the Cavalry lines, the area drained by the wells therein must be considerably saturated with horse urine and manure, yet it is surprising how free from organic matter the water is. These remarks apply equally to the wells near the stables of the Battery of Artillery. The other sources of contamination to the water in the wells arises in the hot season from organic matter, in the form of vegetable debris being deposited in them by the wind. In those wells where motes are used, particles of bullock ordure and urine are continually being carried into the water by the lower rope, which trails on the bullock ramp.

#### Section II. (c).—Accommodation for the Troops.

The whole of the Barracks for the single men of the Battery of Artillery and of the European Regiment have been condemned, and the construction of new ones ordered. With the exception of the guard houses, and some blocks of family quarters, none of the buildings are in accordance with the standard plans, and the accommodation is decidedly inferior to what it ought to be. New Barracks have been estimated for, and forwarded for the sanction of Government. There is almost no accommodation in Camp for Staff Serjeants, Serjeants attached to Public Works Department, Band Masters, &c.

Hospital accommodation is ample and good, but the female ward of the Artillery is small, and was over-crowded on one occasion during the year.

The family-men of the Cavalry find it necessary to have enclosures, with grass screens, in front of their huts. This grass is liable to decompose and to give rise to malaria, after the rains. Walls are therefore to be substituted. At the Cavalry Hospital there are no quarters for First Class Hospital Servants. The Native Infantry Lines are old, and show everywhere signs of decay, and have tendency to cause much malarial fever after the rains are over. The Hospital has, on several occasions, been over-crowded. There are no wards for contagious diseases, no Dead-house, and no houses for First Class Hospital Servants.

The accommodation in the Patcherries of the 108th Regiment is insufficient owing to the large number of married men. There are 112 women and 229 children with the Regiment.

#### Section II. (d).—Conservancy.

The latrines of the Cavalry are in a bad position, to windward of the Lines. A well from which some of the syces get their drinking water, is only 50 yards distant. There are no permanent latrines for the Native Infantry, who consequently only have thorn enclosures in the bed of the river to resort to. These are exposed, and usually washed away annually, when the men and women have to resort to the neighbouring nullahs, beyond Camp limits, till fresh enclosures are put up.

No part of the Cantonment land is manured with Station sewage.

Latrine accommodation for 108th Regiment is deficient especially for the Quarter Guard, and the buildings are not of the standard plan.

A permanent latrine for the European Regimental Bazar is much needed. At present the inhabitants have to resort to a thorn enclosure in the vicinity.

### Section II, (e).—Cleanliness of the Station.

There are no arrangements for removing daily the drainage of kitchens in private compounds. In other respects there is no want of cleanliness of the Station generally of Native Bazars or private compounds.

### Section II. (f).—Quality of Rations supplied to Troops.

The rations supplied to the Troops have been excellent, and there has been no unusual deviation in the market price of the food of the population generally.

# Section II. (g).— Other defects.

Some four years ago sanction was given by Government for the construction of Cantonment roads. These have been made connecting the Artillery and 108th Regimental Lines and Bazars, but there is a great want of communication in the Staff, Native Infantry and Cavalry Lines, especially in the latter, where the sand is very deep and heavy.

Estimates have been made by the Executive Engineer for the extension of the Camp roads, and the matter has been urgently brought forward by the Station Committees annually for the last three years.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

The sanitary condition of this Station is so satisfactory that but few measures are called for to improve it. During the past year nothing was done towards that object. At present the Committee of the Cantonment are considering the best means of removing daily from the compound of private houses the drainage from the kitchens, and it is proposed to procure an air-tight iron receptacle mounted on a light cart frame for that purpose. It has also been determined to erect seven additional fixed rubbish receptacles in different parts of the Bazars in which the inhabitants of the neighbourhood might deposit the sweepings from their houses previous to its removal to the manure yard by the scavenger carts. It had been determined to grant licenses to two residents in the Cantonments to erect a commodious market house, at a cost of about Rs. 4,000 and a slaughter house for about Rs. 600. They had consented to do so, provided they were allowed to exact fees from persons using these places which would give them a fair return for their outlay. Plans and estimates had been submitted to and approved of by the Government, but it having become known that it was in contemplation to remove the European Troops from this to Mount Aboo, the Committee have felt reluctant to call upon the two men above alluded to, to carry out works which might occasion them loss by the great decrease in consumption of provisions which might be anticipated by the large reduction of the Troops cantoned here.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

- (a). Surface drains might be excavated at the commencement of the monsoon from those points where rain water may accumulate to the nearest natural watercourses which are to be found in most parts of Camp.
- (b). With regard to the wells near the Cavalry Horse Lines and the Artillery Stables, the Committee can offer no suggestion for preventing the areas drained by them being saturated with horse urine and manure, but as the water in these wells are surprisingly free from organic matter, it follows that they cannot be much affected from the causes mentioned. The wells in this Cantonment are generally of small diameter and the tops might be covered with wooden frames which would to a great extent prevent organic matter being deposited in them by the wind. Where môtes are used this could not be done, nor can the Committee suggest any remedy for preventing the contamination of the water from particles adhering to the lower rope.
- (c). New Barracks have been estimated for and forwarded for the sanction of Government.

Accommodation for the females in the Artillery Hospital might be increased by the Assistant Apothecary's quarters adjoining the Female ward being converted into an extra ward, and separate quarters built for him.

Digitized by Google

Additional Patcherries should be erected for the families of the men of the European Infantry, and those now existing which are not in accordance with the standard plan should be replaced as soon as possible by others that are.

Walls should be substituted for grass screens in front of the family men's huts in the Cavalry lines.

Quarters for First Class Servants in the Hospital compounds of both the Cavalry and Native Infantry should be erected. The Hospital of the Native Infantry should be enlarged and wards for contagious diseases and a dead house added thereto.

The Lines of the Native Infantry should be rebuilt, as they are now old and show everywhere signs of decay.

Quarters for Staff Serjeants, Serjeants attached to the Public Works Department, and Band Masters, should be constructed.

(d). Although the Cavalry latrines are badly situated there is no other situation adjoining the Lines to which the objection would not apply that it was to windward of some occupied portion of Camp, and the well in the vicinity does not appear to have been contaminated by it.

Permanent latrines are much required for the Native Infantry Regiment, but the state of the Cantonment Fund will not permit so large an expenditure as would be required for the purpose of executing this work. Additional latrine accommodation, for the European Infantry, especially for the Quarter Guard, should be erected.

A permanent latrine for the European Infantry Regimental Bazar should be constructed.

- (e). Either halalcore bheesties or a properly constructed iron receptacle on a cart frame should be employed to remove daily from private compounds the kitchen drainage.
- (g). An extension of the Cantonment roads through the Cavalry, Native Infantry and Staff Lines should be carried out, and a culvert across a watercourse near the Artillery Lines, which is much needed, should be at once constructed.

E. P. LYNCH, Brigadier General, Commanding Deesa F. B., and President Cantonment Committee, Deesa.

# Sanitary Report of the Baroda Cantonment for 1871.

#### Section I.—Health of the Corps forming the Garrison.

The average strength of the Detachment R. A. was 26; the men as a rule appeared to enjoy good health. Fever intermittent furnished the greatest number of cases treated, the following is a list of diseases which appeared from time to time: ague, apoplexy, colic, delirium tremens, diarrhœa, dyspepsia, ear-ache, gonorrhœa, lumbago, orchitis, palpitation of the heart, rheumatism, sunstroke, tape-worm. On the list of casualties one death from apoplexy occurred on the 28th May. In June a Gunner, with symptoms of sunstroke, was sent to Ahmedabad for treatment, as there is no Hospital for the reception of sick European soldiers at Baroda. In June also, the largest sick list occurred. The Detachment 24 strong had to a man and one over been under treatment. At all events 25 men had been seen as out-patients.

H. M.'s 4th Rifles were stationed at Baroda during the year. The average strength, exclusive of 9 European Officers, was 650. The admissions registered during the year were 515, which added to the remainder of 24, make a total of 539 under treatment, with a daily sick average of 15, which is 3 in excess of last year's Return, the percentage of treated to strength was 82.7, of deaths to strength and treated 0.4 and 0.5 respectively. The health of the Battalion has improved since last year. It is indeed satisfactory to furnish such a favourable report, for the climate of Baroda is a trying one, and exerts a deleterious influence, sooner or later, on Native as well as European Troops. That the Corps did not suffer sickness to a greater extent is a circumstance of considerable interest, for the sepoys lived, and still continue to live, in most miserable quarters. The Regimental Lines for years have been notoriously bad. Moreover the residence in Camp of the widow of the late Gaekwar Khunderow, from May to 31st December 1871, entailed extra guard duties on the men, who at this time had only two and a half nights in bed (weekly).

Ague prevailed more than any other disease. In many cases it was complicated with bronchitis, the latter affection disappearing on the advent of warmer weather. Much sickness, chiefly ague, and considerable mortality prevailed amongst the women and children in the Lines. Of the former 7 and of the latter 21 died. The health of the general European and Native community may be pronounced good: only one death occurred during the year amongst the Europeans, the deceased was an infant of 7 months and died of atrophy.

In the Sudder Bazar, with an average population of 2,270, there were 65 deaths and 22 births.

### Section II. (a).—Drainage within Cantonment.

As regards the Cantonment generally, due attention appears to have been paid to drainage. There are large trenches cut in various directions to carry off the superfluous waters of the monsoon. The river Vishwamitree in the immediate neighbourhood of the Hospital and Artillery Barracks, occasionally overflows its banks, and has been known to submerge a large portion of Camp, Hospital Compound, and the Sudder Bazar. The Vishwamitree is a sluggish stream about 25 yards wide, but twice as broad in the rainy season. It describes an irregular and winding course where it bounds the eastern portion of Camp. To the west there is a tank of considerable size, which is frequented by the dhobees in and shortly after the rains, but washing clothes there is not permitted when the water begins to decrease. There are no jheels or marshes in the Station or immediate neighbourhood.

## Section II. (b).—Water Supply.

The water supply, obtained from numerous wells in Camp, is ample and considered good; "samples drawn from these wells" were found by Dr. Leith, the late Sanitary Commissioner, "to contain nitrates, indicating long continued infiltration of impurities, and also a considerable quantity of recent organic matter, because earth is well known to have only a limited "power as a purifying filter, and to allow of organic matters being carried down from the "surface of the ground by the rain that feeds the well." The water of the river and tank already alluded to is in use chiefly for purposes of ablution and is much resorted to by native washermen.

#### Section II. (c).—Accommodation for the Troops.

The Barrack set apart for the Detachment of R. A. is in fair order: and amply sufficient for the accommodation of the few men who do duty here, but there is no Hospital as already stated for the reception and treatment of sick Europeans at Baroda. "Baroda," writes Dr. Leith, "has always been a station at which there has been much sickness among Euro-"pean Troops, and the mortality in some years has been exceedingly great from various causes. "It is highly desirable," he adds, "that those whom it is necessary to locate at Baroda should

"have all the advantages as to Barracks and Hospital accommodation that the lately devised "improvements can afford." The foregoing remarks are quoted from the Sanitary Commissioner's Report of 1866, and are as cogent now as they were five years ago. Once and again, the advantage of establishing a permanent Hospital at this Station for the reception and treatment of the sick has been indicated. Measures will shortly be taken to equip one; as the subject of new Barracks or Hospital for the Royal Artillery at Baroda is now under the consideration of His Excellency the Commander-in-Chief. The Regimental Lines of the 4th Rifles, which are old and condemned, should be superseded by new ones. The Hospital and out-houses are in fair order, but there are no quarters for Medical Pupils.

#### Section II. (d).—Conservancy.

The latrine and urinary provided for the R. A. are at too great a distance from the Barrack, and objectionable on that account, more especially in the monsoon, as the men are exposed to wet both going and coming. This could easily be rectified by constructing a covered way. The dry earth system has been introduced, but is not in very good working order, as the men are heedless in the matter, and for the most part leave the mechanical details to the sweeper. But improvement may be looked for when the new Barracks, Hospital latrines, out-houses, &c. are erected.

The new latrines recently finished for the use of H. M.'s 4th Rifles and their families are excellent of their kind, the introduction of the dry earth system in these latrines is still in abeyance, although it is in force and works well in the Hospital Retreat. No part of the Cantonment is manured with Station sewage.

The general conservancy of the Camp is good. Latrines have lately been built for the Native population of the Bazar, which are admirable of their kind, indeed could not be better. Pans are used, and the dry earth system has been introduced with good effect. Formerly the inhabitants resorted to an enclosure for purposes of nature, this could not be kept satisfactorily clean, and was always offensive. A trench is ready dug, into which the excrement is immediately thrown and covered with earth.

## Section II. (a).—Cleanliness of the Station.

There is no apparent want of cleanliness in the Station generally. The Native Bazar is kept in admirable order, and presents a clean and tidy appearance. Receptacles have been made for each bungalow to collect refuse and rubbish of every description, these are emptied twice a day and removed by the conservancy carts. Receptacles have also been provided for the Bazar and placed in convenient places, these also are cleaned morning and evening.

#### Section II. (f).—Quality of Rations supplied to the Troops.

The Rations supplied to the Troops at Baroda have been uniformly very good and seldom or never the subject of complaint. The rates are considered moderate, beef excepted, which is reported to be rather high, but there has been no unusual deviation in the market price of the food of the native population generally.

### Section II. (g).—Other defects.

In addition to the foregoing any other defects requiring notice do not occur.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

Native Regimental as well as Bazar latrines have been erected and receptacles instituted, with the view of improving the sanitary condition of the Cantonment. It is under consideration to provide urinaries for the Sudder Bazar, the sewage hitherto has been disposed of either in sinks or reservoirs which are emptied daily by the sweepers.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

In building new Barracks for European and Lines for Native Soldiers, the suggestion that each Barrack and Line should stand on a plinth not less than 3 feet high with a spacious verandah all round is one likely to improve the health of the Troops. Upper-storied Barracks are calculated to be very hot, but built as suggested are perhaps best adapted for the changes of an Indian climate. The rooms themselves should be lofty, with walls of substantial thickness, and covered ways connecting the latrines with the Barracks should certainly be constructed.

C. G. H. ROSS, Surgeon, and Sanitary Officer.H. A. WOOD, Colonel, Commanding Baroda.

# Sanitary Report of the Bhooj Cantonment for 1871.

## Section I.—Health of the Corps forming the Garrison.

The Garrison was temporarily increased at the end of the year by the arrival on the 25th December of two squadrons of H. M.'s 2nd Regiment Light Cavalry, numbering 282 sabres, with 2 European Officers; they arrived in good health and continued so up to the end of the year.

With regard to the 20th Regiment N. I., although the sick list was rather high at the beginning of the year, and although the mortality has been greater than for the last two years, the general health of the regiment throughout the year cannot be pronounced otherwise than "good." The total admissions into Hospital during the year have been 528, of which 174 were ague, as compared with 971 total admissions for the year 1870 (at Deesa), of which 479 were ague: the regiment may therefore be said to have improved in health during the year it has been in garrison at Bhooj. The cases of ague have as a rule proved easily amenable to treatment, the only exceptions being a few cases in the early months of the year in which recovery was very tedious and lingering. But few of the ague cases can with any fairness be attributed to the climate of Bhooj itself, as most of the patients treated had repeatedly suffered from previous attacks in other Stations, and were therefore liable to a relapse from comparatively slight exciting causes. As usual in a Native regiment some of the long service men suffered from rheumatic pains in the colder months, but not in any marked degree.

Scurvy furnished a few admissions, and some other men under treatment in hospital for other affections showed symptoms of the disease; these were chiefly among men with large families, whose diet was probably deficient in both quantity and quality. No cases of cholera occurred and only one of small-pox; the patient was the child of a private follower and made a good recovery.

The health of the small Native community in the Sudder Bazar has been good throughout the year. Nine deaths occurred in the regiment, as follows:—

Two, from scurvy and secondary syphilis combined. One, from hemiplegia.

12 F

One, from remittent fever.

One, from pneumonia.

One, from acute atrophy of the liver.

One, from chronic bronchitis and asthma.

One, sudden failure of the heart's action in a patient already under treatment for ague.

One, suicide in the Lines (a man who shot himself through the chest).

The following table shows the principal diseases and the admissions into Hospital in the 20th Regiment N. I. during the year:—

Average Strength.		si.		Remittent Pever.	ent.	Syp					umonia.					en.				ı

### Section II. (a).—Drainage within Cantonment.

The Camp being situated on the slope of the hill does not require any complicated system of drainage, and the few nullahs, with culverts, &c. which exist, suffice to carry off the surface water and to prevent its lodgment. There are no local sources of malaria such as marshes, &c. in the Camp or in its immediate vicinity, the nearest being the great Runn, 14 miles to the North, and the wind only blows from that quarter during about two months in the year.

### Section II. (b).—Water Supply.

The water supply which is entirely from wells has been plentiful throughout the year: there are three wells in the Regimental Lines, but the water obtained from them is brackish and only used for washing purposes. The drinking water is brought from other wells at a short distance from the Lines, the circuits of these wells are paved and their position, &c. is such as to warrant the conclusion that the water obtained from them is not exposed to any contamination: the water itself is clear and refreshing to the palate, but it is "hard"; it has not been analysed, but is believed to contain earthy salts in excess, with a minimum of organic matter. The wells in Camp have all been drawn dry, and cleaned out during the year.

#### Section II. (c).—Accommodation for the Troops.

The Lines are clean and are kept in a good sanitary condition, but the buildings themselves are decidedly bad, the superficial area of some rooms being considerably less than the allowance sanctioned by the Government of India, namely, 70 superficial feet to each single man, and 120 superficial feet to each family. On measuring 12 rooms occupied by single men it was found that the average superficial area of each was about 48 square feet; the average area of the rooms occupied by families approaches nearer to the Government allowance, but in many instances is also very deficient, the rooms are about 10 feet high in the centre. Another very objectionable arrangement is that a room on one side of a block is only separated from that on the other by a mud wall, 6 or 7 feet high, so that the privacy enjoyed by each nan is merely nominal. The streets between the blocks of huts are wide and well-exposed to the influence of the wind and rays of the sun. The Hospital consists of one large ward calculated to hold about 24 patients, with a wide verandah on each side and one small room for any special case; this alone would be inadequate to the requirements of the regiment; but next to it stands the old Artillery Hospital, which is made available for the reception of the sick when additional accommodation is required. The Quarter Guard is a large roomy building well suited to the purposes for which it is required. The cells which are near the Quarter Guard are two in number, each being 10 feet square and 15 feet in height.

#### Section II. (d).—Conservancy.

The latrine accommodation for the regiment is good and ample: the latrines are kept clean, and although they are (unavoidably) to windward of most of the Officers' bungalows, no unpleasant effluvia has at any time been observed to come from their direction: they are provided with iron pans which are emptied into large receptacles immediately after being used, and these latter are carried away to the manure yard which is to leeward of Camp, surrounded by a masonry wall, and their contents are buried in pits and covered over with earth. The Officers' compounds are furnished with small latrines for the use of the servants, and the conservancy is regularly maintained in them in the same manner as for the Lines.

The Sudder Bazar is unprovided with any latrine, the inhabitants are fortunately few in number, many of the shopkeepers only staying there during the day and returning to their homes in the city at night.

### Section II. (e).—Cleanliness of the Station.

The Station generally, and the private compounds, are kept clean and in a good sanitary condition; the Sudder Bazar is also very clean, and being very small is easily kept so.

Section II. (f).—Quality of Rations supplied to Troops.

None.

Section II. (g).—Other defects.

None.

# Section III.—Measures adopted to improve the Sanitary condition of the Station.

One change effected in the Lines is from a sanitary point of view worthy of notice. Soon after the arrival of the regiment at Bhooj, in the early part of the year, it was observed that many of the huts in the Lines were provided with a small pit outside and in front of the house, these were about a foot in diameter and varied from a foot to a foot and a half in depth, being covered with a stone flag; they were used as a kind of depôt for refuse of all kinds brought out from the interior of the houses, and there was also reason to believe that they were used by the junior members of the family for the purposes of nature. These were nominally cleaned out every two or three days, but it will readily be believed that their

ordinary condition was any thing but desirable from a hygienic point of view: moreover although they had not up to that time been offensive, it was considered that they could hardly fail to become so during the hot weather and might thus prove a fruitful source of disease, and on a representation to this effect being made by the Medical Officer of the regiment, orders were issued that the pits in question should be filled up and the occupiers of the adjoining houses were directed to place all refuse matter in a conspicuous place in front of the house, where it could be seen and daily removed by the sweepers.

After the rainy season the usual precautions were adopted in clearing the Camp of all rank vegetation, &c.

# Section IV—Suggestions for remedying any of the defects still existing under the several heads (a.—g.) already given in Section II.

Though the Regimental Lines are not built according to the standard plan, the men are perfectly comfortable in them, and as the only way they could be improved would be to rebuild them, a measure which would be attended with very considerable expense, from the difficulty in procuring wood, so they might be allowed to remain as they are.

W. SCOTT, Colonel, Commanding in Kutch,
President, Station Board of Health.

J. G. GILLMORE, Captain, Station Staff Officer.
H. DETATHAM, Assist. Surgeon, Staff Surgeon,
Station Board of Health.

## Sanitary Report of the Mhow Cantonment for 1871.

## Section I.—Health of the Corps forming the Garrison.

European Troops.—The health of the Corps forming the Garrison of Mhow during the past year has been on the whole satisfactory.

The most prevalent class of disease was malarious fever both of the remittent and intermittent type, but chiefly the latter; there can be no doubt that many of the men admitted this year contracted the aguish Labit during the previous season when that disease was rife among all the European Troops, the result of an unusually heavy fall of rain during the monsoon. Bowel complaints have not been very numerous, and generally manageable, although two deaths happened in the 59th Regiment, the one from dysentery, the other from diarrhœa, while hepatic abcess proved fatal to two soldiers of the 15th Hussars.

The following return shows the extent of sickness and mortality among the European Troops:—

	Average strength.	Admitted.	Died,	Ratio of admissions per 1,000 of mean strength.	Ratio of deaths per 1000 of mean strength.
D/E R. H. A.  1/6 R. A	76 464 704	297 94 904 1,342	1 1 3 7	1856·25 1236·84 1948·27 1890·62 58·89	6·25 13·15 6·46 9·94

Native Troops and European and Native Community.—Two Native Regiments have been stationed at Mhow during the year 1871, viz., the 3rd N. I. and the 14th N. I. The latter Corps left for Kolapoor before this report was called for, so that no particulars can be given regarding it. The Medical Officer of the 3rd Regiment N. I. reports that the health of his Corps has been less satisfactory than during the previous year of 1870, there being an increase of 178 in the number of admissions to Hospital, due in his opinion to malarious fever and dysentery:—

His daily average of sick has been	20
Percentage of sick	137·1
Number of admissions during the year	716
Number of deaths	

In addition to the two Native Regiments there are several Staff Officers with their Offices and Departmental Establishments located in this Camp, and for whose medical aid a separate Hospital is provided called the "Staff Hospital." The total strength of the Officers and followers entitled to receive medicines from this Hospital is 1,728. Their health has on the whole been good, the admissions among the males being 92 less than in 1870, there has however been a good deal of sickness among the women and children both Europeans and Natives. The total number of treated has been 1,364. The prevailing diseases have been fever and chest and bowel complaints. There has been no epidemic disease during 1871. The sickness has merely been such as might be reasonably expected in any station in a tropical climate.

Venereal diseases have prevailed largely at Mhow among the British Troops, and although the working of the Lock Hospital has been closely attended to, the results which ought to have followed have not been experienced.

In the month of April Officers Commanding European Corps were requested to select one or two men of good character to act as Regimental Police and to be constantly in the Sudder Bazar and about the outskirts to note the residences of prostitutes whom the men were in the habit of visiting.

It was thought that this measure would materially improve the working of the Lock Hospital and that the Regimental Police would assist the Cantonment Magistrate and the Medical Officer in charge, in detecting unregistered prostitutes and others from whom the men contract disease, but the favourable results anticipated have not been obtained. The number of registered prostitutes continues to average about 70, whereas it is notorious that four or five times that number at least practise their trade within the Cantonment of Mhow. There has been no diminution in the amount of venereal disease, and the Lock Hospital established at Mhow has proved a failure principally, if not entirely, on account of the difficulty of establishing sufficient proof of prostitution to warrant the enforcement of registration. Until more power is placed in the hands of the Police, and suspected women are compelled to bear the onus of disproof, registration cannot be carried out as it should be.

#### Section II. (a).—Drainage within Cantonment.

The general sanitary condition of that portion of the Cantonment which is occupied by European Troops is satisfactory, and the natural drainage is good. During the rains water collects beyond the Infantry Barracks, but from the distance is not likely to prove injurious to health unless the wind blew from the south, which rarely happens here,

It has been recommended to fill up a piece of hollow ground into which building material rubbish has been shot, between the Cavalry Quarter Guard and No. 3 new Barrack; this ground is very spongy during and for some time after the rains.

The Native Infantry Lines are all surface drained with sufficient slope to prevent accumulation of stagnant water in any situation. The plain to the North and to the East of the 13 F

Lines is of black soil and contains holes and inequalities where the water lodges during the rains, which the Medical Officer of the 3rd Regiment N. I. considers a source of malaria causing the fever from which the Regiment suffered in 1871. Under recent orders received from Army Head Quarters, it is proposed to cultivate about one-third of this ground.

The artificial drainage of the Sudder Bazar needs thorough reform. The side drains along the main street and many other streets are covered in by masonry platforms built in front of the slopes. It is impossible to prevent sweepings and all kinds of filth accumulating beneath these platforms. The drains thus become choked and are rendered utterly useless for the purpose for which they were constructed. In many of the back streets there is no attempt whatever at artificial drainage, and the natural drainage being very defective, the consequence is that for several days after a heavy fall of rain these streets remain in most filthy and obnoxious state, being in some places nearly knee deep in liquid mud. and filth of all kinds.

The Medical Officers unanimously point to the Sudder Bazar as the field for sanitary improvement in this Cantonment, more especially with regard to its drainage; at one place, in the middle of the Bazar, there is a large hollow which in the rains becomes a duck pond-

There are no jheels or marshes in the Station or its vinicity.

## Section II. (b).—Water Supply.

The water supply for the European and Native Troops is obtained from wells defended by parapets and some of which are paved around, the supply is apt to become scanty during the dry weather; this however is now less likely to happen from the use of tatties having been discontinued in Barracks. The water is good and wholesome.

There are 94 wells in the Sudder Bazar, 40 of which are told off for drinking purposes only. Most of them are provided with masonry walls and some with platforms also. Most of these platforms have tanks, but in many cases the waste water accumulates round the platform or well, and in time doubtless percolates back into the wells. The entire absence of any system of drainage for the Sudder Bazar is another source of contamination to the wells, also the nullah which runs in a direction generally paralled to the east face of the Bazar, into which some of the drainage must find its way in the dry and cold seasons. It fills in the rains, carries some of such deposit into the Sarteir river and probably leaves some at different parts of its own banks to find its way by percolation into any wells in the neighbourhood.

## Section II. (c).—Accommodation for the Troops.

European Troops.—The Infantry Regiment, even with a Company at Indore, was somewhat over-crowded owing to the arrival of a strong draft; and at the recommendation of the Deputy Inspector General of Hospitals a detachment of the 59th Regiment was sent to Neemuch last March, a new double storied Barrack has lately been completed and occupied, and with a Company at Indore the Infantry will be fairly housed. The men who occupied the old condemned Patcherries last year enjoyed, strange to say, somewhat better health than those in Barracks.

The Horse Artillery have occupied the bombproof Barracks well defended by chappers. The Garrison Battery occupied two one-storied thatched Barracks.

The allowance of cubic space has been sufficient, upwards of 2,000 feet per man, and there has been no undue sickness among the men.

A new double-storied Barrack on the standard plan was taken into occupation by the 15th Hussars on the 1st of March, and a second in December. The Barrack accommodation of this Regiment may therefore be pronounced good, and it will be still further improved when a third new Barrack expected to be completed before the rains, is occupied.

The married quarters and out-buildings of all the Corps are generally good.

The Hospital accommodation is also good and sufficient except in years of unusual sickness; a new Hospital for the European Infantry is in contemplation; when this is built, a few years hence, the present Hospital now used by Artillery and Infantry will be handed over to the Artillery only.

Native Troops and Followers.—The houses in the lines of Native Infantry Regiments are comfortable and well ventilated, but they are badly built, and more than one serious accident has occurred owing to some of them suddenly collapsing during the rains.

The Hospital accommodation consists of one building with two badly ventilated bombproof wards capable of accommodating 14 beds, each one being allotted to each Regiment. This has been reported unsuitable and insufficient and has been brought under the consideration of the Government of India. *Vide* Government Resolution M. D. No. 5306, dated Bombay Castle, 19th December 1871.

The accommodation in the Staff Hospital is limited to 16 beds for Native male patients and is inadequate for the strength entitled to receive aid.

There is no accommodation for Europeans or for Women.

#### Section II. (d).—Conservancy.

European Troops.—All the latrines and urinals are on the standard plan and the dry earth system of conservancy is in use and answers well. The receptacles are carted away and the contents deposited in trenches at a distance from and to leeward of dwelling houses, a layer of earth is spread in the trenches daily, which during the dry months keeps the manure yards free from sewage odour.

Native Troops, &c.—Masonry latrines have been in use during the past year for both the Native Infantry Regiments, but the trench system of latrines has just been brought into operation and is now under trial with the 10th and 16th Regiments N. I.

The Hospital latrine accommodation has been reported inadequate for the sick of two Native Regiments.

The trench system of latrines has been carried out during the past year with the most satisfactory results (except during the rains) for the Commissariat followers, the followers of the Royal Artillery, and the followers and residents in the Regimental Bazar of 15th Hussars.

The manure from the several manure yards is extensively purchased for top-dressing by landholders after it has lain buried for some months.

A crop of jowarree was grown during last rains on about 8 beegahs of land that had been used for trench latrines by the Commissariat followers.

## Section II. (e).—Cleanliness of the Station.

There is no want of cleanliness in the Station, the arrangements generally, for Officers' compounds in particular, are excellent in theory, and fairly carried out in practice, a proper supervision is exercised over Regimental Bazars and a certain number of sweepers are told off for every quarter in the Sudder Bazar, but the Sudder Bazar can never be kept properly clean until a regular system of drainage is carried out.

## Section II. (f).—Quality of Rations supplied to the Troops.

The Rations generally have been good, and sufficient for the maintenance of a good standard of health. The cooking is varied as much as possible.

The rates for the staple articles of food for Natives became cheaper in October, up to which month compensation had to be drawn for Native Troops and Establishments.

## Section II. (g).—Other defects.

There is no plunge bath for the Cavalry Regiment and only a very small one at a long distance from the Barracks for the Infantry Regiment.

The wooden floors in the upper stories of the old Infantry Barracks are in a very bad state and require renewal.

There are no fives courts for the Cavalry and Infantry Regiments, they should be built as soon as possible.

Accommodation for female patients, a dead house, a ward for contagious diseases and quarters for 1st Class Hospital Servants are required at the Native Infantry Hospitals, and the want of these has been represented to the Quarter Master General of the Army.

In the Staff Hospital a separate ward for Europeans is required, also a room for lunatics whether European or Native, or for cases of delirium tremens, also a ward for women, additional windows in the Native wards and quarters for a 1st Class Hospital Assistant and 2 Medical Pupils, and accommodation for the Apothecary of the Medical Stores.

The position of the slaughter yard in the Sudder Bazar is very bad, it is near the nullah previously referred to (a), and is surrounded on three sides by houses.

The Native liquor distillery is also in the middle of the Sudder Bazar, a most objectionable site.

The dhurumsalla is another objectionable building in the middle of the Sudder Bazar.

The number of wells in the Cantonment is insufficient and they are too far apart, the water in many cases having to be brought from distances exceeding a mile; more wells would be a great boon to the Troops and the residents generally. Wells in Officers' compounds as a rule being out of the question, on account of the great expense of sinking such wells in Mhow, which only Government can afford to meet.

During the months of April and May and until the rains commence there is barely sufficient water for drinking, cooking, and the most limited bathing purposes.

The only plunge bath for Troops in the Station cannot then be used, the water being required for the necessaries of life, and at no time is there sufficient water for arboriculture, for watering roads, or for gardens. The Station of Mhow requires very enlarged water arrangements for the health and comfort of the Troops, British residents and Native population. Ten more good wells at least are required in the Cantonment independently of the Bazar.

There are nearly 18 miles of roads in the Cantonment, for the annual repairs of which Rs. 7,200 only is granted. This amount is not nearly sufficient, and they are consequently in a very bad state of repair.

## Section III.—Measures adopted to improve the sanitary condition of the Station.

The sanitary measure for the year for the European Troops, has been the occupation of three new double-storied barracks built on the standard plan.

The trench system of latrines has been carried out with the most satisfactory results during the dry season, for the Native followers of the several Corps and Departments at Mhow, and it has now just been brought into operation for the Sepoys and families of both the Native Infantry Regiments.

A project has been laid before the Local Government by the Cantonment Committee for the reform of the drainage of the Sudder Bazar on a rough estimate framed by the late Captain Baillie, Excutive Engineer, amounting to Rs. 42,400. The chief difficulty is want of funds. The Agent Governor General for Central India is making an effort to obtain for us the revenue derived from the abkaree which at present swells the Imperial Budget. If we obtain this the scheme might be taken in hand at once. The main object in view is to discharge the drainage from the Bazar, and from the watershed on its western face, which now flows through it during the rains, into the Sarteir river below, *i.e.*, to the north of the bunds, which are annually constructed by the Public Works Department for the purpose of retaining the water during the dry season.

The Cantonment Committee has ordered all the wells in the Sudder Bazar to be cleaned out before the ensuing hot season, and at those which are chiefly used for drinking purposes to have the ground round them paved with stone for a distance of 6 to 10 feet according to their importance.

The Cantonment Committee has also selected another site to leeward of the Sudder Bazar, on which it is proposed to erect new slaughter-houses with a view to the removal of the slaughter-yard which is now in the middle of the Bazar, an estimate of the cost of this work is under preparation.

It is under contemplation to cultivate one-third of all waste land within Cantonment limits with dry crops, this will doubtless in some measure allay the malaria arising from the uneven ground, above referred to, in the vicinity of the Native Infantry Lines.

The necessity of constructing masonry platforms around all the wells in the Cantonment was represented to the Superintending Engineer C. I. last May, and that Officer states that the question is under the consideration of Government.

The necessity of providing additional Hospital accommodation for both the Native Infantry Regiments has been represented and is under the consideration of Government.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a,-g) already given in Section II.

Plunge baths on the standard plan should be constructed for the Cavalry and Infantry Regiments on sites conveniently situated to their Barracks.

The wooden floors in the upper stories of the old Infantry Barracks should be thoroughly repaired or renewed.

The drainage of the Sudder Bazar is undoubtedly very defective in many places, but on the whole, there is ample slope for the different drains, &c., down to the natural water-courses if properly constructed. But the whole requires to be carefully examined and the levels corrected, as they have hitherto been built on no system. The most important is to open out the drains where they are covered in—see that the bottom is on a uniform slope, or have it made so, if this is not the case; and by leaving the drains open, covered only with loose planks where required for the convenience of the shopkeepers, ensure their being always kept clean; and free from any accumulations of refuse and filth, so that they may be capable of discharging the rainfall when there is any.

This work might be begun first with the main street of the Sudder Bazar, but to complete the whole within any reasonable time will be impossible unless a special grant-in-aid is given for the purpose from year to year, or unless the abkaree revenue is credited to the Cantonment Fund as suggested.

Paved masonry platforms should be constructed around all the wells in the Sudder Bazar, but this cannot be done until more funds are available.

The Cantonment Magistrate observes that the conservancy of the Sudder Bazar will never be properly carried out until the sweepers become servants of the Cantonment Fund, as under the present system it is difficult to fix responsibility fairly. Tenants are punished

for filthy premises and sweepers for dirty streets and lanes, but the system of punishment which alone is legal, viz.: fine or simple imprisonment, is very little cared for by the last named class, and the Cantonment Magistrate thinks that he should be empowered to extend the provisions of the "Whipping Act" to sweepers for neglect of duty.

G. MALCOLM, Major General, Commanding M. D. A.

## Sanitary Report of the Neemuch Cantonment for 1871.

## Section I.—Health of the Corps forming the Garrison.

H. M.'s D/18 R. A.—General health good, sickness chiefly fever; one case of enteric fever terminated fatally, cause of disease unknown.

Detachment 1/8th the King's Regiment.—The amount of sickness in this Detachment for the past year has been very great. Number of admissions into Hospital 429, of these 231 were admissions for fever alone.

Deaths 3—

- 2 Enteric fever.
- 1 Continued fever.

The deaths are due to climate causes.

Detachment H. M.'s 59th Regiment.—From date of arrival at Neemuch (2nd April 1871) to present date, the health of the Detachment has been generally indifferent, 163 admissions. 90 of these were fever cases. 2 deaths: one from apoplexy, one from remittent fever.

H. M.'s 3rd Regiment Light Cavalry.—The health of the 3rd Regiment Light Cavalry has been good, but not quite so satisfactory as the last year 1870; in the present cold season there have been a large number of admissions into Hospital from fever, one of which proved fatal.

H. M.'s 22nd Regiment N. I.—Very bad. Two deaths, one from pneumonia and the other from hepatitis fever, chiefly due to over-crowding of the men in miserable huts not capable of containing a bed, so that the men were obliged to be on the floor.

## Section II. (a).—Drainage within Cantonment.

No defects in drainage, natural drainage.

Detachment of H. M.'s 1/8th King's Regiment.—None.

Detachment H. M.'s 59th Regiment.—None observed.

H. M.'s 3rd Light Cavalry.—Although there are no made drains in the Regiment lines, the water during the rains does not accumulate, but is conducted free from the lines by means of temporary trenches when necessary.

H. M.'s 22nd Regiment N. I.—Drainage of lines defective.

## Section II. (b).—Water Supply.

Water supply was very deficient last hot weather, quality good for drinking purposes.

Detachment Her M's 1/8th King's Regiment.—Water supply from wells ample in quantity, quality good. The only source of danger of contamination is from Natives making use of the wells used by Europeans.

Detachment H. M.'s 59th Regiment.—Water always reported good.

H. M.'s 3rd Light Cavalry.—Water is obtained from two wells in front of the Regiment lines for the use of the men and the horses, the quality is good, and although these wells were dry for a few days in the hot weather, the supply of water was not deficient.

H. M.'s 22nd Regiment N. I.—Water supply sufficient and of fair quality.

## Section II. (c).—Accommodation for the Troops.

No over-crowding in Barracks or Hospital.

Detachment H. M.'s 1/8th King's Regiment.—Barrack accommodation, nor over-crowding either in Barracks or Hospital.

Detachment H. M.'s 59th Regiment.—For some ten or twelve days on first arrival on 2nd April 1871, the Detachment was slightly over-crowded; since then, there has been ample accommodation in Barracks and Hospital.

H. M.'s 3rd Light Cavalry.—Although the men's huts are there is no crowding; the accommodation in the Hospital is good, but the Hospital building being far from the Regiment lines, it is thought inconvenient in cases requiring immediate medical assistance.

H. M.'s 22nd Regiment N. I.—Over-crowding in lines and bad ventilation.

## Section II. (d).—Conservancy.

No defects in the latrines, &c.

Detachment H. M.'s 1/8th King's Regiment.—Conservancy requires great attention, the latrines at times are very offensive. The urinals should be tarred once a week instead of twice a month.

Detachment H. M.'s 59th Regiment.—None observed in either.

H. M.'s 3rd Light Cavalry.—No defects in the conservancy have been brought to my notice.

H. M.'s 22nd Regiment N. I.—Latrines at either an inconvenient distance from the Hospital.

## Section II. (e).—Cleanliness of the Station.

The Sudder Bazar, as also the Regimental and the private compounds of the different bungalows, very clean.

## Section II. (f)—Quality of Rations supplied to Troops.

Rations good generally, market price fluctuates.

Detachment H. M.'s 1/8th King's Regiment.—Rations good.

Detachment H. M.'s 59th Regiment.—Rations good.

H. M.'s 3rd Light Cavalry. The men purchase for themselves good articles of food from the Bazar, no reports have been made of the inferiority of any articles.

H. M's. 22nd Regiment N. I.—No answer or explanation has been given to this question by the Medical Officer in charge of the Regiment.

No unusual deviation in the market prices during the past year.

## Section II. (g).—Other defects.

Liquor is very easily obtainable, and is very bad; consequently a good deal of sickness is caused by drinking and consequent exposure to the hot sun and cold night air.

Detachment H. M.'s 1/8th King's Regiment.—None.

Detachment H. M.'s 59th Regiment.—None.

- H. M.'s 3rd Light Cavalry.-None.
- H. M.'s 22nd Regiment N. I.-None.

## Section III.—Measures adopted to improve the sanitary condition of the Station

Tatty latrines have been built beyond the outskirts of the Sudder Bazar for the use of the residents of the said Bazar, the results of which I am not in a position to give my opinion, as the trench latrine system here is only an experiment.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

No suggestions brought to my notice in the report sent by the Medical Officer of the 22nd Regiment N. I.

- G. MALCOLM, Major General, Commanding M. D. A.,
- H. E. JACOB, Colonel, Commanding at Neemuch, and President of the Cantonment Committee.
- F. H. SMITH, Surgeon, Staff Surgeon, Neemuch.

## Sanitary Report of the Nusseerabad Cantonment for 1871.

## Section I.—Health of the Corps forming the Garrison.

The health of the European Troops in Nusseerabad cannot be said to have been altogether good, as out of a strength of 712 men including 1/8th Regiment and Battery of Royal Artillery there have been nearly two thousand admissions to Hospital, and the daily average sick has been 69, and this notwithstanding 46 men at the Sanitarium at Taraghur, some of whom were changed twice a month. The prevailing affection was ague, but there have been many cases of enteric fever.

Mortality was not high as only 13 fatal cases occurred.

To malaria certainly must the unusual amount of sickness be attributed. The health of the general community has been fairly good. The Natives in the Bazar suffered a good deal from intermittent fever, but no epidemic has prevailed either amongst them or amongst the European community.

The health of the Native Infantry Regiment has been very bad. There were 1,693 admissions to Hospital out of a strength of 615. Ague was the principal disease and caused chiefly by the malarious climate of Nusseerabad. There were 12 deaths, nine occurred from ague complicated with other diseases. The three remaining cases were respectively from bronchitis, epilepsy and heart disease.

The health of the Squadron of Cavalry was much better than the Infantry. The physique of the men being superior to the Infantry and their previous Station having been a healthy one, together with the better condition of their present Lines, will account for the difference.

There were 892 admissions out of a strength of 157. Ague caused 164 of these admissions. There was no death.

As regards the Native residents in the Bazars, &c., the movemany statistics show that out of a population of about 18,000 souls 461 persons died during 1871. In 1870 the population being some 300 less, 334 persons died.

Fevers of a very marked and deadly type have prevailed at the town of Ajmere, 14 miles distant; thus Nusseerabad has shown very favourably, the year having been an unusual one and many natives of Ajmere have been greatly benefitted by the change to this Cantonment.

## Section II. (a).—Drainage within Cantonment.

There are no defects in the drainage prejudicial to the health in the Cantonment of Nusseerabad, the drainage is natural into watercourses east and west of the Military Lines and Bazar.

Four jheels or tanks have been formed within the last few years for the purpose of banding up water for irrigation and cultivation purposes, and these are considered to add to the healthiness of Camp by promoting the growth of trees also on the bunds of the tanks. There are no marshes in the Station or its vicinity. In fact the extreme dryness and variableness of temperature so much complained of is principally due to excess of drainage, and the rain-fall instead of being stopped on the spot in quantities sufficient for cultivation and to fill and improve the water in the wells, is allowed to rush away to other lands beyond Cantonment limits. Improvement in this respect could be obtained at a moderate outlay, an outlay on which a fair return of interest would accrue by the increased value of the land irrigated, the produce of trees, &c., &c.; all that is required are moderate annual grants-in-aid to Cantonment funds.

#### Section II. (b).—Water Supply.

This subject has been partly reported on under Section II (a.)

There are 145 wells within Cantonment limits including pucca tanks or diggees. In 1869, before the rains, all were examined; 39 were found to be dry and the remainder were found to contain an average depth of 8 feet of water, but of the latter 63 contained less than 8 feet, of which 46 wells or tanks had a water depth of less than 6 feet, 36 wells contained less than 5 feet, 26 wells less than 3 feet, of which 10 contained only 1 feet of water.

The deepest well has a total depth of 88 feet, and in 1869 the depth to spring level was 76 feet. The average depth to spring level is 88 feet. There are 13 tanks or diggees of sizes which contain potable water, being fed from ensface drainage, 3 of these empty rapidly from infilteration, 3 are reserved for the use of the inhabitants of the Suddar Bazaar and are insufficient for the purpose. The remainder are kept in reserve for drinking water for the Troops in case the potable water well (at Delwara) beyond Cantonment limits should fail. With the above exceptions the water in all the wells has been pronounced unfit for use by human beings. See Reports of Analysts at Agra, Bombay, and Calcutta, by whom the same has been tested. The water however of many of the wells though brackish is not objected to by Natives, who partake freely thereof with or without deleterious effects, a subject on which there are no statistics.

There are trees near most of the bunds of tanks, but with this exception they are protected from sources of contamination. The wells being excepted through 46 and 88 feet of

gneiss rock are subjected only to such contamination as may be offered by the filtration of the water through rocks containing deleterious matter organic or inorganic.

The water is drawn by hand or bullock power, and is distributed by portage in mule carts, on camels with double puckalls or bullocks in a similar manner, on the backs of bheesties, and in water pots on the heads of women.

## Section II. (c).—Accommodation for the Troops.

The accommodation of the European Garrison both as regards Barracks and Hospitals has been good and ample.

At no time was there any over-crowding.

The roofs of the Native Infantry Lines leaked during the monsoon rains and caused much discomfort to the inmates and probably induced a proclivity to attacks of ague.

The Hospital being crowded with the increased number of sick in September, tents were pitched in the Hospital compound for extra accommodation.

## Section II. (d).—Conservancy.

The sewage is conveyed from the Lines of the European Corps in tank carts and is buried in trenches at the manure yards which are all to the leward of the Lines and at some distance. The same system is in vogue for the Native Troops and Native residents, but not so complete.

The ground cannot most unfortunately be cultivated as there is no water to effect this, but the Cantonment Committee have voted Rs. 500 for a well to be dug near one yard with a view to cultivate the trenched land.

The ground is too rocky to admit of the trench system for Natives though a small experiment is being made with the Commissariat followers.

The nature and condition of the Native necessaries in the Bazars are not satisfactory. The latrines are mud walls without roofs and the ordure falls on a stone slab and the urine runs into an earthen pot. Iron receptacles for final removal are used.

The Native Regiment and Cavalry latrines are in a very bad state, they are merely grass and bamboo enclosures and afford no shelter, being open.

## Section II. (e).—Cleanliness of the Station.

The Station is remarkably clean, the compounds round the bungalows are large and there is no growth of underwood to conceal any filth.

The Native Bazars have plenty of roads through them, and the large number of urinaries erected tends in a great measure to keep them clean.

There are latrines for the servants in each compound containing a bungalow, and these are fitted with iron pans and strict measures enforced, and the ordure removed daily in iron vessels.

The dry rubbish is also removed daily by a separate establishment.

## Section II. (f).—Quality of Rations supplied to Troops.

There is no inferiority in the quality of the Rations supplied to the Troops at this station.

The market rates for the staple food of Natives have been very easy during the year and the compensation payable by Government to the Native Troops has been very trifling in amount. Not that the Native Troops seem to benefit by this, for they will remit sums to their homes which they cannot afford, and when they do not eat and drink as usual, they are much more liable to fever and debilitating diseases.

#### Section II. (g).—Other defects.

There have been no other defects requiring notice.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

The Station is well placed as regards site, being built on a slightly elevated ridge with a gentle slope to the front and back. Ample perflation of air is obtained from the total absence of anything like over-crowding of buildings together either as regards the Barracks or private residences of the community. At no time of the year has there been any accumulation of surface water. The water channels act well and quickly carry off the rainfall during the monsoon. The sanitary arragements have been good and conducted with scrupulous care and exactness.

Every encouragement he been given to persons willing to enclose land for gardens and planting trees.

Very large Horticultural gardens are in progress and great efforts to plant the same with many other places have been this last year met with success; over 1,000 trees have been planted in or about the roads and about 3,000 in the garden and enclosures which are to the west of the Cantonment, and will in time yield a large annual revenue, besides keeping off the sand drifts which now occur during the frequent high winds prevailing in this Cantonment.

The cultivation of good vegetables will also be followed out during the ensuing year, and belts of trees to the west of the Station will be formed, as the shelter given by those springing up in the Horticultural gardens is found to be very valuable, as the hills to the north and west of the Station attract a great deal of rain; it is believed the growth of trees will affect the Station very favourably.

The intention to cultivate a manure yard by sinking a well has been already mentioned under Section II. (d).

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a - g) already given in Section II.

Under heading (b.) Water Supply. The crying wants of this Cantonment is plenty of tank water to admit of gardens being cultivated; at present only about three residents keep up gardens, as the supply in the wells is not only liable to run short, but being in many cases brackish the vegetables produced are not easy to cook. Schemes for a tank at a higher level than the Cantonment near the base of the neighbouring hills have been mooted for the last 10 years and estimates have been framed and levels taken, showing that such a scheme is perfectly easy of accomplishment.

This once accomplished, the face of this Cantonment would be entirely changed, as in many parts the soil is very good in quality. Heading (c.)

The Native Infantry Lines are badly constructed and badly ventilated, the roofs being rotten and the houses being double or back to back. The Lines are also crowded together, and would require every other row to be removed to give sufficient space.

Their latrines are as bad as bad can be, and as the trench system cannot be brought into play, it is high time a fixed pattern for latrines for the Native Infantry should be approved and their building commenced.

The latrines in the Bazar will be changed from their present condition so soon as funds are available, but the inhabitants themselves pay their cost and the actual working establishment.

Every 3 years the trench manure yards should be sbandoned, a well dug and a garden formed, new ground of which there is plenty being taken up in their neighbourhood; unless this course is pursued the ground in course of time must be exhausted and the value of the manure thrown away, whereas if this course is adopted, a certain portion of each garden so formed will be allowed to lie fallow each year and the filth buried there, such being cultivated the next and soon. The saving in digging soft instead of hard ground and the benefit to the funds of the Cantonment Committee by the rent of the land would give a very handsome return on the outlay for the well, and in time contractors will remove and bury filth on the most moderate terms; a beginning is only required and a careful supervision.

G. MALCOLM, Major General, Commanding M. D. A.

## Sanitary Report of the Kurrachee Cantonment for 1871.

## TROOPS STATIONED AT KURRACHEE.

B/18 Royal Artillery.
66th Regiment of Foot (5 Companies).

27th Regiment N. L. I., or 1st Belooch.

## Section I.—Health of the Corps forming the Garrison.

The Kurrachee Garrison during the year 1871 consisted of the 66th Regiment of Foot, the B/18th R. A., and the 2nd Belooch Regiment.

This latter Corps was relieved in November by the 1st Belooch Regiment from Hydrabad, with which Regiment it exchanged Stations.

The health of the Troops during the past year has been very good; the prevailing diseases appear to have been fevers. These caused 471 admissions into Hospital, out of a total of 1,037, in the 66th Regiment, or 45.4 per cent.

The average strength of the B'18th Royal Artillery during the past year was 145, and the number of admissions to Hospital 215.

Only one death occurred in the B/18th Royal Artillery, viz., from suicide.

In the 66th Regiment 6 deaths, viz.-

3 from Enteric Fever.

- 1 ,, Apoplexy.
- 1 ,, Delirium Tremens.
- 1 " Suicide.

The Medical Officer of the 66th Regiment states that the causes to which the prevalence of fevers appears attributable, are the objectionable site of the Cantonment on what evidently has been in former days the bed of a river, or watercourse; the alluvial nature of the soil and the retentive clayey nature of the subsoil.

The constitution of the water supply is also of an objectionable nature, and capable of producing sickness.

The 1st Belooches having only very recently arrived have not been considered as regards the Troops forming the Garrison last year.

The health of the 2nd Belooches now at Hydrabad has been very good.

The general health of the European and Native community has on the whole been very good.

There is a Sanitarium within Cantonment limits at Ghizree, about 21 miles from Kurrachee, and on the seashore. The Sanitarium is available for all sick men from the Punjaub and North-West Provinces who may require sea air.

During the year 1871 there were six deaths at the Sanitarium, but not being confined exclusively to the Regiments composing the Garrison, need not be particularly specified.

## Section II. (a).—Drainage within Cantonment.

There is no regular system of drainage, but the want of it has not been felt during the past year from the fact that little or no rain has fallen.

The site of the Cantonment however being flat there is hardly any natural fall for rain to run off, and when rain does fall it lies for some time until absorbed into the ground.

At low water there is a large expanse of muddy and marshy surface exposed between the Cantonment and the sea, but the existence of it does not appear to exercise any marked influence upon the health of the Troops.

At the Ghizree Sanitarium the drainage from the natural declivity of the ground is very good. There is a valley situated about 400 yards behind the Barracks, the soil of which is sandy and without vegetation, but when heavy rain falls (as happened in 1869) it becomes marshy and in parts covered with rank vegetation. It would be advisable to have this valley drained.

## Section II. (b).—Water Supply.

The water supply is ample in point of quantity, but its quality is objectionable in consequence chiefly of the amount of saline impregnation. In the 66th Regiment the water is obtained from the Commissariat wells at the north end of the Camp, and conveyed through earthen-ware pipes for a distance of considerably over a mile into a large resorvoir in Barracks, from whence it is distributed by means of bheesties.

The water for the B/18 R. A. is conveyed to Barracks in iron tanks.

In the Belooch Lines the water supply is from one well nearly a quarter of a mile distant. The water is brackish but plentiful; under ordinary care none of the water supplies are liable to be contaminated from any sources or in the mode of draining and distribution.

The well from which the 66th Regiment derive the water is however in the vicinity of gardens and broken ground, and the neighbourhood has to be carefully inspected periodically to prevent defilement. It is on the whole kept clean. Measures have been under consideration for filtering this water en routs to Barracks.

At the Ghizree Sanitarium the water is supplied by the Commissariat from Government wells at Kurrachee. It is good and the supply ample.

## Section II. (c).—Accommodation for the Troops.

The Barrack accommodation for the European Troops is very good and there is no overcrowding.

The Belooch Regiment during the past year was moved from the old Native Lines and accommodated in the old Depôt Barracks, which were converted to suit the requirements of Natives. The accommodation is reported good and in excess of what is required. The second class servants' quarters in the Hospital are however said to be too limited for the number of occupants.

At Ghizree Sanitarium the Barrack accommodation is sufficient and there is no overcrowding: The Barracks are old and the floors of earth. It would be a great advantage to have the front verandah of the Barracks screened in by trellis work to protect the men from the strong glare of the afternoon sun.

Digitized by Google

## Section II. (d).—Conservancy.

The latrines for the Europeans are good. They are constructed for the dry-earth system and work exceedingly well. The urinaries are good.

The filth and refuse water from the lavatories is carted away daily and deposited at a considerable distance leeward of Cantonments.

The Native latrines are built of pucka brick, and fitted with iron pans.

No part of the Cantonment is manured or cultivated with Station sewage, but the contents of the manure yard north of the Cantonments are sold monthly and utilized for manuring the fields and gardens which extend all along the banks of the Lyaree.

At Ghizree Sanitarium the dry-earth system of conservancy is well carried out.

There are no defects in the condition of the latrines or urinals.

## Section II. (e).—Cleanliness of the Station.

The Station generally is kept very clean. Only a very small portion of it is in Military limits, but the Suddur Bazar and the chief portion of Camp is under Municipal supervision and is very carefully looked after by the Municipal authorities.

## Section II. (f).—Quality of Rations supplied to Troops.

The rations have on the whole been very good.

The market price of the food of the population generally has been unusually high, owing to little or no rain having fallen during the past year, and also probably to the large quantities of grain which have been exported to Persia on account of the famine in that country.

## Section II. (g).—Other defects.

Nothing particular.

Section III.—Measures adopted to improve the sanitary condition of the Station.

Nothing particular.

The question of filtering the water supplied to the 66th Regiment as it leaves the well and before it pass into the pipes is still under consideration.

Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.—g.) already given in Section II.

Nothing.

H. BEVILLE, Lieut.-Colonel, Commanding at Kurrachee, and Ex-officio President of the Cantonment Committee-

## Sanitary Report of the Hydrabad (Sind) Cantonment for 1871.

## TROOPS STATIONED AT HYDRABAD.

66th Regiment of Foot (4 Companies)

29th Regiment N. I. or 2nd Belooch.

## Section L—Health of the Corps forming the Garrison.

The health of the Corps, both European and Native, forming the Garrison of Hydrabad during the year 1871 has been good. Ague was the prevailing disease amongst the European and native population in the Cantonments, cause being the influence of the climate.

Ague was more prevalent in the months of January, September, October and November amongst the Europeans; and in the months of January, Febuary, October and November the Native population suffered most from this disease.

## Section II. (a).—Drainage within Cantonment.

On the adjacent plains, which are alluvial, and consequently productive of malaria under certain favourable conditions, there are several canals and tanks at various distances from the Cantonment, which are supplied by water from the river Indus. Soon after the water has begun to subside in these canals and tanks, (which takes place usually early in September of every year), ague sets in and continues prevalent until they have dried up, when it immediately declines.

A considerable amount of malaria must be generated in the process of the drying up of the beds of these canals and tanks, and the prevalence of ague at this season might in a great measure be ascribed to this cause.

## Section II. (b).—Water Supply.

The water supply is good, and sufficient in quantity as far as is known and is derived from wells which are situated for the most part below the plateau. That for the Detachments 66th Regiment is taken from a well about  $\frac{3}{2}$  of a mile distant on the north side of the Barracks. This is fed by an under current from the river Indus, and in its vicinity is a large tank which supplies the cattle with water for part of the year and becomes dried up in the cold season.

#### Section II. (c).—Accommodation for the Troops.

There are no defects in the accommodation for the Troops, European and Native, with the exception of the Native Commissioned Officers in the Belooch Lines. These dwellings consist of 12 semi-detached bungalows at the east end of the Lines, but are so small, that sufficient space is not allowed to furnish comfortable or respectable quarters for Native Commissioned Officers. There is no ventilation from above, consequently the rooms are close and unhealthy, from insufficient ventilation. Each of these bungalows is divided into two equal parts by a central wall, for two Native Officers to live in, one of these being only allowed two small rooms.

#### Section II. (d).—Conservancy.

There are no defects in the system adopted for carrying out conservancy in this Station.

## Section II. (e).—Cleanliness of the Station.

None.

## Section II. (f).—Quality of Rations supplied to the Troops.

The Rations supplied to the Troops are of good quality, no unusual deviation in the market price of the food of the population, &c. &c.

## Section II. (g).—Other defects.

None.

## Section III.—Measures adopted to improve the sanitary condition of the Station.

In the month of September in consequence of an offensive exhalation having arisen from a tank situated close below the Fort, and having been carried by the prevaling winds across it, it was recommended, that the men composing the Fort Guard should be placed under canvas at the opposite side of the Fort. This was done for a short time, and it was

decided to have the tank filled up with gravel as soon as possible. This was immediately commenced; to prevent the escape of foul exhalations which were also neutralized by carbolic acid and lime.

The work is still being carried on, and when completed will doubtless be attended by good results in a sanitary point of view.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.—g.) already given in Section II.

The accommodation for Native Commissioned Officers in the Belooch Lines requires improvement.

- A. FAULKNOR, Lieut.-Colonel, Commanding at Hydrabad, and President Board of Health.
- J. H. BEVILLE, Lieut.-Colonel, for Brigadier General Commanding Sind District.

## Sanitary Report of the Jacobabad Cantonment for 1871.

## TROOPS LOCATED AT JACOBABAD.

1st Regiment Scinde Horse, 2nd do. do. 3rd Regiment Scinde Horse. 30th Regiment N. I. or J. R.

## Section I.—Health of the Corps forming the Garrison.

The health of the Troops during 1871 has been better than during 1870. The percentage of treated to strength was 114.3 and the deaths amounted to the high rate of 2.8 per cent. No Corps stationed for any length of time in such a very unhealthy station as Jacobabad could be expected to have good health. The 3rd Sind Horse is the least unhealthy, and the 30th N. I. the most so. The average percentage of deaths for the Native Troops in the Presidency for the last five years was '95, that for the Troops at Jacobabad in 1871 was 2.8, and the average percentage at Jacobabad for the last five years was 2.5. The extremes of temperature which prevail here, viz. 177° F. by solar thermometer in the rays of the sun to below freezing point in the mornings in the winter, combined with malaria more or less prevalent all the year round, undermines the constitutions of the most hardy among men or officers. Most deaths occur from diseases of the respiratory organs and malarious diseases. The principal Medical Officer reports that long residence at Jacobabad is the great cause of the heavy death rates, and that nothing short of moving Regiments in rotation to other stations will do any good.

## Section II. (a).—Drainage within Cantonment.

The Frontier Districts being situated in the valley of the Indus, malaria prevails to a great extent. The country around is subject to annual inundation and all cultivation is carried on by irrigation.

## Section II. (b).—Water Supply.

Good water is procurable from numerous wells, but the Native population are apt to use water from canals and tanks, which is of bad quality.

## Section II. (c).—Accommodation for the Troops.

With the exception of the new Lines of the 3rd Sind Horse the men's huts are perfectly unsuited to live in.

The accommodation in the Hospitals is much under the regulation allowance, and insufficient for the large number of sick in this place.

## Section II. (d).—Conservancy.

The sole Government allowance for conservancy in this large Camp, with fifteen miles of roads, is only Rs. 27 per mensem. The conservancy of the Sudder Bazar is bad.

## Section II. (e.)—Cleanliness of the Station.

The Sudder Bazar is defective in point of cleanliness. There are no funds to improve its condition.

## Section II. (f).—Quality of Rations supplied to the Troops.

The food for the Troops (supplied by traders in the Sudder Bazar) is good and of fair price.

## Section II. (g).—Other defects.

The family Lines of the 4th Sind Horse and 2nd Jacob's Rifles (disbanded Regiments) are unoccupied and in a ruinous state. There is in the middle of Camp a Bazar in the same condition.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

Trees have been lopped and thinned and some ruins cleared away. The Sudder Bazar has been much improved by better ventilation, houses being built, and greater cleanliness being enforced.

Want of funds has prevented other improvements.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

Roads should be macadamized, ruins removed, and a better system of conservancy introduced.

Funds are required for these purposes.

R. PHAYRE, Commandant in Chief Frontier Field Force. H. BEVILLE, Lieutenant Colonel,

For Brigadier General Commanding Sind District.

## Sanitary Report of the Aden Cantonment for 1871.

## TROOPS LOCATED AT ADEN.

Aden Troop.

2 Batteries of Garrison Artillery.

No. 1 Company Native Artillery.

No. 3 Company Sappers and Miners.

3rd Battalion 60th Rifles.

5th Regiment N. L. I.

## Section I.—Health of the Corps forming the Garrison.

The health of the European Troops appears to have been good during the year, with the exception of the period when an epidemic of dengue prevailed. The epidemic commenced in July, and during that and the succeeding month few Europeans or Natives in the Settlement escaped it.

17 F

A special report was made regarding the epidemic by Dr. Reade, Riffe Brigade, then Senior Medical Officer British Troops, which was published in the proceedings of the Sanitary Commissioner for Bombay, for the months of July, August, and September 1871.

The mortality amongst the European Troops during the year is reported to have amounted to seven.

The mortality amongst Native Troops has been twenty, being fourteen in excess of the previous year, which may be accounted for by the men of the 5th Native Infantry being older and less robust than those of the 12th Native Infantry stationed here in 1870.

The prevailing diseases amongst Native Troops appear to have been dengue, ague, scurvy, and debility.

## Section IL (a).—Drainage within Cantonment.

The drainage is satisfactory. There are no jheels or marshes in the vicinity.

## Section II. (b).—Water Supply.

Condensed water is supplied to the Troops for drinking: it is of fair quality, and the quantity has been found sufficient.

The water obtainable by the Native inhabitants is bad, dear, and scarce. Purchasers have to pay one rupee per hundred gallons for Shaik Othman Aqueduct water, and then carry it home generally a distance of about two miles.

Most of the wells are now dry, but at all times the water they contain is of inferior quality; that of the greater number being unfit for drinking.

Water is also brought for Natives from Huswab on camels, and is sold at the same price as the aqueduct water, which it resembles in quality.

An improved water supply appears to be the great want in Aden.

## Section II. (c).—Accommodation for the Troops.

The Barrack accommodation for the Troops, with the exception of the Battery stationed in Camp, is considered sufficient and satisfactory in all respects.

The additions now being made to the Artillery Barracks in Camp appear to be all that is required.

The Hospital accommodation for the European Troops in Camp is neither good nor sufficient, but as it is intended that only two Companies of European Infantry shall be stationed in Camp, it is supposed that when this arrangement is carried out the accommodation will be sufficient. On the other hand the Hospital accommodation, which is at present sufficient for the European Infantry at Steamer Point will, on the proposed arrangement being carried out, be very insufficient.

#### Section II. (d).—Conservancy.

The condition of the latrines and urinaries and the system of conservancy generally appears to have been satisfactory.

Formerly lime was supplied on indent by the Barrack Department, but it has been discontinued. The latrines and urinaries are not considered so free from smell as formerly in consequence of the want of lime.

No part of the Cantonment is manured or cultivated.

## Section II. (e).—Cleanliness of the Station.

No want of cleanliness in any part of the Cantonment.

## Section II. (f).—Quality of Rations supplied to Troops.

On the whole the quality of the rations has been satisfactory.

The mutton is generally good; the beef inferior.

## Section II. (g).—Other defects.

The fresh straw for bed-cases supplied to the European Infantry was not renewed at the proper period. On the Commissariat Officer being written to on the subject, he replied that, in consequence of fresh straw not having been forwarded from Bombay he was unable to supply it. As straw is not procurable at Aden there appears to have been an oversight on the part of the Commissariat Department.

It has already been proposed to Government to introduce the Contagious Diseases Act (No. XIV. of 1868) into Aden, or to extend the rules passed by His Excellency the Governor in Council under Clause 7 Section XI. of Bombay Act III. of 1867 to such distance beyond the Cantonment limits as may include the whole Settlement.

# Section III.—Measures adopted to improve the sanitary condition of the Station.

Pipe drains and iron cess-pans have been provided for the Barracks and Hospitals to carry off refuse water. Improved ovens and boilers have been erected and the Bakery has been improved. A large water condenser has been erected in Camp and been in use during the year.

Latrine accommodation has been provided for the Native followers of the Artillery and European Infantry.

All house-owners have been made to build rubbish bins and latrines for the use of servants and other Natives residing in the compounds.

# Section IV.—Suggestions for remedying any of the defects still existing under the several heads (a.-g.) already given in Section II.

- 1. Improved supply of water.
- 2. Improved Hospital accommodation for European Troops either in Camp or at Steamer Point as the distribution of the Troops may necessitate.
- 3. Introduction of Act XIV. of 1868, or extension of Section XI. of Bombay Act III. of 1867.
- 4. Supply of lime or other disinfectant should be allowed for latrines.
  - E. C. BEALE, Brigadier General, President.
  - C. W. TREMENHEERE, Major General, Political Resident.
  - W. M. DUCAT, Captain, R. E.
  - W. W. TAYLOR, Colonel, H. M.'s 5th N. L. I.
  - A. G. YOUNG, Surgeon 60th Rifles.
  - C. M. GRIFFITH, Major, Brigade Major.
  - F. P. FORTEATH, Cantonment Magistrate and Secretary.

Members.

# GENERAL ORDERS RELATING TO THE SANITARY CONDITION AND COMFORT OF THE TROOPS.

#### (Published during 1871.).

## G. G. O. No. 144 of 22nd February 1871.

The steel-tinned basins, introduced in lieu of the copper ones, will be supplied to European Troops in the proportion of 20 per Battery, Troop, or Company, and 4 for the married men of each.

They will be tinned once every six months by the Commissariat Department on the requisition of Commanding Officers.

These basins will not be supplied to Troops occupying Barracks having lavatories fitted with basins as fixtures.

In accordance with the Bengal Scale these basins will be issued to Hospitals in the following proportion:—

Cavalry Regiment { Male Hospital Female ,,	$\begin{array}{c} 25 \\ 6 \end{array}$
Infantry { Male Hospital Female ,,	43 9
Battery of Artillery $\left\{ \begin{array}{ll} \text{Male Hospital} & \dots \\ \text{Female} & ,, \end{array} \right.$	7 2
Wing of Infantry or Male Hospital	16 4
Native Troops Cavalry or Infantry	4

G. G. O. No. 150 of 22nd February 1871.

In continuation of G. G. O. No. 577 of 1869, the Government of India have approved of the following Sea Outfit for female Insanes, the wives and daughters of Soldiers, when sent home by the Cape route:—

Bedding.	Clothing—continued.
Bed 1	Shoes 1
Blankets, Europe 2	Stockings, woollen, black 6
Pillow 1	,, cotton 6
	Handkerchiefs 6
Clothing.	
Boots, strong pair 1	Necessaries.
Drawers, cotton pairs 12	Brush l
Gowns, Linsey, brown 1	Comb 1
" Alpaca 1	Chest, with lock and key 1
,, Night, cotton 6	Plate, tin l
Hat 1	Pot, tin 1
Petticoats, flannel, white 2	Soap, bar lb. 1
,, ,, dark 1	Spoon, iron 1
Shawl 1	Towels 6
Shifts 12	

G. G. O. No. 373 of 17th May 1871.

With reference to the Orders noted in the margin, the following Scale of Establishments,

Water and Conservancy, allowed to British

2. An additional hand bheestie per Company or Battery is allowed for European Corps occupying upper-storied barracks.

<sup>\*</sup> Note.—Detachments do not include the following Sanitaria and Depôts, which will continue as heretofore to entertain Establishments in accordance with the scale laid down for "Detachments of all Arms" in G. G. O. No. 55 of 1864:—

The Colaba Sanitarium.

The Poorundhur Sanitarium.

The General Depôt, Poona.

The Depôt Deolalee (during the non-marching season and during the trooping season for such number of troops as may be located there in excess of the strength of a Regiment of Infantry.)

<sup>†</sup> The Conservancy Establishment will be employed in cleaning the barracks, out-offices, and vicinity of the men's quarters, and is also intended to meet the purposes specified in G. O. C. No. 278 of 1865.

18 F

3. During the dry season when, at some stations, the permanent establishment for water supply is insufficient, the Quartermaster General, under the orders of His Excellency the Commander-in-Chief, may authorise the entertainment of one extra hand bheestie per Company or Battery during a period of not more than five months in each year. The pay of this extra establishment should be drawn in contingent bills, countersigned by the Quartermaster General.

Cavalry Infantry	Barracks, Barracks,	Poona (Wanowree).	locat
**	,,,	Mhow.	to be
**	,,	Neemuch.	100 00
"	,,	Aden.	i No.

4. The Conservancy Establishments of Regiments located in the Barracks, as per margin, will continue to be admitted to the extent laid down in G. G. O. No. 55 of 1864, i. e.

	Halalcore Bheesties.	Halalcore Sweepers.
For a full Regiment of Cavalry	1	1
" ,, of Infantry	2	2
in addition to the number laid down in the above scale.	٠	

- 5. Special charges are sanctioned for the supply of water to plunge baths where those exist. The charges should be entered under the head of "Plunge Baths" in the bills for regimental water-supply preferred by Regimental Paymasters, or those performing their functions, on Divisional Paymasters.
- 6. When a Battery, Troop, or Company is divided, the establishments must be proportionately divided, so as, on the whole, not to exceed the authorised number.
- 7. In calculating the establishments for Detachments or Depôts of Recruits, Volunteers and European Soldiers in general, with their families, 100 adults, male or female (two children being reckoned as one grown up person), are to be considered as equivalent to one Troop or Company.
- 8. Whenever Commanding Officers may consider it advisable, for the better carrying out of the conservancy of their barracks, to employ any particular class of conservancy followers, instead of the class named in the regulations, they should obtain the sanction of His Excellency the Commander-in-Chief to their doing so, but it must be remembered that the aggregate cost of the conservancy establishment employed must not exceed the aggregate amount sanctioned by the regulations according to the current rates of the bazar. This latter amount can in no case be exceeded without the special sanction of Government.
- 9. Where the authorised water and conservancy establishments of Regiments and Batteries are, from any cause, which must be distinctly stated, found insufficient, Commanding Officers should, in the first instance, represent the matter to the Quartermaster General for the orders of the Commander-in-Chief on the subject; but as a rule, the sanction of Government is to be obtained before any extra establishments are entertained. If, however, serious inconvenience would attend delay, sanction may be accorded at Army Head Quarters, subject to confirmation by Government.

The Right Honourable the Governor in Council is pleased to direct that, in obedience to the orders of the Government of India, a Census be taken, on the night of the 15th June 1871, of all British-born Commissioned Officers (and their families) belonging to the Staff Corps or Local service, and of British-born Warrant and Non-Commissioned Officers and others (their families included) employed in Army Departments.

The requisite number of forms, with instructions for the filling up of the same, will be issued from the Bombay Education Society's Press.

The Heads of the Departments noted in the margin should send immediate instructions

Adjutant General's Quartermaster General's. Judge Advocate General's. Ecclesiastical. Ordnance. Public Works.

Commissariat.
Finance.
Clothing.
Army Education.
Indian Medical.
Veterinary.

to the Superintendent of the Press regarding the number of forms they may require for the members (of all ranks) serving in their Departments, and whether the forms should (to prevent delay)

be distributed direct from the Press to the individuals for whom they may be required. In this case a list of the addresses, and the number of forms for each, should be sent to the Press.

The Returns, when filled in, are to be transmitted as follows:-

- 1.—Those for Staff Corps and Local Service Officers through Officers Commanding Stations to the Adjutant General.
- 2.—All others through Heads of Departments to the Secretary to Government, Military Department.

It is to be understood that this order does not refer to any individual of Her Majesty's British Service whose name has already been returned in the Census taken under Horse Guards G. O. No. 19 of 1871.

If it be found impracticable to take the Census on the night of the 15th June, it should be taken on the very earliest subsequent date.

G. G. O. No. 412 of 7th June 1871.

In continuation of G. O. No. 692, dated 19th October 1870, it is notified that the Government of India have sanctioned the addition of one Bheestee and of one Sweeper to the Hospital Establishment of the Sappers and Miners.

G. G. O. No. 469 of 5th July 1871.

Referring to G. G. O. No. 176 of 1870, it is ordered that if the ground on the line of march cannot be made sufficiently smooth, or if the ground be unavoidably damp, the Commanding Officer is allowed to issue, on certificate from the Medical Officer, an extra quantity of straw per day for bedding to each European Soldier.

G. G. O. No. 498 of 19th July 1871.

The number of Sweepers allowed for seven Companies of European Infantry when marching or in the field is 14, and not 11 as shown in G. G. O. No. 373 of 1871.

G. G. O. No. 605 of 31st August 1871.

With reference to General Orders, No. 442 dated 10th July 1867, and No. 150, dated 4th March 1868 the Circles of Medical Superintendence of the British Medical Service will, in future, comprise the following stations:—

## G. G. O. No. 692 of 16th October 1871.

With reference to the instructions of Government, conveyed in their Resolution in the General Department, No. 2446 of 4th September last, para. 13, the following copy of a Circular issued by order of His Excellency the Commander-in-Chief to Officers Commanding Divisions and Districts is published for the information and guidance of those concerned:—

" No. 5512.

Adjutant General's Office, Poona, 15th September 1871.

CIRCULAR MEMO.

With reference to the forthcoming Census of all subjects in India to be taken under the operation of Government Resolution in the General Department, No. 2446, dated 4th September 1871, on the 15th December next, General Officers and Officers Commanding

- \* European and Native. Stations are informed that the portion of the Census for which the Military Department is responsible comprises all Commissioned, Warrant and Non-Commissioned Officers, Rank and File,\* with their families, and those of their followers and their families, who may reside within Military Lines or at their Masters' Quarters.
- 2. Such Officers, Warrant and Non-Commissioned Officers, Rank and File, with their families and their followers and families who may not be residing within Military limits, will be accounted for by the Civil Authority.
- 3. Any followers who may reside at their own houses are not to be enumerated with the Military, but will be accounted for by the Civil Authorities in their own residences.
  - 4. Forms will be allotted at the rate of one form to every five married or unmarried persons. Estimates for which, allowing also for a little surplus,\* must be made accordingly for each Station, and forwarded to this office as early as possible.
- 5. The forms will be forwarded to each Station direct from the Sanitary Commissioner as soon as practicable after the receipt of the Estimates.
- 6. General Officers and Officers Commanding Stations will understand that the form is to be furnished only to those residing within the prescribed Military limits, and that to prevent any individual whatever being shown in two returns, it will be advisable that Officers Commanding place themselves in communication with the Magisterial authority at their Stations as to the Military and their followers furnished with forms direct from his office.
- 7. Any questions that may arise regarding the actual enumeration of the Census should be referred direct to the Sanitary Commissioner, Poona.

By order,
(Signed) C. T. Aitchison, Colonel,
Deputy Adjutant General of the Army."

## G. G. O. No. 744 of 1st November 1871.

Under the orders of the Government of India, and with reference to paragraph 16 of G. G. O. No. 395 of 1869, the proportion of tatties to be supplied to Barracks and Hospitals will be restricted in future to one half the number of apertures on one side only of the building.

## G. G. O. No. 796 of 22nd November 1871.

The Government of India have ruled that where masonry drains are not needed, the surface drainage of the Lines of Native Troops should be constructed by the Troops occupying the Lines, but when masonry drains are required they should be constructed by the Public Works Department at the cost of the State.

G. G. O. No. 839 of 12th December 1871.

Trees standing in the compounds of houses within Cantonment limits are not private property.

When for sanitary or other reasons it is desirable to lop or cut down any such trees, the timber is to be considered the property of the house owner.

Owners or occupants are prohibited from cutting down or lopping any trees within the compounds without the consent of the Cantonment Committee.

G. G. O. No. 862 of 20th December 1871.

The following General Order by the Government of India, dated 12th December 1871, No. 1077, is republished:—

"No. 1077 of 1877.—In supersession of all existing orders on the subject, and with a view to uniformity of practice, the Right Honourable the Governor General of India in Council is pleased to prescribe the following rules in regard to the issue of Bedding to the British Troops in the three Presidencies:—

## FIRST ISSUE PER MAN.

To be the property of the Soldier.

- 1 Thick English Blanket, 7 × 4 feet, and weighing 3 lbs. 12 oz.
- 1 Pair Cotton Sheets, 7 × 4 feet.
- 1 Cotton Suttrunjee, 6 × 3 feet.

Subsequent supply.

- 1 English Blanket as above, triennially.
- 1 Suttrunjee, triennially.
- 1 Cotton Sheet, annually.
- 2. The colour of the Blankets issued to Barracks and Hospitals will be different, brown being adopted for the former, and white for the latter.
- 3. When Trestle Cots are used by British Troops, the following articles will be issued for each Cot by the Barrack Department as Government property, and the Commanding Officers to whom the issues have been made will be responsible that the articles, which are expected to last for at least three years, are returned in fair condition to that Department:—

#### FOR EACH IRON BARRACK COT.

To be the property of Government.

- 2 Canvas Palliasse covers or cases.
- 2 Canvas Pillow cases.
- 1 Leather Strap, with buckle.

The stuffing for the palliasse cases and the pillow cases will be indented for and issued as "Petty Supplies" in the following proportions:—

For Stations in Bengal Proper.

Coir stuffing,—21½ lbs. per bed, to be cleaned, and thoroughly teased, and renewed as necessity may hereafter indicate.

4. At exceptionally cold stations, as on the Frontier or in the Hills, one or two extra Blankets will be issued by the Barrack Department in winter, not as Soldier's Bedding, but as articles of Barrack supply, provided the General Officer Commanding, and the Principal Medical Officer at the Station concerned, consider such extra issue necessary.

For all other Stations.

Straw stuffing,—24 lbs. per bed, to be renewed quarterly, the old straw being returned to the Commissariat Department.

19 F

The mattrasses and pillow cases to be washed quarterly under Regimental arrangements, by the men themselves, without any remuneration.

Twenty per cent. of brushes, scrubbing for the number of mattrasses in use, and ½ lb. English soap for each mattrass, &c. (the latter to be supplied quarterly), will be allowed by the State for the above purpose.

- 5. It must, however, be distinctly explained to the Soldier that all extra supplies of Bedding are to be considered Government property, for which he will be held personally responsible.
- 6. On the return of the hot season such articles as may be in the Soldier's possession must be returned into Regimental Store for eventual transfer to the Barrack Department for safe custody and re-issue when wanted.
- 7. To avoid any misunderstanding and references in future on the subject, the miscellaneous supplies of Bedding will, as recapitulated below, consist of:—

I .- To Recruits on landing.

1 Blanket.

1 Suttrunjee.

The remaining articles on joining their Corps.

II.—To Non-Commissioned Officers returning from Furlough.

The same as for Recruits on landing.

III.-Warrant Officers.

Not entitled to Bedding.

IV .- Non-Commissioned Officers on the Unattached List.

Entitled to Bedding irrespective of the amount of their pay.

V.-Wives of Soldiers residing in Barracks.

Entitled to Cots and Bedding of the same description as their husbands.

VI.-Wives of Non-Commissioned Officers on the Unattached List.

Entitled to Bedding when the husband's Staff salary does not exceed Rs. 20 per mensem.

VII.—Regiments arriving in India.

Entitled to be supplied with the first issue of full Bedding, but if arriving late in the season, the ordinary annual supply will not be issued in addition thereto, unless certified by a Committee to be absolutely necessary.

VIII.—Men transferred from one Regiment to another.

Entitled to the Bedding issuable, after joining, to the Regiment to which transferred, with retention of Bedding already in their possession.

IX.—Claims for Compensation.

If not submitted within 12 months to be forfeited.

X .- Widows in India.

Not entitled to Bedding.

(Signed) H. K. BURNE, Colonel,

Secretary to the Government of India."

G. G. O. No. 865 of 20th December 1871.

No. 865 of 1871.—In supersession of the decision notified in G. G. No. 746 of 1870,

Cavalry. Infantry.

Bhisties.... 7 10
Sweepers ... 7 10
Bildars ... 2 2 the Government of India has sanctioned a Conservancy
Establishment, on the scale shown in the margin, for all Regiments of British Cavalry and Infantry, irrespective of the description of barracks which they may occupy.

# CIRCULARS AND ORDERS OF THE GOVERNMENT OF INDIA IN THE PUBLIC WORKS DEPARTMENT, RELATING TO BARRACK AND HOSPITAL BUILDINGS.

ACCOMMODATION TO BE ALLOWED IN QUARTER GUARDS FOR EUROPEAN TEOOPS.

Circular No. 70 of 15th December 1870.

To

THE GOVERNMENTS OF MADEAS, BOMBAY, BENGAL, THE NORTH WESTERN PROVINCES AND THE PUNJAB; THE CHIEF COMMISSIONERS OF THE CENTRAL PROVINCES, OUDH, BRITISH BURMAH, AND MYSORE AND COORG; THE RESIDENT AT HYDERABAD; THE AGENTS TO THE GOVERNOR GENERAL FOR CENTRAL INDIA AND RAJPOOTANA.

I am directed to forward for information and guidance, the annexed extract of a Memorandum from the Military Department, No. 1286, dated the 30th November last, prescribing a reduced scale of accommodation for quarter-guards of British Troops in supersession of that published with this Office Circular No. 17, dated the 18th February 1867.

I have, &c.
(Signed) W. A. CROMMELIN, Colonel, R. E.
Offg. Secy. to the Govt. of India.

#### Enclosure to Circular No. 70, Public Works.

Extract para. 2 from a Memorandum No. 1286, dated 30th November 1870, from the Secretary to the Government of India, Military Department, to the Secretary to the Government of India, Public Works Department.

Para 2. His Excellency in Council, in concurrence with the Right Honourable the Commander-in Chief, is of opinion that a reduction is necessary in the accommodation supplied on the standard plan for Regimental quarter-guards, and has decided that it should be reduced from the existing scale to the following, vis:—

,	Ordinary Guard.	Lock-up Room.	Cells.	Night Stable Picquet.
For a Battery of Artillery*	6 men and 1 Non-Commissioned Officer	6 men.	3 men.	3 men and 1 Non-Com- missioned Officer.
	Officers	12 ,	6 "	12 men, including Non- Commissioned Offi-
" Head Quarters Wing of			İ	cers.
Cavalry	12 Ditto ditto 12 Ditto ditto	6 ,,	4 ,,	7 Ditto ditto.
" Detached Wing of Cavarly	12 Ditto ditto	6 "	4 ,,	7 Ditto ditto.
,, Regiment of Infantry, Head Quarters Wing of	18 Ditto ditto	20 "	10 ,,	·
Infantry		12 ,,	6 ,,	
" Detached Wing of Infantry .		12 ,,	6 ,,	

<sup>\*</sup> When two or more Batteries are located at the same Station, the extent of accommodation may be rather less in proportion than the above detail for a single Battery.

OPEN OUTLETS AND SPOUTS FOR CARRYING OFF RAIN-WATER FROM ROOFS OF BARRACKS AND OTHER LARGE BUILDINGS.

Circular No. 71 of 15th December 1870.

To

THE GOVERNMENTS OF MADRAS, BOMBAY, BENGAL, THE NORTH WESTERN PROVINCES, AND THE PUNJAB; THE CHIEF COMMISSIONERS OF OUDH, CENTRAL PROVINCES, BRITISH Burman, and Mysore and Coorg; the Resident at Hyderabad; and the AGENTS TO THE GOVERNOR GENERAL FOR CENTRAL INDIA AND RAJPOOTANA.

SIR,—Several instances have come to the notice of the Governor General in Council of the evil effects of the use of down-pipes, of iron or earthen-ware, to carry off rain-water from the roofs of barracks and other large buildings, owing to their becoming frequently choked with dirt, birds' nests, &c., and so leading to the risk of injury to the walls and roofs.

- This mode of discharging the rain-water is not well-suited to a country where the rain-fall, during a limited period, is often very great, and where, in consequence, it is desirable that every risk of impediment to the free discharge of an exceptional fall of rain should be avoided as much as possible.
- I am directed to suggest that the use of down-pipes may be discouraged; and that, as a rule, preference may be given to some arrangement which will ensure the free discharge of rain-water from the roofs, clear of the walls, and as directly as possible on to the ground, as, for example, by means of open outlets and spouts, or by a continuous drip over the eaves.

I have, &c.,

W. A. CROMMELIN, Colonel, R.E., Offg. Secretary to the Govt. of India.

PUBLIC QUARTERS FOR BAND MASTERS. Circular No. 73 of 29th December 1870.

Copy of the following forwarded to Local Governments and Administrations as noted Governments of Bengal, North Western Provinces, and the Punjab; Chief Commissioners of Oudh, Central Provinces, British Burmah, and Mysore and Coorg; Resident at Hyderabad; Agents to the Governor General for Central India and Rajpootana.

on the margin, for information and guidance, and to the Governments of Madras and Bombay, the Military Department, Adjutant General, and Quarter Master General, for information.

(By order)

(Signed)

W. A. CROMMELIN, Colonel, R.E., Depy. Secretary to the Govt. of India.

No. 595, dated 14th December 1870.

Office Memo. from-Colonel H. K. Burne, Secy. to the Govt. of India, Mily. Dept., -Secretary to the Government of India, P. W. Dept.

In reply to Public Works Department docket No. 1318 B-M, dated 2nd December 1870, the undersigned is directed to state that, in the opinion of the Government of India in the Military Department, Band Masters should always be provided with public quarters.

> RECESS SHELVES IN REGIMENTAL SCHOOLS. Circular, No. 4 of 1st February 1871.

To

THE GOVERNMENTS OF MADRAS, BOMBAY, BENGAL, THE NORTH WESTERN PROVINCES AND THE PUNJAB; THE CHIEF COMMISSIONERS OF OUDH, THE CENTRAL PROVINCES, BRITISH BURMAH, AND MYSORE AND COORG; THE RESIDENT AT HYDERABAD; AND THE AGENTS TO THE GOVERNOR GENERAL FOR CENTRAL INDIA AND RAJPOOTANA.

SIR,—The Military Department having decided that recess shelves should be provided in Regimental schools, I am directed to request, in continuation of this Office Circular No. 28 of the 19th April 1869, that in all schools which may be built in future for a Regiment of Cavalry or Infantry, or for a Head-quarters Brigade of Artillery, or Artillery Commands of two or more Batteries, a recess may be provided in the adult (and grown children's) school-room, and another in the infant school-room; each recess to be 7' × 4' (within) and from 13 to 15 inches deep, according to the thickness of wall.

- 2. In schools for detached Batteries, a recess in one room will suffice.
- 3. Similar recesses should be provided in such of the existing school buildings as will admit of their introduction without unduly weakening the walls.

I have, &c.,

(Signed) R. STRACHEY, Colonel, R.E.,

Offg. Secretary to the Govt. of India.

ORDERING PROVISION OF WIRE NETTING FOR UPPER WINDOWS OF HOSPITALS OF BRITISH TROOPS.

Circular No. 21 of 23rd May 1871.

To

THE GOVERNMENTS OF MADRAS, BOMBAY, BENGAL, THE NORTH-WESTERN PROVINCES AND THE PUNJAB IN THE PUBLIC WORKS DEPARTMENT; THE CHIEF COMMISSIONERS OF OUDH, CENTRAL PROVINCES, AND BRITISH BURMAH; THE RESIDENT AT HYDERABAD; THE AGENTS OF THE GOVERNOR GENERAL FOR CENTRAL INDIA AND RAJPOOTANA, AND THE SUPERINTENDENT OF PORT BLAIR.

SIR,—In continuation of Public Works Department Circular No. 36, dated 4th July 1870, I am directed to state that the Governor General in Council is pleased to authorize the provision of Wire-netting or other suitable open screen to the upper windows of Hospitals of British Troops, where they are recommended by the local Medical and Military authorities, the cost of the same having been ascertained to be moderate.

I have, &c.,

(Signed) R. B. PEMBERTON, Captain, R.E.,

Assistant Secretary to the Government of India.

Accommodation to be provided in Quarter Guards for British Troops at Hill Stations.

Circular No. 22 of 26th May 1871.

To

THE GOVERNMENTS OF MADRAS, BOMBAY, BENGAL, THE NORTH WESTERN PROVINCES AND THE PUNJAB, IN THE PUBLIC WORKS DEPARTMENT; THE CHIEF COMMISSIONERS OF OUDH, THE CENTRAL PROVINCES, AND BRITISH BURMAH; THE RESIDENT AT HYDERABAD; THE AGENTS OF THE GOVERNOR GENERAL FOR CENTRAL INDIA AND RAJPOOTANA; AND THE SUPERINTENDENT OF PORT BLAIR.

Adverting to Public Works Department Circular No. 70, dated 15th December 1870, fixing a reduced scale of accommodation for Quarter Guards of British Troops in the plains, the Governor General in Council is pleased to direct that the same scale shall be applicable to British Troops located in all hill stations, with the following modifications:—

The floor space to be only 60 square feet per man, and the height to be 12 feet to wall-plate.

The size of the cells is to be that fixed for the prison at Raneekhet, viz.,  $10' \times 10'$  with a height of 13 feet.

(Signed) R. B. PEMBERTON, Captain, R.E.,

Assistant Secretary to the Government of India.

## Armourers' Shop for a Regiment of British Cavalry or Infantry.

Circular No. 27 of 17th June 1871.

To

THE SECRETARIES TO THE GOVERNMENTS OF MADRAS, BOMBAY, BENGAL, THE NORTH-WESTERN PROVINCES, AND THE PUNJAB IN THE PUBLIC WORKS DEPARTMENT; THE CHIEF COMMISSIONERS OF OUDH, THE CENTRAL PROVINCES, AND BRITISH BURMAH; THE RESIDENT AT HYDERABAD; THE AGENTS TO THE GOVERNOR GENERAL FOR CENTRAL INDIA AND RAJPOOTANA; AND THE SUPERINTENDENT OF PORT BLAIR.

SIE,—In continuation of Public Works Department Circular No. 6, dated 1st February 1865, forwarding for guidance, a standard plan of an Armourer's shop for a Regiment of British Cavalry or Infantry in the plains, I am directed to state that the Government of India in the Military Department has decided, in communication with the Right Honourable the Commander-in-Chief, that for a wing of a regiment accommodation precisely similar to that authorized for an entire regiment is necessary.

- 2. It has also been decided that for regiments in the hills, the interior accommodation afforded by the standard plan should be provided; but that the east and west verandahs might be altogether dispensed with, the height of the main room reduced from 16 to 12 feet, and that of the side rooms from 10 to 9 feet.
- 3. For Hill Convalescent Depôts, where the established strength consists of 500 men exclusive of Non-Commissioned Officers, the following modifications of the standard plan have been approved, viz.:—
  - 1st.—Size of main room to be reduced from  $30 \times 24$  to  $20 \times 15$  feet. The work-table to be still to the north, and to run along the breadth of the room.
  - 2nd.—East and west verandahs may either be dispensed with altogether, or, at any rate, considerably reduced in dimensions.
  - 3rd.—Forge room to be also proportionately reduced.
  - 4th.—A place for storing wood and other fuel, and a drying room, with trough, &c., to be provided.
  - 5th.—All sanctioned fittings, as specified on the standard plan above referred to, to be supplied; but the arm racks to be reduced to 50 feet.
- 4. This Circular is in supersession of Public Works Department Circular No. 49, dated 1st June 1868, which should be removed from Office files.

I have, &c.,

(Signed) C. W. HUTCHINSON, Colonel, R.E., Offg. Depy. Secy. to the Govt. of India.
